MITSUBISHI ELECTRIC

Programmable Controller

MELSEC iQ-F series

MELSEC iQ-F FX5
Motion Module/
Simple Motion Module
Function Block Reference

CONTENTS

1 List of FBs

This FB list is for using the MELSEC iQ-F series Simple Motion module/Motion module.

○: Supported, ×: Not supported

Name	Description	FX-SSC-S	FX-SSC-G
M+FX5SSC_SetPositioningData	Sets positioning data (Da.1 to Da.4, Da.6 to Da.10, Da.20 to Da.22).	○	○
M+FX5SSC_StartPositioning	Starts the positioning operation.	○	○
M+FX5SSC_JOG	Performs the JOG operation or inching operation.	○	○
M+FX5SSC_MPG	Performs the manual pulse generator operation.	○	○
M+FX5SSC_ChangeSpeed	Changes the speed.	○	○
M+FX5SSC_ChangeAccDecTime	Changes the acceleration/deceleration time at a speed change.	○	○
M+FX5SSC_ChangePosition	Changes the target position.	○	○
M+FX5SSC_Restart	Restarts the axis being stopped.	○	○
M+FX5SSC_OperateError	Monitors errors and warnings, and resets errors.	○	○
M+FX5SSC_InitializeParameter	Initializes the parameter.	○	○
M+FX5SSC_WriteFlash	Writes the parameter, positioning data, and block start data in the buffer memory to the flash ROM.	○	○
M+FX5SSC_ChangeServoParameter	Changes the servo parameter after the servo amplifier is activated.	○	×
M+FX5SSC_ChangeTorqueControlMode	Activates the torque control mode.	○	○
M+FX5SSC_ChangeSpeedControlMode	Activates the speed control mode.	○	○
M+FX5SSC_ChangePositionControlMode	Activates the position control mode.	○	○
M+FX5SSC_ChangeContinuousTorqueMode	Activates the continuous operation to torque control mode.	○	○
M+FX5SSC_Sync	Starts and ends the synchronous control.	○	○
M+FX5SSC_ChangeSyncEncoderPosition	Changes the synchronous encoder axis current value and synchronous encoder axis current value per cycle.	○	○
M+FX5SSC_DisableSyncEncoder	Disables inputs from the synchronous encoder axis.	○	○
M+FX5SSC_EnableSyncEncoder	Enables inputs from the synchronous encoder axis.	○	○
M+FX5SSC_ResetSyncEncoderError	Reads error information from the synchronous encoder axis, and resets the error.	○	○
M+FX5SSC_ConnectSyncEncoder	Connects a synchronous encoder via CPU.	○	○
M+FX5SSC_MoveCamReferencePosition	Adds the movement amount set in the synchronous control change value to the cam reference position to move the cam reference position.	○	○
M+FX5SSC_ChangeCamPositionPerCycle	Changes the cam axis current value per cycle to a synchronous control change value.	○	○
M+FX5SSC_ChangeMainShaftGearPositionPerCycle	Changes the current value per cycle after main shaft gear to a synchronous control change value.	○	○
M+FX5SSC_ChangeAuxiliaryShaftGearPositionPerCycle	Changes the current value per cycle after auxiliary shaft gear to a synchronous control change value.	○	○
M+FX5SSC_MoveCamPositionPerCycle	Adds the movement amount set in the synchronous control change value to a cam axis current value per cycle to move the cam axis current value per cycle.	○	○
M+FX5SSC_MakeRotaryCutterCam	Automatically generates the cam for a rotary cutter.	○	○
M+FX5SSC_CalcCamCommandPosition	Calculates a cam axis feed current value, and outputs the calculation result.	○	○
M+FX5SSC_CalcCamPositionPerCycle	Calculates a cam axis current value per cycle, and outputs the calculation result.	○	○
M+FX5SSC_ReadWriteParameter	Reads and writes objects of the slave device.	×	○

MEMO

2 Simple Motion Module FB/Motion Module FB

2.1 M+FX5SSC_SetPositioningData

Name

M+FX5SSC_SetPositioningData

Overview

Item	Description
Function overview	Sets positioning data (Da.1 to Da.4, Da.6 to Da.10, Da.20 to Da.22).
Symbol	

Labels

■Input labels

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Simple Motion module/Motion module.
(3)	i_uAxis	Target axis	Word [unsigned]	1 to 8	Specify the axis No. The setting range differs depending on the module used.
(4)	i_uDataNo	Positioning data No.	Word [unsigned]	1 to 100	Specify the positioning data No.

■Output labels

| No.	Variable name	Name	Data type	Default value	Description
(5)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(6)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that setting the positioning data has been completed.
(7)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(8)	o_uErrId	Error code	Word [unsigned]	0	The error code generated in the FB is stored.

■Disclosed labels

Variable name	Name	Data type	Setting range	Description
pb_uOpePattern	Da.1: Operation pattern	Word [unsigned]	0: Positioning complete 1: Continuous positioning control 3: Continuous path control	Specify whether positioning of a certain data No. is to be ended with just that data, or whether the positioning for the next data No. is to be carried out in succession.
pb_uCtrlSys	Da.2: Control method	Word [unsigned]	01H: ABS Linear 1 02H: INC Linear 1 03H: Feed 1 04H: FWD V1 05H: RVS V1 06H: FWD V/P 07H: RVS V/P 08H: FWD P/V 09H: RVS P/V 0AH: ABS Linear 2 0BH: INC Linear 2 0CH: Feed 2 0DH: ABS ArcMP 0EH: INC ArcMP 0FH: ABS ArcRGT 10H: ABS ArcLFT 11H: INC ArcRGT 12H: INC ArcLFT 13H: FWD V2 14H: RVS V2 15H: ABS Linear 3 16H: INC Linear 3 17H: Feed 3 18H: FWD V3 19H: RVS V3 1AH: ABS Linear 4 1BH: INC Linear 4 1CH: Feed 4 1DH: FWD V4 1EH: RVS V4 80H: NOP 81H: Address CHG 82H: JUMP 83H: LOOP 84H: LEND	Sets the control system for positioning control.
pb_uAccTimeNo	Da.3: Acceleration time No.	Word [unsigned]	0: Acceleration time 0 1: Acceleration time 1 2: Acceleration time 2 3: Acceleration time 3	Set any of the acceleration time 0 to 3 as the acceleration time for positioning.
pb_uDecTimeNo	Da.4: Deceleration time No.	Word [unsigned]	0: Deceleration time 0 1: Deceleration time 1 2: Deceleration time 2 3: Deceleration time 3	Set any of the deceleration time 0 to 3 as the deceleration time for positioning.
pb_uInterpolatedAxNo1	Da.20: Axis to be interpolated No.1	Word [unsigned]	0H: Axis 1 selected 1H: Axis 2 selected 2H: Axis 3 selected 3H: Axis 4 selected 4H: Axis 5 selected 5H: Axis 6 selected 6H: Axis 7 selected 7H: Axis 8 selected	Set the axis to be interpolated (interpolation axis) to execute the 2- to 4-axis interpolation operation.
pb_uInterpolatedAxNo2	Da.21: Axis to be interpolated No.2	Word [unsigned]	0H: Axis 1 selected 1H: Axis 2 selected 2H: Axis 3 selected 3H: Axis 4 selected 4H: Axis 5 selected 5H: Axis 6 selected 6H: Axis 7 selected 7H: Axis 8 selected	Set the axis to be interpolated (interpolation axis) to execute the 3- and 4-axis interpolation operation.

Variable name	Name	Data type	Setting range	Description
pb_uInterpolatedAxNo3	Da.22: Axis to be interpolated No.3	Word [unsigned]	0H: Axis 1 selected 1H: Axis 2 selected 2H: Axis 3 selected 3H: Axis 4 selected 4H: Axis 5 selected 5H: Axis 6 selected 6H: Axis 7 selected 7H: Axis 8 selected	Set the axis to be interpolated (interpolation axis) to execute the 4-axis interpolation operation.
pb_uMcode	Da.10: M code	Word [unsigned]	Da.2: Control method = 82H: JUMP instruction • 0 to 10 Da.2: Control method = 83H: LOOP • 1 to 65535 Da.2: Control method = Other than the above • 0 to 65535	Set an "M code", a "condition data No.", or the "Number of LOOP to LEND repetitions" corresponding to the "Da.2: Control method".
pb_uDwellTime	Da.9: Dwell time	Word [unsigned]	Da.2: Control method = 82H: JUMP instruction • 1 to 600 Da.2: Control method = 82H: Other than JUMP instruction • 0 to 65535	Set the "dwell time" or "positioning data No." corresponding to the "Da.2: Control method".
pb_udCmdSpd	Da.8: Command speed	Double word [signed]	Pr.1: Unit setting = 0, 1, 2 • 1 to 2000000000 Pr.1: Unit setting = 3 • 1 to 1000000000 FFFFFFFFH: Current speed (Speed set for the previous positioning data No.)	Set the command speed for positioning.
pb_dPositAdr	Da.6: Positioning address	Double word [signed]	Pr.1: Unit setting = 0, 1, 3 • Da.2: Control method = 06H to 09H: 0 to 2147483647 • Da.2: Control method = Other than 06H to 09H:- 2147483648 to 2147483647 Pr.1: Unit setting = 2 • Da.2: Control method = 01H, 0AH, 15H, 1AH, 81H, 20H, 22H, 23H: 0 to 35999999 • Da.2: Control method = 02H, 0BH, 16H, 1BH, 03H, 0CH, 17H, 1CH, 20H, 22H, 23H: -2147483648 to 2147483647 • Da.2: Control method = 06H, 07H: 0 to 2147483647 (INC mode), 0 to 35999999 (ABS mode) • Da.2: Control method = 08H, 09H: 0 to 2147483647	Set the address to be used as the target value for positioning control.
pb_dArcAdr	Da.7: Arc address	Double word [signed]	-2147483648 to 2147483647	This data is required only when performing circular interpolation control.

FB details

Item		Description
Applicable hardware and software	Applicable module	FX5-40SSC-S, FX5-80SSC-S, FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-S: GX Works3 (Version 1.010L or later) FX5-80SSC-S: GX Works3 (Version 1.030G or later) FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language		Ladder
Number of steps (maximum)		311 steps
Function description		• By turning ON i_bEN (Execution command), the set positioning data is written to the buffer memory. • When the setting value of the target axis is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 100 (Hexadecimal) is stored in o_uErrId (Error code). • When the setting value of the positioning data No. is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 101 (Hexadecimal) is stored in o_uErrId (Error code).
Compiling method		Macro type
FB operation type		Pulsed execution (single scan execution type)

Item	Description
Timing chart	**[When operation completes without an error]** i_bEN (Execution command) o_bENO (Execution status) Positioning data setting processing No processing Write No processing o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) 0 **[When an error occurs]** i_bEN (Execution command) o_bENO (Execution status) Positioning data setting processing No processing o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) 0 Error code 0
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • Ensure that i_bEN (Execution command) is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine and FOR-NEXT loop because i_bEN (Execution command) cannot be turned OFF. • When this FB is used twice or more, precaution must be taken to avoid repetition of the target axis. • Every input must be provided with a value for proper FB operation.

Error codes

Error code	Description	Action
100 (Hexadecimal)	The setting value of i_uAxis (Target axis) is out of the range. The target axis is not within the range of 1 to 8.	Please try again after confirming the setting.
101 (Hexadecimal)	The setting value of i_uDataNo (Positioning data No.) is out of the range. The positioning data No. is not within the range of 1 to 100.	Please try again after confirming the setting.

Version upgrade history

Version	Description
00A	First edition
01A	Add the 8-axis module for the applicable module. Extend the target axis and the axis to be interpolated into 8 axes.

2.2 M+FX5SSC_StartPositioning

Name

M+FX5SSC_StartPositioning

Overview

Item	Description
Function overview	Starts the positioning operation.
Symbol	

```
                        M+FX5SSC_StartPositioning

(1) ——— B : i_bEN                              o_bENO : B ——— (5)

(2) ——— DUT : i_stModule                        o_bOK : B ——— (6)

(3) ——— UW : i_uAxis                            o_bErr : B ——— (7)

Labels

■Input labels

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Simple Motion module/Motion module.
(3)	i_uAxis	Target axis	Word [unsigned]	1 to 8	Specify the axis No. The setting range differs depending on the module used.
(4)	i_uStartNo	Cd.3: Positioning start No.	Word [unsigned]	1 to 600: Positioning data No. 7000 to 7004: Block start designation 9001: Machine home position return 9002: Fast-home position return 9003: Current value changing 9004: Simultaneous starting of multiple axes	Set the positioning start No. corresponding to the control to be started in "Cd.3: Positioning start No."

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(5)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(6)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that executing this FB has been completed. However, this label does not turn ON when a module error occurs at the start.
(7)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(8)	o_uErrId	Error code	Word [unsigned]	0	The error code generated in the FB is stored.

FB details

Item	Description	
Applicable hardware and software	Applicable module	FX5-40SSC-S, FX5-80SSC-S, FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-S: GX Works3 (Version 1.010L or later) FX5-80SSC-S: GX Works3 (Version 1.030G or later) FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language	Ladder	
Number of steps (maximum)	497 steps	
Function description	• By turning ON i_bEN (Execution command), the control corresponding to i_uStartNo (Cd.3: Positioning start No.) is started. • This FB is activated by turning ON the positioning start signal. • Only when the conditions are met, the positioning start signal is turned ON by turning ON i_bEN (Execution command). The conditions are the following: READY signal is ON, positioning start signal is OFF, start complete signal is OFF, and BUSY signal is OFF. If any of the conditions is not met, the error code 200 (hexadecimal) is stored in o_uErrId (Error code). • When the start complete signal is turned ON or i_bEN (Execution command) is turned OFF, the positioning start signal is turned OFF. • When the setting value of the target axis is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 100 (Hexadecimal) is stored in o_uErrId (Error code). • When the setting value of the positioning start No. is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 102 (Hexadecimal) is stored in o_uErrId (Error code).	
Compiling method	Macro type	
FB operation type	Pulsed execution (multiple scan execution type)	
Timing chart	[When operation completes without an error] i_bEN (Execution command) o_bENO (Execution status) Parameter writing processing — No processing / Write / No processing Positioning start signal o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) — 0 [When an error occurs] i_bEN (Execution command) o_bENO (Execution status) Parameter writing processing — No processing Positioning start signal o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) — 0 / Error code / 0	

Item	Description
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • Ensure that i_bEN (Execution command) is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine and FOR-NEXT loop because i_bEN (Execution command) cannot be turned OFF. • This FB turns ON and OFF the positioning start signal. Thus, do not operate the positioning start signal by the other means while being executed. • When this FB is used twice or more, create an interlock to prevent the FBs from being activated at the same time. • When this FB is used twice or more, precaution must be taken to avoid repetition of the target axis. • This FB does not set the data when started. Data required for controlling the start No. must be set on the parameter or buffer memory. • Every input must be provided with a value for proper FB operation.

Error codes

Error code	Description	Action
100 (Hexadecimal)	The setting value of i_uAxis (Target axis) is out of the range. The target axis is not within the range of 1 to 8.	Please try again after confirming the setting.
102 (Hexadecimal)	The setting value of i_uStartNo (Cd.3: Positioning start No.) is out of the range. The positioning start No. is not within the range of 1 to 600, 7000 to 7004, and 9001 to 9004.	Please try again after confirming the setting.
200 (Hexadecimal)	The condition for positioning start is not met. Any of the following conditions is not met. • READY signal: On • Positioning start signal: Off • Start complete signal: Off • BUSY signal: Off	Execute the FB when all of the following conditions are met. • READY signal: On • Positioning start signal: Off • Start complete signal: Off • BUSY signal: Off

Version upgrade history

Version	Description
00A	First edition
01A	Add the 8-axis module for the applicable module. Extend the target axis into 8 axes.

2.3 M+FX5SSC_JOG

Name

M+FX5SSC_JOG

Overview

Item	Description
Function overview	Performs the JOG operation or inching operation.
Symbol	

```
                        M+FX5SSC_JOG
(1) ──── B : i_bEN                        o_bENO : B ──── (8)

Labels

■Input labels

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Simple Motion module/Motion module.
(3)	i_uAxis	Target axis	Word [unsigned]	1 to 8	Specify the axis No. The setting range differs depending on the module used.
(4)	i_bFJog	Forward run JOG command	Bit	ON, OFF	Turn ON this label when performing the forward run JOG operation or forward run inching operation.
(5)	i_bRJog	Reverse run JOG command	Bit	ON, OFF	Turn ON this label when performing the reverse run JOG operation or reverse run inching operation.
(6)	i_udJogSpeed	Cd.17: JOG speed	Double word [unsigned]	Pr.1: Unit setting = mm/inch/degree[*1] • 1 to 2000000000[*2] Pr.1: Unit setting = pulse • 1 to 1000000000	Specify the JOG speed. For inching operation, set 0.
(7)	i_uInching	Cd.16: Inching movement amount	Word [unsigned]	0 to 65535 0: JOG operation (0 to 32767: Set by decimal number. 32768 to 65535: Convert the number to hexadecimal number and set.)	Specify the inching movement amount. For JOG operation, set 0.

*1 When "Pr.1: Unit setting" is set to "degree" and "Pr.83: Speed control 10 × multiplier setting for degree axis" is valid, the value is set as 10 times of setting value.
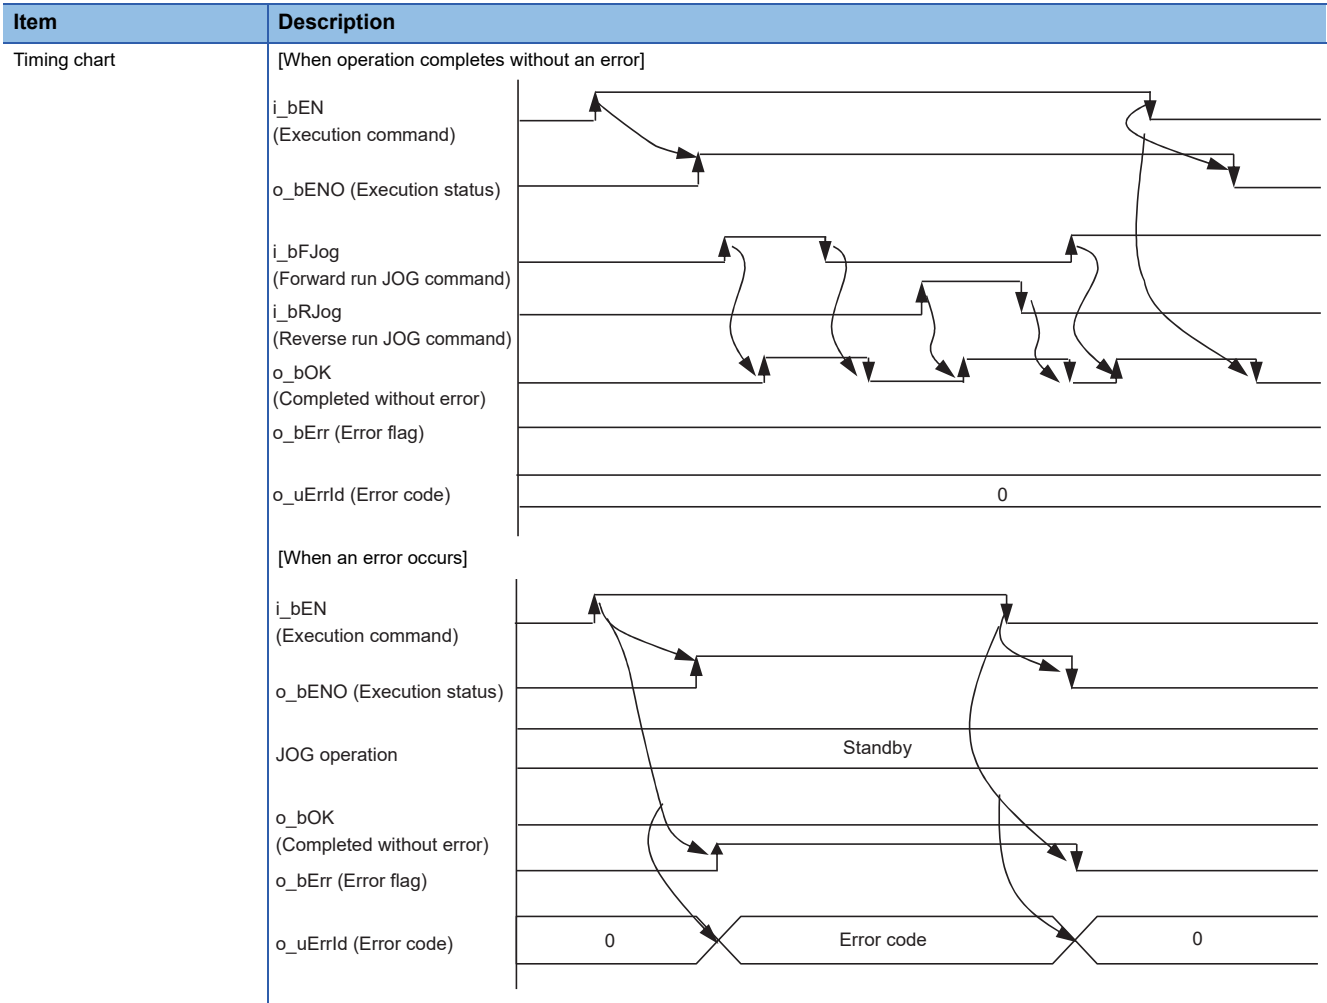

*2 The value is set corresponding to the setting of "Pr.1: Unit setting".

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(8)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(9)	o_bOK	Completed without error	Bit	OFF	ON: The JOG command is ON. OFF: The JOG command is OFF.
(10)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(11)	o_uErrId	Error code	Word [unsigned]	0	The generated error code in the FB is stored.

FB details

Item		Description
Applicable hardware and software	Applicable module	FX5-40SSC-S, FX5-80SSC-S, FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-S: GX Works3 (Version 1.010L or later) FX5-80SSC-S: GX Works3 (Version 1.030G or later) FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language		Ladder
Number of steps (maximum)		447 steps
Function description		• By turning ON i_bFJog (Forward run JOG command) or i_bRJog (Reverse run JOG command) after i_bEN (Execution command) is turned ON, the JOG operation or inching operation is performed. • When i_bFJog (Forward run JOG command) and i_bRJog (Reverse run JOG command) are ON at the same time, the operation stops. • When i_bEN (Execution command) is turned OFF from ON during operation that has been started by i_bFJog (Forward run JOG command) or i_bRJog (Reverse run JOG command), the operation stops. • When i_bRJog (Reverse run JOG command) is turned ON during forward run JOG operation, the operation stops. However, when i_bRJog (Reverse run JOG command) is turned OFF from ON, the forward run JOG operation restarts. (This relation is also applied to the reverse run JOG operation and i_bFJog (Forward run JOG command). • When the setting value of the target axis is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 100 (Hexadecimal) is stored in o_uErrId (Error code).
Compiling method		Macro type
FB operation type		Real-time execution

Item	Description
Timing chart	[When operation completes without an error] i_bEN (Execution command) o_bENO (Execution status) i_bFJog (Forward run JOG command) i_bRJog (Reverse run JOG command) o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) ... 0 [When an error occurs] i_bEN (Execution command) o_bENO (Execution status) JOG operation ... Standby o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) ... 0 / Error code / 0
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • Ensure that i_bEN (Execution command) is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine and FOR-NEXT loop because i_bEN (Execution command) cannot be turned OFF. • This FB turns ON and OFF the forward run JOG start signal (Cd.181) or reverse run JOG start signal (Cd.182). Thus, do not turn ON or OFF the forward run JOG start signal (Cd.181) or reverse run JOG start signal (Cd.182) by the other means while this FB is being executed. • When this FB is used twice or more or other FB that operates the same as the signal this FB does, create an interlock to prevent the FBs from being activated at the same time. • When this FB is used twice or more, precaution must be taken to avoid repetition of the target axis. • Setting a large value for the JOG speed from the beginning is dangerous. For the safety, set a small value first, and increase the value gradually while checking the operation to determine the value optimal for the control. • When values other than 0 are set in both i_uInching (Cd.16: Inching movement amount) and i_udJogSpeed (Cd.17: JOG speed), inching operation is performed. • Every input must be provided with a value for proper FB operation.

Error codes

| Error code	Description	Action
100 (Hexadecimal)	The setting value of i_uAxis (Target axis) is out of the range. The target axis is not within the range of 1 to 8.	Please try again after confirming the setting. (Turn OFF the forward run JOG command or reverse run JOG command, turn ON i_bEN from OFF, and turn ON the forward run JOG command or reverse run JOG command again.)

Version upgrade history

Version	Description
00A	First edition
01A	Add the 8-axis module for the applicable module. Extend the target axis into 8 axes.

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Simple Motion module/Motion module.
(3)	i_uAxis	Target axis	Word [unsigned]	1 to 8	Specify the axis No. The setting range differs depending on the module used.
(4)	i_udMPGInputMagnification	Cd.20: Manual pulse generator 1 pulse input magnification	Double word [unsigned]	1 to 10000	Set the input magnification of the manual pulse generator 1 pulse. When the setting value is 0, the magnification is 1. When the setting value is 10,001 or higher, the magnification is 10,000.

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(5)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(6)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that the manual pulse generator operation has been enabled.
(7)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(8)	o_uErrId	Error code	Word [unsigned]	0	The error code generated in the FB is stored.

FB details

Item	Description	
Applicable hardware and software	Applicable module	FX5-40SSC-S, FX5-80SSC-S, FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-S: GX Works3 (Version 1.010L or later) FX5-80SSC-S: GX Works3 (Version 1.030G or later) FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language	Ladder	
Number of steps (maximum)	305 steps	
Function description	• By turning ON or OFF i_bEN (Execution command), manual pulse generator operation is enabled or disabled. • This FB is constantly executed after i_bEN (Execution command) is turned ON. • The workpiece moves according to the pulses input from the manual pulse generator while o_bOK (Completed without error) is ON. • When the setting value of the target axis is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 100 (Hexadecimal) is stored in o_uErrId (Error code).	
Compiling method	Macro type	
FB operation type	Real-time execution	
Timing chart	[When operation completes without an error] i_bEN (Execution command) o_bENO (Execution status) o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) 0 [When an error occurs] i_bEN (Execution command) o_bENO (Execution status) o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) 0 Error code 0	
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • Ensure that i_bEN (Execution command) is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine and FOR-NEXT loop because i_bEN (Execution command) cannot be turned OFF. • Do not change i_uAxis (Target axis) while i_bEN (Execution command) is ON. • When this FB is used twice or more, precaution must be taken to avoid repetition of the target axis. • Every input must be provided with a value for proper FB operation.	

Error codes

Error code	Description	Action
100 (Hexadecimal)	The setting value of i_uAxis (Target axis) is out of the range. The target axis is not within the range of 1 to 8.	Please try again after confirming the setting.

Version upgrade history

Version	Description
00A	First edition
01A	Add the 8-axis module for the applicable module. Extend the target axis into 8 axes.

2.5 M+FX5SSC_ChangeSpeed

Name

M+FX5SSC_ChangeSpeed

Overview

Item	Description
Function overview	Changes the speed.
Symbol	

```
                    M+FX5SSC_ChangeSpeed
(1) ——— B : i_bEN                          o_bENO : B ——— (5)

(2) ——— DUT : i_stModule                   o_bOK : B ——— (6)

(3) ——— UW : i_uAxis                       o_bErr : B ——— (7)

Item	Description	
Applicable hardware and software	Applicable module	FX5-40SSC-S, FX5-80SSC-S, FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-S: GX Works3 (Version 1.010L or later) FX5-80SSC-S: GX Works3 (Version 1.030G or later) FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language	Ladder	
Number of steps (maximum)	396 steps	
Function description	• By turning ON i_bEN (Execution command), errors of the target axis are monitored. • When a module error occurs, an error code is stored in o_uModuleErrId (Axis error code). • After i_bEN (Execution command) is turned ON, the generated error is reset by turning ON i_bErrReset (Error reset command). • When a warning occurs in the module, the warning can be reset by turning ON i_bErrReset (Error reset command). • When the setting value of the target axis is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 100 (Hexadecimal) is stored in o_uErrId (Error code).	
Compiling method	Macro type	
FB operation type	Real-time execution	

Item	Description
Timing chart	[When operation completes without an error] i_bEN (Execution command) o_bENO (Execution status) i_bErrReset (Error reset command) Axis error reset 0 1 0 Error detection signal o_bModuleErr (Axis error detection) o_uModuleErrId (Axis error code) 0 Error code 0 o_bModuleWarn (Axis warning detection) o_uModuleWarnId (Axis warning code) 0 Warning code 0 o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) 0 [When an error occurs] i_bEN (Execution command) o_bENO (Execution status) i_bErrReset (Error reset command) Axis error reset 0 Error detection signal o_bModuleErr (Axis error detection) o_uModuleErrId (Axis error code) 0 o_bModuleWarn (Axis warning detection) o_uModuleWarnId (Axis warning code) 0 o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) 0 Error code 0
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • Ensure that i_bEN (Execution command) is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine and FOR-NEXT loop because i_bEN (Execution command) cannot be turned OFF. • When this FB is used twice or more, precaution must be taken to avoid repetition of the target axis. • Do not change i_uAxis (Target axis) while i_bEN (Execution command) is ON. • Every input must be provided with a value for proper FB operation.

Error codes

Error code	Description	Action
100 (Hexadecimal)	The setting value of i_uAxis (Target axis) is out of the range. The target axis is not within the range of 1 to 8.	Please try again after confirming the setting.

2

Version upgrade history

Version	Description
00A	First edition
01A	Add the 8-axis module for the applicable module. Extend the target axis into 8 axes.

Labels

■Input labels

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Simple Motion module/Motion module.
(3)	i_uAxis	Target axis	Word [unsigned]	1 to 8	Specify the axis No. The setting range differs depending on the module used.

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(4)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(5)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that changing to the positioning control mode has been completed.
(6)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(7)	o_uErrId	Error code	Word [unsigned]	0	The error code generated in the FB is stored.

FB details

Item	Description	
Applicable hardware and software	Applicable module	FX5-40SSC-S, FX5-80SSC-S, FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-S: GX Works3 (Version 1.010L or later) FX5-80SSC-S: GX Works3 (Version 1.030G or later) FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language	Ladder	
Number of steps (maximum)	419 steps	
Function description	• By turning ON i_bEN (Execution command), the position control mode is activated for the specified axis. • When this FB is executed during position control, the execution is completed without any processing. • When the setting value of the target axis is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 100 (Hexadecimal) is stored in o_uErrId (Error code).	
Compiling method	Macro type	
FB operation type	Pulsed execution (multiple scan execution type)	
Timing chart	[When operation completes without an error] [When an error occurs] 	
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • Ensure that i_bEN (Execution command) is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine and FOR-NEXT loop because i_bEN (Execution command) cannot be turned OFF. • When this FB is used twice or more, precaution must be taken to avoid repetition of the target axis. • Every input must be provided with a value for proper FB operation. • When this FB fails switching the mode, o_bOK (Completed without error) does not turn ON.	

Error codes

Error code	Description	Action
100 (Hexadecimal)	The setting value of i_uAxis (Target axis) is out of the range. The target axis is not within the range of 1 to 8.	Please try again after confirming the setting.

Version upgrade history

Version	Description
00A	First edition
01A	Add the 8-axis module for the applicable module. Extend the target axis into 8 axes.

2.16 M+FX5SSC_ChangeContinuousTorqueMode

Name

M+FX5SSC_ChangeContinuousTorqueMode

Overview

Item	Description
Function overview	Activates the continuous operation to torque control mode.
Symbol

Labels

■Input labels

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Simple Motion module/Motion module.
(3)	i_uAxis	Target axis	Word [unsigned]	1 to 8	Specify the axis No. The setting range differs depending on the module used.
(4)	i_dSpeedLimit	Cd.147: Speed limit value at continuous operation to torque control mode	Double word [signed]	Pr.1: Unit setting = mm/inch/degree[*1] • -2000000000 to 2000000000[*2] Pr.1: Unit setting = pulse • -1000000000 to 1000000000	Set the speed limit value at continuous operation to torque control mode.
(5)	i_uSpeedAccelerationTime	Cd.148: Acceleration time at continuous operation to torque control mode	Word [unsigned]	0 to 65535 (0 to 32767: Set by decimal number. 32768 to 65535: Convert the number to hexadecimal number and set.)	Set the acceleration time at continuous operation to torque control mode.
(6)	i_uSpeedDecelerationTime	Cd.149: Deceleration time at continuous operation to torque control mode	Word [unsigned]	0 to 65535 (0 to 32767: Set by decimal number. 32768 to 65535: Convert the number to hexadecimal number and set.)	Set the deceleration time at continuous operation to torque control mode.
(7)	i_wCommandTorque	Cd.150: Target torque at continuous operation to torque control mode	Word [signed]	-10000 to 10000	Set the target torque at continuous operation to torque control mode.
(8)	i_uTorqueTimeConstDrivingMode	Cd.151: Torque time constant at continuous operation to torque control mode (Forward direction)	Word [unsigned]	0 to 65535 (0 to 32767: Set by decimal number. 32768 to 65535: Convert the number to hexadecimal number and set.)	Set the time constant for the driving at continuous operation to torque control mode.
(9)	i_uTorqueTimeConstRegenerativeMode	Cd.152: Torque time constant at continuous operation to torque control mode (Negative direction)	Word [unsigned]	0 to 65535 (0 to 32767: Set by decimal number. 32768 to 65535: Convert the number to hexadecimal number and set.)	Set the time constant for the regeneration at continuous operation to torque control mode.
(10)	i_uAutoSwitchingMode	Cd.153: Control mode auto-shift selection	Word [unsigned]	0 to 2	Set the switching condition of the control mode to switch to continuous operation to torque control mode.
(11)	i_dAutoSwitchingParameter	Cd.154: Control mode auto-shift parameter	Double word [signed]	Pr.1: Unit setting = mm/inch • -2147483648 to 2147483647[*2] Pr.1: Unit setting = degree • 0 to 35999999[*2] Pr.1: Unit setting = pulse • -2147483648 to 2147483647	Set the condition value when the control mode auto-shift selection is set to 1 or 2.

*1   When "Pr.1: Unit setting" is set to "degree" and "Pr.83: Speed control 10 × multiplier setting for degree axis" is valid, the value is set as 10 times of setting value.
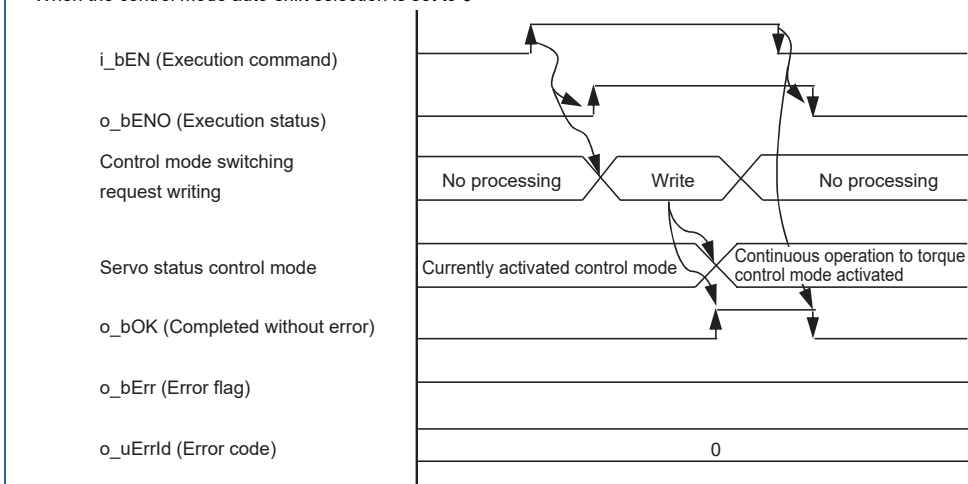

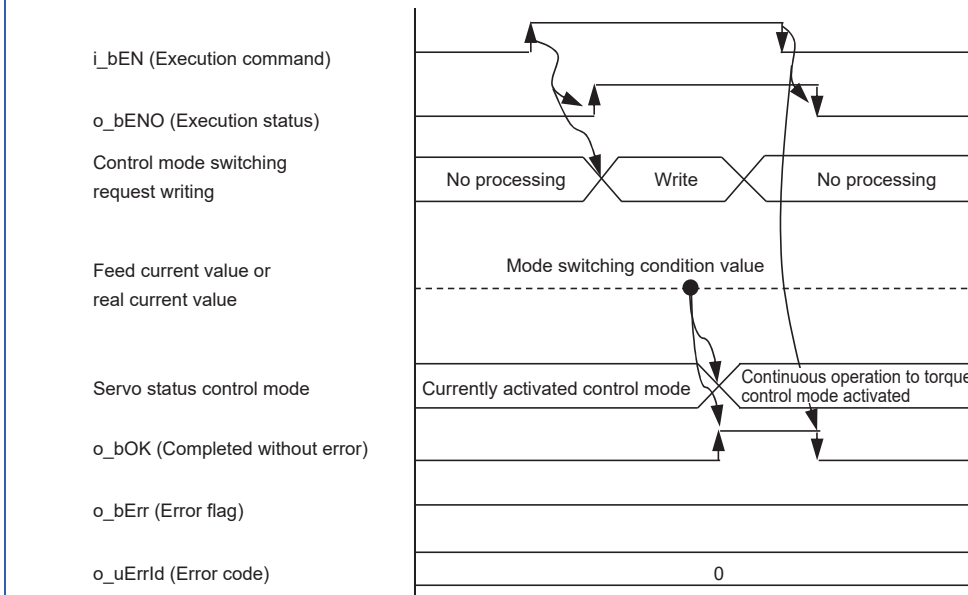

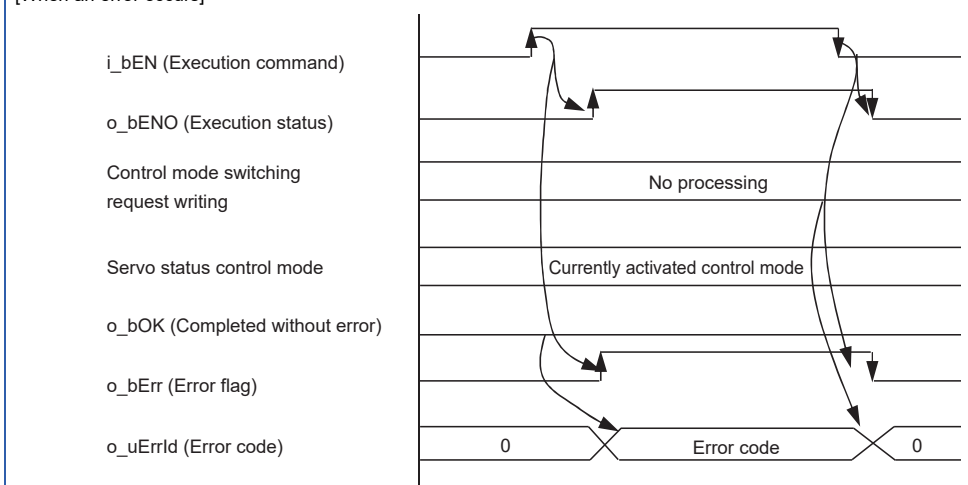

*2   The value is set corresponding to the setting of "Pr.1: Unit setting".

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(12)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(13)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that changing to the continuous operation to torque control mode has been completed.
(14)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(15)	o_uErrId	Error code	Word [unsigned]	0	The error code generated in the FB is stored.

(3)	i_uSyncEncAxis	Synchronous encoder axis No.	Word [unsigned]	1 to 4: Synchronous encoder axis No.	Set the synchronous encoder axis No. whose inputs are to be enabled.
(4)	i_uStartControl	Cd.320: Synchronous encoder axis control start	Word [unsigned]	1: Start for synchronous encoder axis control 101 to 108: High-speed input start for synchronous encoder axis control (axis 1 to axis 8)	When 1 is set, synchronous encoder axis control is started. When 101 to 108 is set, the synchronous encoder axis control starts based on the high-speed input request (external command signal). The setting range differs depending on the module used.

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(5)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(6)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that enabling the synchronous encoder axis counter has been completed.
(7)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(8)	o_uErrId	Error code	Word [unsigned]	0	The error code generated in the FB is stored.

FB details

Item	Description	
Applicable hardware and software	Applicable module	FX5-40SSC-S, FX5-80SSC-S, FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-S: GX Works3 (Version 1.010L or later) FX5-80SSC-S: GX Works3 (Version 1.030G or later) FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language	Ladder	
Number of steps (maximum)	216 steps	
Function description	• The operation method differs depending on the setting value of the synchronous encoder axis control start. When the setting value is 1, the synchronous encoder axis counter is enabled by turning ON i_bEN (Execution command). When the setting value is 101 to 108, the synchronous encoder axis counter is enabled by the high speed input request [DI] after i_bEN (Execution command) is turned ON. • When the setting value of the synchronous encoder axis No. is out of the range, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 100 (Hexadecimal) is stored in o_uErrId (Error code). • When this FB is executed for the synchronous encoder axis for which the synchronous encoder axis enabled flag is OFF, o_bErr (Error flag) turns ON, the FB processing is interrupted, and the error code 301 (Hexadecimal) is stored in o_uErrId (Error code).	
Compiling method	Macro type	
FB operation type	Pulsed execution (single scan execution type)	
Timing chart	[When operation completes without an error] [When an error occurs] 	
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • When this FB is used twice or more, precaution must be taken to avoid repetition of the synchronous encoder axis No. • Every input must be provided with a value for proper FB operation.	

Error codes

Error code	Description	Action
100 (Hexadecimal)	The synchronous encoder axis No. is not within the setting range.	Please try again after confirming the setting.
301 (Hexadecimal)	The synchronous encoder axis enabled flag of the synchronous encoder axis No. is OFF.	Execute the FB again after turning ON the synchronous encoder axis setting enabled flag.

Compiling method		Macro type
FB operation type		Pulsed execution (multiple scan execution type)
Timing chart		[When operation completes without an error] [When an error occurs]
Restrictions and precautions		• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • The FB cannot be used in an interrupt program. • When this FB is used twice or more, precaution must be taken to avoid repetition of the output axis No. • If this FB is used together with other synchronous control change FBs that have the same output axis No., secure one operation cycle or more after o_bOK (Completed without error) of this FB turns ON and before the FBs are executed. • Every input must be provided with a value for proper FB operation.

Error codes

Error code	Description	Action
100 (Hexadecimal)	The output axis No. is not within the setting range.	Please try again after confirming the setting.
300 (Hexadecimal)	The FB is executed for the output axis No. with which synchronous control is not executed.	Please try again after confirming the setting.

Version upgrade history

Version	Description
00A	First edition
01A	Add the 8-axis module for the applicable module. Extend the output axis No. into 8 axes.

2.26 M+FX5SSC_ChangeAuxiliaryShaftGearPositionPerCycle

Name

M+FX5SSC_ChangeAuxiliaryShaftGearPositionPerCycle

Overview

Item	Description
Function overview	Changes the current value per cycle after auxiliary shaft gear to a synchronous control change value.
Symbol	

```
                    M+FX5SSC_ChangeAuxiliaryShaftGearPositionPerCycle
(1) ──── B : i_bEN                                    o_bENO : B ──── (5)
(2) ──── DUT : i_stModule                             o_bOK : B ──── (6)
(3) ──── UW : i_uOutputAxis                           o_bErr : B ──── (7)
(4) ──── D : i_dSyncCtrlChangeValue                   o_uErrId : UW ──── (8)
```

Labels

■Input labels

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Simple Motion module/Motion module.
(3)	i_uOutputAxis	Output axis No.	Word [unsigned]	1 to 8	Set the axis No. whose current value per cycle after auxiliary shaft gear is to be changed. The setting range differs depending on the module used.
(4)	i_dSyncCtrlChangeValue	Cd.408: Synchronous control change value	Double word [signed]	-2147483648 to 2147483647[*1][*2]	Set the current value per cycle after auxiliary shaft gear to be changed. The setting value is converted within the range from 0 to (Cam axis length per cycle - 1).

[*1] The output axis position unit is set to the value corresponding to the setting of "Pr.1: Unit setting" and the cam axis cycle unit is set to the value corresponding to the setting of "Pr.438: Cam axis cycle unit setting".

[*2] The setting range is the same even if the unit differs.

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(5)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(6)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that changing the current value per cycle after auxiliary shaft gear has been completed.
(7)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(8)	o_uErrId	Error code	Word [unsigned]	0	The error code generated in the FB is stored.

No.	Variable name	Name	Data type	Setting range	Description
(1)	i_bEN	Execution command	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
(2)	i_stModule	Module label	Structure	The setting range differs depending on the module label.	Specify the module label of the MELSEC iQ-F Motion module.
(3)	i_uAxis	Target axis	Word [unsigned]	1 to 8	Specify the axis No.[1]
(4)	i_udSDONumber	Cd.512: Optional SDO 1	Double word [signed]	10000H to FFFFFFFFH	Specify the object to perform servo transient transmission.[2]
(5)	i_uSDORequest	Cd.160: Command send request 1	Double word [unsigned]	1, 11	Request the servo transient transmission.[2] 1: Individual read request 2: Individual write request

*1 The setting range differs depending on the module used.

*2 For details, refer to "Servo Transient Transmission Function [FX5-SSC-G]" in the following manual.
☞ MELSEC iQ-F FX5 Motion Module/Simple Motion Module User's Manual (Application)

■Output labels

No.	Variable name	Name	Data type	Default value	Description
(6)	o_bENO	Execution status	Bit	OFF	ON: The execution command is ON. OFF: The execution command is OFF.
(7)	o_bOK	Completed without error	Bit	OFF	When ON, it indicates that calculating the cam axis current value per cycle has been completed.
(8)	o_udSDOErrorID	SDO transfer result	Double word [unsigned]	0	Returns the error code of the error that occurred in the SDO communication.[*1]
(9)	o_uSDOStatus	SDO transfer status	Double word [unsigned]	0	Stores the processing status of the transient requests.[*1]
(10)	o_bErr	Error flag	Bit	OFF	When ON, it indicates that an error has occurred in the FB.
(11)	o_uErrId	Error code	Word [unsigned]	0	Returns the error code of the error that occurred in the FB.

*1 For details, refer to "Servo Transient Transmission Function [FX5-SSC-G]" in the following manual.
☞ MELSEC iQ-F FX5 Motion Module/Simple Motion Module User's Manual (Application)

■Disclosed labels
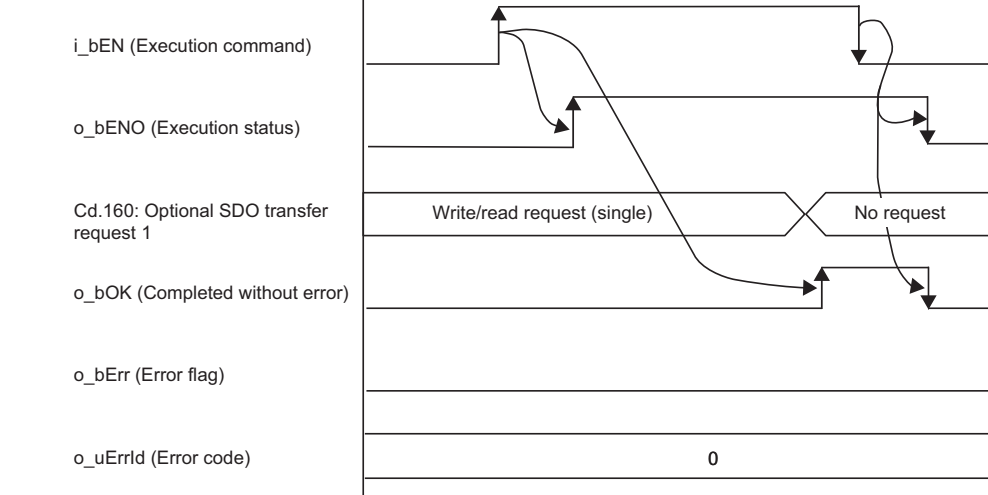

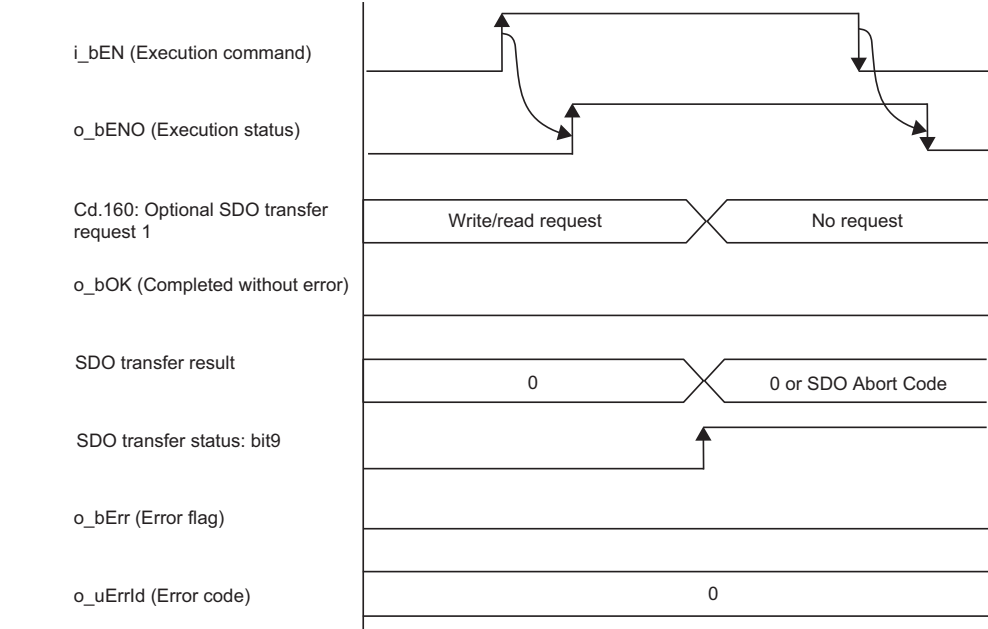

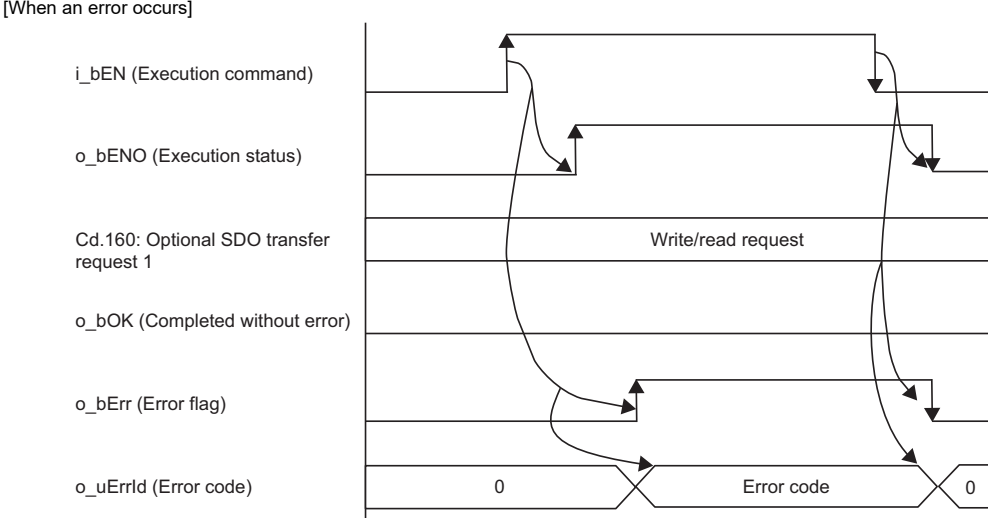

Variable name	Name	Data type	Setting range	Description
pb_u4SDOData	Cd.164: Optional SDO transfer data 1	Word [unsigned] (0...3)	—	When reading an object, stores the read value. Specify the data to write when writing an object.[*1]

*1 For details, refer to "Servo Transient Transmission Function [FX5-SSC-G]" in the following manual.
☞ MELSEC iQ-F FX5 Motion Module/Simple Motion Module User's Manual (Application)

FB details

Item	Description	
Applicable hardware and software	Applicable module	FX5-40SSC-G, FX5-80SSC-G
	Applicable CPU	MELSEC iQ-F series
	Applicable engineering software	FX5-40SSC-G/FX5-80SSC-G: GX Works3 (Version 1.072A or later)
Programming language	Ladder	
Number of steps (maximum)	556 steps	
Function description	By turning ON i_bEN (Execution command), reads and writes objects of the slave device.	
Compiling method	Macro type	
FB operation type	Pulsed execution (multiple scan execution type)	

Item	Description
Timing chart	**[When operation completes without an error]** i_bEN (Execution command) o_bENO (Execution status) Cd.160: Optional SDO transfer request 1 — Write/read request (single) / No request o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) — 0 **[When a communication error is detected]** i_bEN (Execution command) o_bENO (Execution status) Cd.160: Optional SDO transfer request 1 — Write/read request / No request o_bOK (Completed without error) SDO transfer result — 0 / 0 or SDO Abort Code SDO transfer status: bit9 o_bErr (Error flag) o_uErrId (Error code) — 0 **[When an error occurs]** i_bEN (Execution command) o_bENO (Execution status) Cd.160: Optional SDO transfer request 1 — Write/read request o_bOK (Completed without error) o_bErr (Error flag) o_uErrId (Error code) — 0 / Error code / 0

Item	Description
Restrictions and precautions	• The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. • When i_bEN (Execution command) is turned OFF during a continuous write, the continuous write operation is stopped. • The FB cannot be used in an interrupt program. • Ensure that i_bEN (Execution command) is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine and FOR-NEXT loop because i_bEN (Execution command) cannot be turned OFF. • When this FB is used twice or more, precaution must be taken to avoid repetition of the target axis. • Every input must be provided with a value for proper FB operation. • Before using this FB, make sure that communication with the servo amplifier is established. • The setting items and range differ depending on the module used in the system.

Error codes

Error code	Description	Action
100 (Hexadecimal)	The setting value of i_uAxis (Target axis) is out of the range. The target axis is not within the range of 1 to 8.	Please try again after confirming the setting.
