

Numerical Control (CNC)

Macro Function Manual

NC Designer2

Introduction

This instruction manual describes how to use the macro function of NC Designer2. Incorrect handling may lead to unforeseen accidents, so make sure to read this instruction manual thoroughly before operation to ensure correct usage.

NC Designer2 supports the following NC series. Some of the functions are not adapted to the NC Designer2, depending on its series.

Supported models	Abbreviations in this manual
M800VW (Windows-based display unit)	M800VW/M80VW (Windows-based display unit)
M80VW (Windows-based display unit)	
M800W (Windows-based display unit)	M800/M80 (Windows-based display unit)
M80W (Windows-based display unit)	
M800VW (Windows-less display unit)	M800VW/M80VW (Windows-less display unit)
M800VS	
M80VW (Windows-less display unit)	
M80V	
M800W (Windows-less display unit)	M800/M80 (Windows-less display unit)
M800S	
M80W (Windows-less display unit)	
M80	
E80	
M700VW	M700VW
M700VS	M700VS/M70V/E70
M70V	
E70	

Notes on Reading This Manual

- (1) For the specifications of individual machine tools, refer to the manuals issued by the respective machine tool builders. The "restrictions" and "available functions" described by the machine tool builders have precedence over this manual.
- (2) This manual describes as many special operations as possible, but it should be kept in mind that operations not mentioned in this manual cannot be performed.

In this manual, the following abbreviations might be used.

MTB: Machine tool builder

Precautions for Safety

Always read the specifications issued by the machine tool builder, this manual, related manuals and attached documents before installation, operation, programming, maintenance or inspection to ensure correct use. Understand this numerical controller, safety items and cautions before using the unit. This manual ranks the safety precautions into "DANGER", "WARNING" and "CAUTION".

DANGER

When the user may be subject to imminent fatalities or major injuries if handling is mistaken.

WARNING

When the user may be subject to fatalities or major injuries if handling is mistaken.

CAUTION

When the user may be subject to injuries or when property damage may occur if handling is mistaken.

The following signs indicate prohibition and compulsory.

This sign indicates prohibited behavior (must not do).

For example,  indicates "Keep fire away".

This sign indicated a thing that is pompously (must do).

For example,  indicates "it must be grounded".

The meaning of each pictorial sign is as follows.

 CAUTION	 CAUTION rotated object	 CAUTION HOT	 Danger Electric shock risk	 Danger explosive
 Prohibited	 Disassembly is prohibited	 KEEP FIRE AWAY	 General instruction	 Earth ground

Note that even items ranked as " **CAUTION**", may lead to major results depending on the situation. In any case, important information that must always be observed is described.

DANGER

Not applicable in this manual.

WARNING

Not applicable in this manual.

CAUTION

1. Items related to product and manual

-  If the descriptions relating to the "restrictions" and "allowable conditions" conflict between this manual and the machine tool builder's instruction manual, the latter has priority over the former.
-  The operations to which no reference is made in this manual should be considered impossible.
-  This manual is compiled on the assumption that your machine is provided with all optional functions. Confirm the functions available for your machine before proceeding to operation by referring to the specification issued by the machine tool builder.
-  In some NC system versions, there may be cases that different pictures appear on the screen, the machine operates in a different way on some function is not activated.
-  To protect the availability, integrity and confidentiality of the NC system against cyber-attacks including unauthorized access, denial-of-service (Dos) (*1) attack, and computer virus from external sources via a network, take security measures such as firewall, VPN, and anti-virus software.
(*1) Denial-of-service (Dos) refers to a type of cyber-attack that disrupts services by overloading the system or by exploiting a vulnerability of the system.
-  Mitsubishi Electric assumes no responsibility for any problems caused to the NC system by any type of cyber-attacks including DoS attack, unauthorized access and computer virus.

Trademarks

MELDAS, MELSEC, EZSocket, EZMotion, iQ Platform, MELSOFT, GOT, CC-Link, CC-Link/LT and CC-Link IE are either trademarks or registered trademarks of Mitsubishi Electric Corporation in Japan and/or other countries.

Ethernet is a registered trademark of Xerox Corporation in the United States and/or other countries.

TRELLIX is a registered trademark or a trademark of Musarubra US LLC or its subsidiaries in the United States and other countries.

Microsoft and Windows are either trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.

CompactFlash and CF are either trademarks or registered trademarks of SanDisk Corporation in the United States and/or other countries.

SD Logos are trademarks or registered trademarks of SD-3C, LLC in the United States, other countries or both.

Wind River Systems, Inc., VxWorks and Tornado are either trademarks or registered trademarks of Wind River Systems, Inc. in the United States and/or other countries.

Other company and product names that appear in this manual are trademarks or registered trademarks of the respective companies.

1. What Is the Macro Function?

The macro function allows you to execute various processes during operation of a control according to processes described in the macro program. Because control processes are described on NC Designer2 with the macro language, those who are unfamiliar with C++ language programming can add control processes easily. The macro includes two variations: "project macro" specified for the project and "screen macro" specified for controls on the screen.

2. Macro Execution Conditions

The macro includes two types: "project macro" specified for the project and "screen macro" specified for screens. In this section, the macro execution conditions and timing are described.

2.1 Project Macro Execution Condition

The project macro is executed repetitively while the application window is open. The execution conditions of the project macro are specified below.

Macro execution condition	Description
Launch of application window	The macro starts when the application window is launched, and it is executed repetitively until the application window is closed.

2.2 Screen Macro Execution Condition

The screen macro is specified for controls existing on the screen. Execution of a screen macro corresponds to the callback function of the control. That is, the event held by each control is the execution condition of the macro.

Macro execution condition	Description
OnKeyPress	Executed after the key is pressed. Each control parts can acquire the key event only when focus is active.
OnKeyRelease	Executed after the key is released. Each control parts can acquire the key event only when focus is active.
OnPress	Executed after the mouse or another pointing device is pressed.
OnRelease	Executed after the mouse or another pointing device is released.
OnClick	Executed after the mouse or another pointing device is clicked. If the pointing device is released on the same control, execution follows OnRelease.
OnDraw	Executed after the image is drawn.
OnTimer	Executed after the timer event process is called.
OnSetFocus	Executed for the focus hits the control.
OnKillFocus	Executed after the focus moves apart from the control.
OnCreate	Executed after the page/control is generated.
OnDelete	Executed before the page/control is deleted.
OnUser	Executed after an original event of the user.
OnScroll	Executed after the scroll bar is clicked with the mouse or another pointing device.
OnScrollFinish	Executed after the caption character string has finished scrolling.
OnSelectChange	Executed when the selected line is changed in the list.
OnError	Executed after it fails to set the input contents in the control specified to reflect the INPUT.
OnUpperLimitOver	Executed when the result of accumulation is greater than the upper limit.
OnLowerLimitOver	Executed when the result of accumulation is less than the lower limit.
OnInit	Executed after all the objects on a page are generated when generating the page. This is not executed by changing the display status.
OnQuit	Executed before all the objects on a page are deleted when deleting the page. This is not executed by changing the display status.

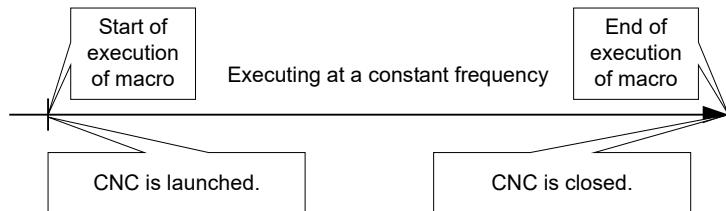

2. Macro Execution Conditions

The following shows the macro events available in each control.

2.3 Macro Execution Timing

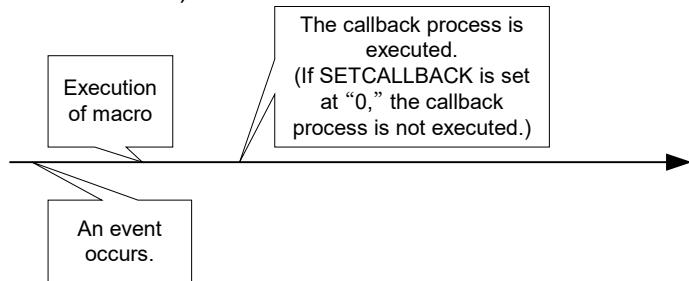

Project Macro

The starting and finishing timings of the project macro are shown below.

Screen Macro

The screen macro execution timing is the same as the execution timing of the callback function of each control. The callback function is executed after the macro is executed. Whether the callback process is executed or not after execution of the macro can be controlled with the macro command (SETCALLBACK).

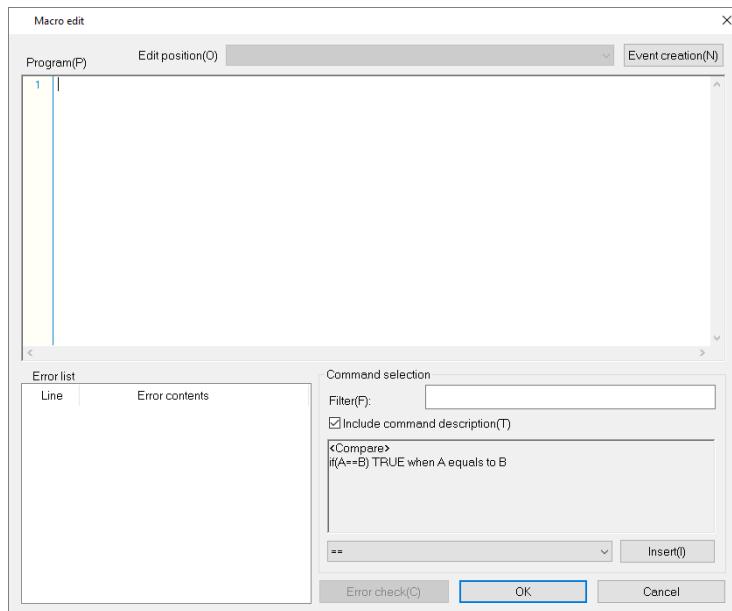

3. Macro Editing

3.1 Macro Editing

The procedure for registering or editing the project macro or screen macro is described here.

1. From the [Settings] menu, select [Project macro edit]/[Panel macro edit].
2. The "Macro edit" dialog box is displayed.

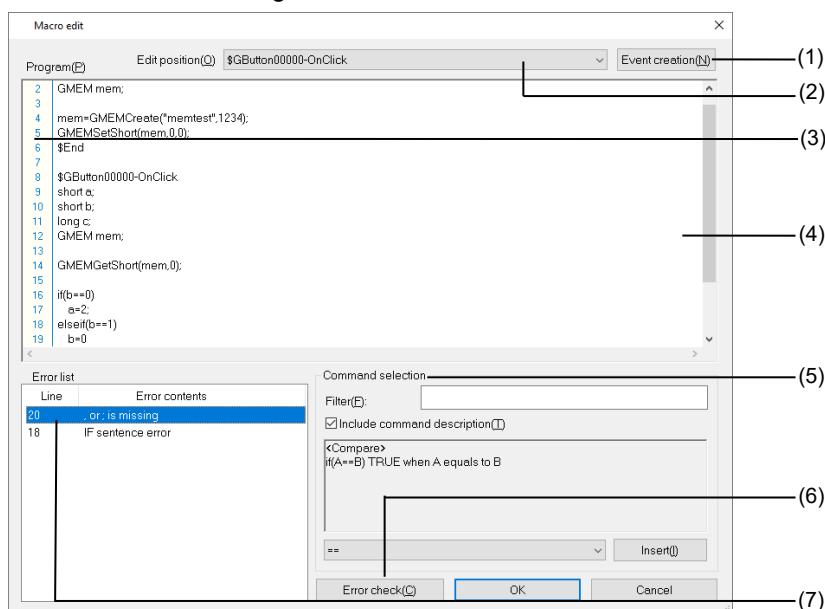

3. Write the program and click on the "OK" button to register the macro.

3. Macro Editing

3.2 Macro Editing Dialog Box

The "Macro Edit" dialog box is described.

No.	Item	Description								
(1)	Event creation	The "Event Creation" dialog box for adding an event in the program editing area is displayed. This part may not be operated when the project macro is edited.								
(2)	Edit position	A list of macro events is displayed. Select a desired event from the combo box to move the cursor to the editing position of the selected event. The events are displayed in the alphabetical order of the macro program header in the combo box.								
(3)	Row number	Indicates a row number.								
(4)	Program	Area for describing the macro program								
(5)	Command selection	<table border="1"> <tr> <td>Filter</td> <td>Input the keyword to use for filtering the commands to display in the [Command] combo box. A maximum of 10 keywords that contain 128 one-byte/two-byte characters can be input in the filter. A NOT search can be executed by adding "-" before the keyword. (Note) Refer to "NOTE" for details.</td> </tr> <tr> <td>Include command description</td> <td>Check here to include command descriptions in the filter. Uncheck here to filter by [Command] only.</td> </tr> <tr> <td>Command</td> <td>A command is selected from the combo box. Description about the selected command is displayed in the above field.</td> </tr> <tr> <td>[Insert] button</td> <td>Click on the [Insert] button to insert the selected command at the cursor in the program editing area.</td> </tr> </table>	Filter	Input the keyword to use for filtering the commands to display in the [Command] combo box. A maximum of 10 keywords that contain 128 one-byte/two-byte characters can be input in the filter. A NOT search can be executed by adding "-" before the keyword. (Note) Refer to "NOTE" for details.	Include command description	Check here to include command descriptions in the filter. Uncheck here to filter by [Command] only.	Command	A command is selected from the combo box. Description about the selected command is displayed in the above field.	[Insert] button	Click on the [Insert] button to insert the selected command at the cursor in the program editing area.
Filter	Input the keyword to use for filtering the commands to display in the [Command] combo box. A maximum of 10 keywords that contain 128 one-byte/two-byte characters can be input in the filter. A NOT search can be executed by adding "-" before the keyword. (Note) Refer to "NOTE" for details.									
Include command description	Check here to include command descriptions in the filter. Uncheck here to filter by [Command] only.									
Command	A command is selected from the combo box. Description about the selected command is displayed in the above field.									
[Insert] button	Click on the [Insert] button to insert the selected command at the cursor in the program editing area.									
(6)	Error check	Syntax errors in the program description are checked for.								
(7)	Error list	A list of detected errors is displayed. Double click on an error to move the cursor to the top of the corresponding line in the editing area.								

NOTE

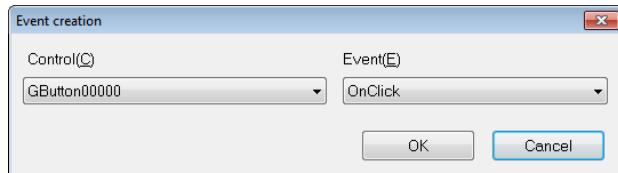

- ◆ Separate keywords with one-byte spaces when inputting multiple keywords in [Filter].
The 11th keyword and after are not included in the filter.

Example) Filtering the keyword "GCSButton Caption(" displays "GCSButtonSetCaption" and "GCSButtonGetCaption" in the [Command] combo box.

- ◆ The commands are filtered each time a keyword is input in [Filter].
- ◆ NOT search can be executed by adding "-" before the keyword. When there is a one-byte space between the keyword and "-", "-" is deemed to be a keyword.

3.3 Event Creation Dialog Box

Create the control event for which the macro program is described.

Item	Description
Control	A list of all controls existing in the corresponding screen is displayed. The control names are displayed in the alphabetical order in the combo box.
Event	A list of events that can be used for the selected control is displayed. The event names are displayed in the alphabetical order in the combo box.
OK	Insert the selected control name and event name to the cursor position in the program editing area of the macro editing dialog box and close the "Event creation" dialog box.

4. Macro Programming

The macro program describing method and programming language are described here.

4.1 Macro Editing Area

The following shows the maximum number of lines per screen that can be edited in the macro editing area, and the number of characters that can be displayed in one row.

Item	Description
Max. number of lines per screen	10000
Number of characters that can be displayed in one row	100 one-byte characters (Note)

(Note) If the number of characters exceeds the window width, the horizontal scroll bar appears.

When the macro editing dialog box is resized, the number of characters displayed in one row is also changed.

NOTE

- In the macro editing dialog box, copy, paste, cut, and undo (once only) are available with [Ctrl]+[C], [Ctrl]+[V], [Ctrl]+[X], and [Ctrl]+[Z] respectively.

The same operations are available from the pop-up menu displayed by right-clicking in the macro editing area.

4.2 Program Describing Method

Screen Macro

The configuration of the macro program for each event is specified below.

Item	Description
Header	Specify the control name and event name in the following format. \$control name - event name Example: \$GButton00000-OnClick
Main body of program	Describe the main body of the macro program.
Footer	\$End

Example:

```
$GButton00000-OnCreate
    GMEM mem;
    mem=GMEMCREATE("memetest",1234);
    GMEMsetshort(mem,0,0);
$End
```

...Header

...Main body of program

...Footer

NOTE

- To set the header and footer, use "Event Creation" dialog which is displayed by pressing [Event Creation] button in "Macro Edit" dialog.
- If it is set by the methods other than "Event Creation" dialog, the error check function for grammar may not operate properly.

Project Macro

The configuration of the macro program of the project macro is specified below.

Item	Description
Header	\$Project-OnCycle
Main body of program	Describe the main body of the macro program.
Footer	\$End

Example:

\$Project-OnCycle

...Header
...Main body of program
...Footer

\$End

Program Separation

Specify a semicolon (;) at the end of each command as a delimiter of the program. However, do not put a semicolon for IF(), ELSE, ELSEIF() and ENDIF. For FOR() and NEXT, the semicolon may not be put as far as no other command is specified in the same line.

Example:

```
IF(a==0)
    GCSTextboxSetString(-1,"GTextBox00001","000");
ELSEIF (a==1)
    GCSTextboxSetString(-1,"GTextBox00001","001");
ENDIF
```

Comment

To add a comment in the program, put a single quotation mark ('') at the top. The part between the single quotation mark and the end of the line is considered to be a comment.

Example:

```
$GButton00000-OnCreate  
GMEM mem;                                ' Comment  
mem=GMEMCREATE("memetest",1234);  
' Comment  
GMEMsetshort(mem,0,0);  
$End
```

Programming Language Description

Because the upper case and lower case characters are not separated for the programming language used in the macro program, you can specify the program either with the upper or lower case characters.

Mixture of upper and lower case characters is processed correctly.

Example:

- "GMEMCREATE" and "GMemCreate" are handled as the same function.
- "SHORT VAR_A" and "short var_a" are handled as the same variable.

Function Argument

Specify the constant or the variable as the argument.

Specify the variable which stores the return value to use the functions as the argument.

Example:

```
LONG IAddress;  
LONG IStatus;  
LONG IData;
```

- IAddress = ADR_MACHINE(1) | ADR_SYSTEM(1);
 IStatus = melSetData(IAddress, 127, 4, H1, IData) //Only the constant or the variable is specified.
 IStatus = melSetData(ADR_MACHINE(1) | ADR_SYSTEM(1), 127, 4, H1, IData); // The function is specified to the argument.

User Function

The macro programs that have the same processes can be put together as a user function.

The configuration of the user function is specified below.

Item	Description
Header	Specify the user function name and arguments in the following format. \$UserFunc User function name (Argument list) Example) \$UserFunc MyFunc(parm1,parm2,parm3)
Main body of program	Describe the main body of the macro program.
Footer	\$End

The user function call description is specified below.

UserFunc User function name (Argument list);

NOTE

- ◆ Use one-byte alphanumerical letters starting with a letter ("A" to "Z", "a" to "z") or an underscore ("_") to describe user function names. A maximum of 256 functions can be described for each project macro and screen macro.
 - ◆ Use one-byte alphanumerical letters starting with a letter ("A" to "Z", "a" to "z") or an underscore ("_") to describe user function arguments. A maximum of 31 arguments can be described.
 - ◆ Describe arguments with comma delimiters. Use parentheses when not using arguments.

Example: When using arguments	When not using arguments
\$UserFunc sub01(arg1,arg2,arg3)	\$UserFunc sub02()
UserFunc sub01(val1,val2,val3);	UserFunc sub02();

- ◆ "UserFunc" can be abbreviated as "UF".
"UserFunc" and "UF" can be used in descriptions at the same time.

Example:

```
$UserFunc sub03(arg1)    <- Defining side  
Uf sub03(1000);          <- Calling side
```

Do not use "UF" for a variable name when defining the user function.

- ◆ User function can be called from user function only once. Nested calling for three or more nests is not possible.
 - ◆ Descriptions after the right parenthesis in user function definitions are ignored.

Example: \$UserFunc sub03(parm) Message edit sub

"Message edit sub" after the right parenthesis is ignored.

4. Macro Programming

Example 1: Change the display of the text box according to a flag.

(a) When using "UserFunc"	(b) When using the abbreviation "UF"
<pre>\$UserFunc ExFnc01(str,blk) ' Set the display character string to the specified value GCSTextBoxSetString(-1,"GTextBox00001",str); ' Set the blink status to the specified value GCSSetBlinkEnableStatus(-1,"GTextBox00001",blk); \$End \$GButton00000-OnClick if (@1==0) ' "ON" display, blink status OFF UserFunc ExFnc01("ON",0); @1=1; else ' "OFF" display, blink status ON UserFunc ExFnc01("OFF",1); @1=0; endif \$End \$GButton00000-OnCreate @1=0; ' Initial display UserFunc ExFnc01("OFF",1); \$End</pre>	<pre>\$UF ExFnc01(str,blk) ' Set the display character string to the specified value GCSTextBoxSetString(-1,"GTextBox00001",str); ' Set the blink status to the specified value GCSSetBlinkEnableStatus(-1,"GTextBox00001",blk); \$End \$GButton00000-OnClick if (@1==0) ' "ON" display, blink status OFF UF ExFnc01("ON",0); @1=1; else ' "OFF" display, blink status ON UF ExFnc01("OFF",1); @1=0; endif \$End \$GButton00000-OnCreate @1=0; ' Initial display UF ExFnc01("OFF",1); \$End</pre>

Example 2: Display the character string comparison result in the text box.

(a) When storing the comparison result to an argument	(b) When storing the comparison result to a macro local variable
<pre>\$UserFunc TestCmp(str1,str2,Retc) ' Storing the comparison result to an argument Retc = strcmp(str1,str2); \$End \$GButton00000-OnClick STRING strCmp1; STRING strCmp2; LONG Result; strCmp1 = "ABC"; strCmp2 = "DEF"; UserFunc TestCmp(strCmp1,strCmp2,Result); ' Refer to the result stored to the argument if (Result==0) UserFunc SetStr("No difference"); else UserFunc SetStr("Different"); endif \$End \$UserFunc SetStr(s) GCSTextBoxSetString(-1,"GTextBox00001",s); \$End</pre>	<pre>\$UserFunc TestCmp(str1,str2) ' Storing the comparison result to a macro local variable Result = strcmp(str1,str2); \$End \$GButton00000-OnClick STRING strCmp1; STRING strCmp2; LONG Result; strCmp1 = "ABC"; strCmp2 = "ABC"; UserFunc TestCmp(strCmp1,strCmp2); ' Refer to the result stored to the macro local variable if (Result==0) UserFunc SetStr("No difference"); else UserFunc SetStr("Different"); endif \$End \$UserFunc SetStr(s) GCSTextBoxSetString(-1,"GTextBox00001",s); \$End</pre>

Example 3: Call a user function from a user function.

<pre>\$GButton00000-OnClick UserFunc Nest1Func(); \$End \$UserFunc Nest1Func() UserFunc SetStr("GTextBox00001","Nest1Func"); \$End \$UserFunc SetStr(obj,str) GCSTextBoxSetString(-1,obj,str); \$End</pre>	<p>Result 1, "Nest1Func" is displayed in "GTextBox00001".</p>
--	---

4.3 Programming Language

Variable

The variable that can be used in the macro program are specified below.

Item	Description
Macro local variable	Variable used in only one project macro or screen macro
Argument variable	Variable of a fixed name holding the argument data of the callback function
Macro reserved word variable	Variable used without declaring the type of variable
NC system variable	Variable that can read and write system variable for NC (#+variable No.)

Macro Local Variable

The macro local variable is a variable that can used in only one project macro or screen macro. Shown below is a list of allowable macro local variables.

Variable	Description
CHAR {local variable name};	Signed 8-bit integer type
SHORT {local variable name};	Signed 16-bit integer type
LONG {local variable name};	Signed 32-bit integer type
DOUBLE {local variable name};	Singed 64-bit floating point type
STRING {local variable name};	Character string type (256 + 1 bytes are occupied)
GMEM {local variable name};	Global memory area type

The describing method of the macro local variable is described below.

Item	Specification
Variable name	Describe with one-byte letters and numbers starting at a letter ('A' to 'Z' or 'a' to 'z') or underscore ('_') (max. 31 characters). The same variable name as the variable type (reserved word) may not be used. "UserFunc" cannot be used. Example: SHORT SHORT; ... Do not use. gmem userfunc ; ... Do not use.
Describing method	Describe in the following format: "(variable type) (variable name)". Example: SHORT VAR_A; Continuous definition with comma delimiter such as that used in the C++ language is not supported. Example: SHORT VAR_A, VAR_B; ... Do not use.
Allowable size	The local variables may use up to 32767 bytes in each event.

Macro Local Variable (specifying the array)

In M800V/M80V/M800/M80/E80 Series programs, macro local variable can be used to specify the array. The following is the local variables list that can be specified using the array.

Variables	Description
CHAR {local variable name} (no. of elements);	Signed 8bit integer type array
SHORT {local variable name} (no. of elements);	Signed 16bit integer type array
LONG {local variable name} (no. of elements);	Signed 32bit integer type array
DOUBLE {local variable name} (no. of elements);	Signed 64bit floating point type array
STRING {local variable name} (no. of elements);	Character string type array (256 + 1 bytes are occupied)

* Each element consumes the above written size out of the usable size (up to 32,767 bytes).

The following explains the description method of macro local variable (specifying the array).

Item	Specifications
Declaration	To designate an array, describe "variable type variable name (no. of elements)" Ex.: LONG VAR_A(10); Variable name is limited in the same way as the normal macro local variable. Designate the number of elements with the value at the declaration. The names same as other macro local variable names cannot be declared for array variable. <u>Up to 100 elements can be specified as the array variable.</u>
How to use	When the example above is declared, ten elements can be obtained. To access each element, designate among "variable name (0) to variable name (9)". Number of elements can be designated with local variable. Ex.: To use fifth element of array. VAR_B = VAR_A(4); Ex.: To designate array elements with local variable. VAR_B = VAR_A(VAR_C); Ex.: To designate the local variable with a designated element as an argument of function. (When acquiring single data) IStat = melGetData(IAddr, ISection, ISubSection, 1, VAR_A(4)); To designate the local variable for the argument of the function that acquires several data at a time, describe only the variable name. Ex.: To designate the array variable as an argument of the function. (When acquiring several data) IStat = melGetData(IAddr, ISection, ISubSection, 3, VAR_A);
Available size	Up to 32767 bytes are available in an event.

(Note) This can be used in only melGetData, melSetData, and melGetLumpData.

Global Memory Area

The macro local variable functions handling the global memory area are listed below.

Item	Specification
Memory area creation	GMEM variable = GMEMCREATE ({global area name}, {memory size});
Selection of previously created memory area	GMEM variable = GMEMSELECT ({global area name});
Acquisition of value from memory area CHAR	CHAR variable = GMEMGETCHAR({global area variable name}, {byte offset}); (The offset starts at "0".)
Acquisition of value from memory area SHORT	SHORT variable = GMEMGETSHORT({global area variable name}, {byte offset});
Acquisition of value from memory area LONG	LONG variable = GMEMGETLONG({global area variable name}, {byte offset});
Acquisition of value from memory area DOUBLE	DOUBLE variable = GMEMGETDOUBLE({global area variable name}, {byte offset});
Acquisition of value from memory area STRING	STRING variable = GMEMGetString({global area variable name}, {byte offset});
Entry of a value in memory area CHAR	GMEMSETCHAR ({global area variable name}, {byte offset}, {value});
Entry of a value in memory area SHORT	GMEMSETSHORT({global area variable name}, {byte offset}, {value});
Entry of a value in memory area LONG	GMEMSETLONG ({global area variable name}, {byte offset}, {value});
Entry of a value in memory area DOUBLE	GMEMSETDOUBLE ({global area variable name}, {byte offset}, {value});
Entry of a value in memory area STRING	GMEMSETSTRING({global area variable name}, {byte offset}, {value});
Memory area release	GMEMDELETE ({global area variable name});

Example:

```

GMEM M_ABC;
SHORT VAR_A;
M_ABC = GMEMCREATE("ABC", 1024);
(Hereinafter M_ABC is used as a global area type.)
' Write two bytes 123, starting at the fourth byte of ABC.
GMEMSETSHORT(M_ABC, 4, 123);
' Acquire two bytes from the fourth byte of ABC to VAR_A.
VAR_A = GMEMGETSHORT(M_ABC, 4);
GMEMDelete(M_ABC);
(Releasing global area M_ABC)

```

NOTE

- ◆ The global memory area can be created or used in the program after source code generation.

Argument Variable

The argument variable is a fixed-name variable that holds the argument data of the callback function. A list of argument variables and correspondence with the callback function argument are shown below.

Argument of callback function	Macro argument variable
unsigned short usMessage	USMESSAGE
long ILParam	LPARAM
long IUParam	LUPARAM

Macro reserved word variable

The macro reserved word variable can be used across all projects without declaring the type of variable. There is LONG type and DOUBLE type for the macro reserved word variable. As the macro reserved word variable is common across all projects, always initialize before use.

The below explains the macro reserved variable.

Macro reserved word variable	Explanation
@1 to @99	32bit integer type with a sign
#1 to #99	64bit floating decimal point type

The below explains how to define the macro reserved variable.

Item	Specification
Describing method	Describe the macro reserved word variable as a variable name in the form of "@" + Number or "#" + Number. Example:@1 = 10; #10 = 100.5;

NC system variable

NC system variable is a variable that can read/write to the system variable for NC.

(1) Undefined variable (#0)

Undefined variable is a variable that is always <empty>. No declaration of the variable type is required. It is used when inputting <empty> into the common variable of NC system variable and inputting "0" into the macro local variable.

NC system variable	Description
#0	<p>Only reading with 64bit floating decimal point type is enabled. Substituting a value to "#0" will cause a command error at error checking. When substituting "#0" into a common variable of NC system variable, it becomes <empty> value. When substituting "#0" into a macro local variable and macro reserved word variable, it becomes "0" if a variable is a integer type, and it become "0.0" if it is a floating decimal type.</p>

The below explains how to describe an undefined variable.

Item	Specification
Description method	Define "#0" as a variable name. Example: #1 = #0;

(Note 1) An <empty> will be handled as same as "0" in an arithmetic expression. Therefore, it will not be used as denominator for division. If it is used as denominator, a running macro will be interrupted because the expression will be treated as a division by 0.

Example:

```
#100 = #0 -----#100 = <empty>
#1 = #0; -----#1 = 0.0
@1 = #0; -----@1 = 0
#2 = #0 + 1; -----#2 = 1
@3 = 1 + #0; -----@3 = 1
#4 = #0 * 10; -----#4 = 0
#105 = #0 + #0; ----#105 = 0
#106 = 10 / #0; ----10 / 0 The macro will be interrupted at this line.
```

(Note 2) An <empty> will be handled as same as "0.0" in a conditional expression. However, when a common variable is compared, it will be different depending on the contents of common variable.

Example:

```
IF[#1 EQ #0] -----IF[#1 EQ 0.0]
IF[@1 EQ #0] -----IF[@1 EQ 0.0]
IF[#0 EQ 0.0] -----IF[0.0 EQ 0.0]
IF[#100 EQ #0] -----depending on the contents of "#100"
Refer to "Note 3" in "Conditional expression".
```

(Note 3) If an <empty> is designated to an argument of a function, it will be handled as same as "0.0". However, it will be handled as same as "0" if the type of argument is other than "double".

(2) Common variable

Common variable is a 64bit floating decimal type variable that can read/write to the common variable for NC. It can be used across all projects without declaring the type of variable. The number of variable sets that can be used will differ depending on NC specification (such as parameter setting). If unusable common variable is used, a running macro will be interrupted at the line where it is used.

NC system variable	Description
#100 to #199	Used as 1st part system common variables #100 to #199. These variables cannot handle the common variable #100 to #199 for the 2nd part system and the following. (Note1)
#100100 to #100199 #200100 to #200199 #300100 to #300199 #400100 to #400199 #500100 to #500199 #600100 to #600199 #700100 to #700199 #800100 to #800199	Used as variables for common variables #100 to #199. These variables can handle all of the common variables for all part systems. Common variables #100 to #199 by part system can be handled with "# + part system number * 100000 + variable No". The variables which exceed the valid part systems might become common variable shared among the part systems depending on the setting of "#1316 CrossCom". (Note 1)
#400 to #999	Used as variables for common variables "#400 to #999" shared among all part systems. Some or all of the variables from #500 to #900 might become common variables for each part system depending on the setting of "#1052 MemVal" and "#1304 V0comN". If "#1052 MemVal" is set to "1", these become variables to handle common variables #500 to #900 for 1st part system.
#100500 to #100999 #200500 to #200999 #300500 to #300999 #400500 to #400999 #500500 to #500999 #600500 to #600999 #700500 to #700999 #800500 to #800999	When NC parameter "#1052 MemVal" is set to "1", these are variables handling the common variable #500 to #999 for each part system set in "#1304 V0comV". The common variable #500 to #999 for each part system can be handled with "# + part system number * 100000 + variable No". These variables might become common variables shared among all part systems depending on the setting of "#1052 MemVal" and "#1304 V0comN". If a part system number exceeding the number of valid part systems is designated, a running macro will be interrupted at the line where it is designated.
#900000 to #907399	Used as variables for common variable #900000 to #907399 shared among all part systems.

(Note 1) These variables might become common variable shared among the part systems depending on the setting of "#1052 MemVal" and "#1303 V1comN".

The below shows the NC common variables which read and write by NC parameters when a macro is executed.

NC parameter setting		Macro program to run		
		#100 = 10;	#500 = 10;	#100999 = 10;
#1316 CrossCom	0	Write "10" to "#100" for 1st part system	Write "10" to "#500" that is common for part systems	Write "10" to "#999" that is common for part systems
#1052 MemVal	0			
#1316 CrossCom	0	Write "10" to "#100" that is common for part systems	Write "10" to "#500" that is common for part systems	Write "10" to "#999" for 1st part system
#1052 MemVal	1 (#1303 V1comN = 10 #1304 V0comN = 10)			
#1316 CrossCom	1	Write "10" to "#100" for 1st part system	Write "10" to "#500" that is common for part systems	Write "10" to "#100999" for 1st part system
#1052 MemVal	Setting invalid			

Parameter setting		Macro program to run		
		#200110 = 10;	#300520 = 10;	#500150 = 10;
#1316 CrossCom	0	Write "10" to "#110" for 2nd part system	Write "10" to "#520" that is common for part systems	The running macro is interrupted at this line.
#1052 MemVal	0			
#1316 CrossCom	0	Write "10" to "#110" for 2nd part system	Write "10" to "#520" for 3rd part system	The running macro is interrupted at this line.
#1052 MemVal	1 (#1303 V1comN = 10 #1304 V0comN = 10)			
#1316 CrossCom	1	Write "10" to "#200110" for 1st part system	Write "10" to "#520" that is common for part systems	Write "10" to "#500150" that is common for part systems
#1052 MemVal	Setting invalid			

(Note 1) When the parameter "#1316 CrossCom" is set to "0", NC will handle #100100 to #100110 as system variables for reading PLC data, but NC Designer2 will handle them as common variables for 1st part system.

(Note 2) Even if the data protection key 2 is valid, an error will not occur and a value can be written into NC common variable.

Constant

The constant that can be used in the macro program and its description method are specified below.

Item	Description
Decimal constant	-2147483648 to 2147483647
Hexadecimal constant	H0 to HFFFFFFF
Character string	Enclose the character string with double quotation marks " ". Example: "ABCDE"

(Note) The maximum number of characters for a character string type variable is set to 256, therefore, if more than 256 characters are described in the macro program, the characters in excess are truncated when the macro program is executed.

Operator

The operators that can be used in the macro program are shown below.

Function	Operator	Description example	Function
Substitution	=	B = A	Substitute B with A.
Addition	+	C = A + B	Substitute C with A + B.
Subtraction	-	C = A - B	Substitute C with A - B.
Multiplication	*	C = A * B	Substitute C with A \times B.
Division	/	C = A / B	Substitute C with A / B.
Remainder	%	C = A % B	Substitute C with the remainder of A / B.
	MOD	C = A MOD B	
Logical sum (OR)		C = A B	Substitute C with the logical sum of A and B. Possible to substitute every 32 bit.
	OR	C = A OR B	
Logical product (AND)	&	C = A & B	Substitute C with the logical product of A and B. Possible to substitute every 32 bit.
	AND	C = A AND B	
Negation (NOT)	!	B = !A	Substitute B with negation of A.
Exclusive OR (XOR)	^	C = A ^ B	Substitute C with exclusive OR of A and B. Possible to substitute every 32 bit.
	XOR	C = A XOR B	
1's complement	~	B = ~A	Substitute B with A's complement.
Arithmetic bit shift (left)	<<	C = A << B	Substitute C with A shifted to the left by B bits.
Arithmetic bit shift (right)	>>	C = A >> B	Substitute C with A shifted to the right by B bits.

(Note) MOD, OR, AND, and XOR are reserved words. Put a space both before and after these words when using.

Multiple operators can be combined.

Example:

A=(B+C)*(D+E/2);
A=[B OR C]+(D MOD E);

Priority among operators is shown below.

Priority	Operator
Higher	(,) , [,]
	~, !
	* , / , % , MOD
	+ , -
	<< , >>
	& , AND
	^ , XOR
	, OR
Lower	=

Operation function

The operators that can be used in the macro program are shown below.

Function	Operation command	Description example	Function
Sine(Unit: degree)	SIN	B = SIN[A]	Substitute the result of sine A into B
Cosine(Unit: degree)	COS	B = COS[A]	Substitute the result of cosine A into B
Tangent(Unit: degree)	TAN	B = TAN[A]	Substitute the result of tangent A into B (Note 2)
Arcsine	ASIN	B = ASIN[A]	Substitute the result of arcsine A into B (Note 2)
Arccosine	ACOS	B = ACOS[A]	Substitute the result of arccosine A into B (Note 2)
Arctangent	ATAN	B = ATAN[A]	Substitute the result of arctangent A into B
	ATN	B = ATN[A]	
Square root	SQRT	B = SQRT[A]	Substitute the result of square root A into B
	SQR	B = SQR[A]	
Absolute value	ABS	B = ABS[A]	Substitute the result of absolute value A into B
Conversion from BCD to BIN	BIN	B = BIN[A]	Substitute the result of BIN for BCD A into B (Note 1)
Conversion from BIN to BCD	BCD	B = BCD[A]	Substitute the result of BCD for BINARY A into B (Note 1)
Rounding off	ROUND	B = ROUND[A]	Substitute the rounded value of A into B
Discard fractions less than 1	FIX	B = FIX[A]	Substitute the result of A rounded down to an integer into B
Add for fractions less than 1	FUP	B = FUP[A]	Substitute the result of A rounded up to an integer into B
Natural logarithm	LN	B = LN[A]	Substitute the result of natural logarithm A into B (Note 2)
Exponent with e (=2.718) as bottom	EXP	B = EXP[A]	Substitute the result of EXP A into B

- The decimal point accuracy is guaranteed for up to 8 places of decimals of 16 digits decimal.

(Note 1) The followings are the precautions when using BIN and BCD.

- If the decimal point is used, they are processed as an integer.
- If a negative number is used, it is processed as an integer with BCD but a running macro will be interrupted with BIN.
- If an <empty> is used, a running macro will be interrupted with both BIN and BCD.

(Note 2) A running macro will be interrupted because the operation is impossible when:

- The value over 1 or less than -1 is designated with ASIN and ACOS.
- 90.270 etc. is designated with TAN.
- 0, a negative number or <empty> is designated with LN.

(Note 3) The degree of ASIN varies according to the parameter value "#1273/bit0 Switch ASIN calculation results range".

#1273/Bit0	0 : -90° to 90°
	1: 270° to 90°

Example)

Sine SIN	#501 = SIN[60]; #502 = SIN[60.]; #503 = 1000*SIN[60]; #504 = 1000*SIN[60.]; #505 = 1000.*SIN[60]; #506 = 1000.*SIN[60.];	#501 0.866 #502 0.866 #503 866.025 #504 866.025 #505 866.025 #506 866.025
Cosine COS	#511 = COS[45]; #512 = COS[45.]; #513 = 1000*COS[45]; #514 = 1000*COS[45.]; #515 = 1000.*COS[45]; #516 = 1000.*COS[45.];	#511 0.707 #512 0.707 #513 707.107 #514 707.107 #515 707.107 #516 707.107
Tangent TAN	#521 = TAN[60]; #522 = TAN[60.]; #523 = 1000*TAN[60]; #524 = 1000*TAN[60.]; #525 = 1000.*TAN[60]; #526 = 1000.*TAN[60.];	#521 1.732 #522 1.732 #523 1732.051 #524 1732.051 #525 1732.051 #526 1732.051
Arcsine ASIN	#531 = ASIN[100.500/201]; #532 = ASIN[100.500/201.]; #533 = ASIN[0.500]; #534 = ASIN[-0.500];	#531 30.000 #532 30.000 #533 30.000 #534 -30.000 (Note) When "1" is set to "#1273/bit0", the result is "#534 = 330°".
Arccosine ACOS	#541 = ACOS[100/141.4213]; #542 = ACOS[100./141.4213];	#541 45.000 #542 45.000
Arctangent ATAN ATN	#551 = ATAN[173205/100000]; #552 = ATAN[173205/100000.]; #553 = ATAN[173.205/100]; #554 = ATAN[173.205/100.]; #555 = ATN[1.73205];	#551 60.000 #552 60.000 #553 60.000 #554 60.000 #555 60.000
Square root SQRT SQR	#561 = SQRT[1000] #562 = SQRT[1000.]; #563 = SQR[10.*10.+20.+20.];	#561 31.623 #562 31.623 #563 22.360
Absolute value ABS	#571 = ABS[-1000]; #572 = ABS[50-100];	#571 1000.000 #572 50.000
BIN BCD	#581 = BIN[100]; #582 = BCD[100];	#581 64 #582 256
Rounding off ROUND	#591 = ROUND[14/3]; #592 = ROUND[14./3]; #593 = ROUND[14/3.]; #594 = ROUND[14./3.]; #595 = ROUND[-14/3]; #596 = ROUND[-14./3]; #597 = ROUND[-14/3.]; #598 = ROUND[-14./3.];	#591 5 #592 5 #593 5 #594 5 #595 -5 #596 -5 #597 -5 #598 -5
Discard fractions less than 1 FIX	#601 = FIX[14/3]; #602 = FIX[14./3]; #603 = FIX[-14/3.]; #604 = FIX[-14./3.];	#601 4.000 #602 4.000 #603 -4.000 #604 -4.000
Add for fractions less than 1 FUP	#611 = FUP[14./3.]; #612 = FUP[14/3.]; #613 = FUP[-14./3.]; #614 = FUP[-14/3.];	#611 5.000 #612 5.000 #613 -5.000 #614 -5.000
Natural logarithm LN	#621 = LN[5]; #622 = LN[0.5]; #623 = LN[-5.0]	#621 1.609 #622 -0.693 A running macro will be interrupted.
Exponent	#631 = EXP[2]; #632 = EXP[1]; #633 = EXP[-2];	#631 7.389 #632 2.718 #633 0.135

Custom API Function

(1) Setting address

For custom API function, designate NCs, part systems, or axes to operate to the address of argument.

Use the following macros for the address.

Name of function/constants	Description of function
ADR_MACHINE(n)	Designates NC (n: 1 and other numbers.)
ADR_SYSTEM(n)	Designates part systems (n: 1 and other numbers.)
ADR_GROUND(0)/ADR_GROUND(1)	Designates foreground/background.
ADR_BASE_SYSTEM	Designates basic part system.
ADR_CROSS_CURRENT	Designates current part system in cross.
ADR_FORCE_WRITE	Forced writing mode.

- Combine function and constants with the theory sum (|) and set.
- The designation for necessary address differs depending on the function used.
Refer to "6. NC Data Access Function".
- Specify 1 for designating NC. ADR_MACHINE(1) can be omitted.
- Designate part systems according to specification of NC being used.

Examples:

Ex. 1) Specify NC No.1 and background
ADR_MACHINE(1) | ADR_GROUND(1)

Ex. 2) Specify NC No. 1 and basic second part system
ADR_MACHINE(1) | ADR_BASE_SYSTEM | ADR_SYSTEM(2)

Ex. 3) Specify NC No. 1 and forced writing mode
ADR_MACHINE(1) | ADR_FORCE_WRITE

(2) Error judgment

This function judges the execution results (normal/abnormal) of custom API functions.

Name of function	Description of function
RetvIsError(IStatus)	Judges the execution results of custom API functions.

- Designate the execution results of custom API functions to IStatus.
- When judging normal, returns "0".
- When judging abnormal, returns "1".

Ex.: Execute the function "melGetData()" and judge the result.

```

LONG IStatus;
LONG IData;
LONG IAddress;

'Acquire data
IAddress = ADR_MACHINE(1) | ADR_SYSTEM(1);
IStatus = melGetData(IAddress, 127, 2002, H1, IData);
IF(RetvIsError(IStatus))
    'Error when executing
ENDIF

```

String Operation Functions

The following string operation functions are available in the macro program.

String operation function	Command	Description example	Function
String concatenation	strcat	C = strcat(A,B)	Concatenates B to A.
String comparison	strcmp	n = strcmp(A,B)	Compares A with B.
String copy	strcpy	C = strcpy(A,B)	Copies B to A.
Get string length	strlen	n = strlen(A)	Gets the number of characters in A.
String concatenation (Number of characters specified)	strncat	C = strncat(A,B, n)	Concatenates B to A by n characters.
String comparison (Number of characters specified)	strncmp	n = strncmp(A,B, n)	Compares A with B by n characters.
String copy (Number of characters specified)	strncpy	C = strncpy(A,B, n)	Copies B to A by n characters.
Character search	strchr	n2 = strchr(A,n1)	Searches for the character specified in n1 from the beginning of A, and assigns the detection position to n2 (for n1, specify an ASCII code).
Character search	strrchr	n2 = strrchr(A,n1)	Searches for the character specified in n1 from the end of A, and assigns the detection position to n2 (for n1, specify an ASCII code).
Character group search	strpbrk	n = strpbrk(A,B)	Searches for any character included in the character group of B from the beginning of A, and assigns the detection position to n.
String search	strstr	n = strstr(A,B)	Searches for a character string of B from the beginning of A, and assigns the detection position to n.
Character group search	strspn	n = strspn(A,B)	Searches for any character not included in the character group of B from the beginning of A, and assigns the detection position to n.
Character group search	strcspn	n = strcspn(A,B)	Searches for any character included in the character group of B from the beginning of A, and assigns the detection position to n.

(Note1) The cautions on using string operation functions are as follows.

- The available characters are single-byte alphanumeric characters, including symbols.
- A string type variable, char type array variable, or string constant can be specified for a character string type argument.
- A string constant cannot be specified for the first argument of strcat, strcpy, strncat, or strncpy.
- Each string operation function handles up to the element count (up to 100 characters) in the char type array variable declaration as a character string.

An element with value = 0 is recognized as the character string terminator.

Example: When storing character string "ABC" in the char type array variable with element count 100:

```
CHAR chData(100);
    chData(0) = H41;  ' "A"
    chData(1) = H42;  ' "B"
    chData(2) = H43;  ' "C"
    chData(3) = H0;   ' Character string terminator
```

- The string comparison functions (strcmp and strncmp) judge the ASCII code sequence from the beginning of a character string.

Example: When string A: "AA" and string B: "AB": String A is judged to be less than string B, and "< 0" is returned.

Example: When character string A: "AB" and character string B: "AAA": Character string A is judged to be greater than character string B, and "> 0" is returned.

Example: When character string A: "ABC" and character string B: "ABC": Character string A is judged to be equal to character string B, and "0" is returned.

- The detection position of each character string search function (strchr, strrchr, strpbrk, strstr, strspn, and strcspn) is returned with the value that is returned with 0 or greater value.

Type conversion

The following type conversion commands are available in the macro program.

A number read as a character string by type conversion can be handled as a numeric value of the integer type or floating point type.

Also, a numeric value of the integer type or floating point type can be converted into the character string type.

Type conversion command	Example	Description
ATOL ATOF	B = ATOL(A)	Converts a character string type variable A to the signed 32-bit integer type and substitute it into B.
	B = ATOF(A)	Convert a character string type variable A to the signed 64-bit floating point type and substitute it into B.
LTOA FTOA	A = LTOA(B,n)	Converts variable B of the signed 32-bit integer type to the character string type, and assigns it to variable A. Specify the conversion method based on the radix (2 to 16) of n.
	A = FTOA(B,n)	Converts variable B of the signed 64-bit floating point type to the character string type, and assigns it to variable A. You can specify the number of decimal places (0 to 10) for n to convert the data type.

(Note 1) When variable A includes characters other than a numeric value, decimal point, or positive and negative symbols, the numeric value before those characters is valid.

Example: A="1a2"; B=ATOL(A); The value of B is "1".
 A="a12"; B=ATOL(A); The value of B is "0".
 A="-10"; B=ATOL(A); The value of B is "-10".
 A="--10"; B=ATOL(A); The value of B is "0".
 A="10"; B=ATOL(A); The value of B is "10".
 A="12 3"; B=ATOL(A); The value of B is "12".
 A="12.3"; B=ATO(A); The value of B is "12.3".
 A="1.2E1"; B=ATO(A); The value of B is "12".

(Note 2) ATOL cannot convert a variable including the decimal point or index. Such a variable is handled in the same way as for other characters.

(Note 3) In LTOA, operations are performed as shown below.

- If the specified radix is outside the allowable range, the value is handled as radix 10.
- If alphabetical characters are included in the converted result, they are converted in uppercase.
- The converted character string is zero-suppressed.

Example: B=1000; A=LTOA(B, 10); The value of A is "1000". Converted in decimal notation.
 B=1000; A=LTOA(B, 16); The value of A is "3E8". Converted in hexadecimal notation.
 B=1000; A=LTOA(B, 2); The value of A is "1111101000". Converted in binary notation.
 B=1000; A=LTOA(B, 10); The value of A is "-1000". Converted in decimal notation.
 B=1000; A=LTOA(B, 16); The value of A is "FFFC18". Converted in hexadecimal notation.
 B=1000; A=LTOA(B, 2); The value of A is "11111111111111111111110000011000". Converted in binary notation.

(Note 4) In FTOA, the value is converted up to the specified number of decimal places, and the subsequent places are rounded off.

It is not converted into an exponential notation. If the number of significant digits is less than the number of decimal places, 0s are embedded.

When the number of decimal places exceeds 10, the value is handled as a 10-digit value.

However, a negative value causes a conversion failure.

Example: B=1.23456; A=FTOA(B, 3); The value of A is "1.235". Indicated up to three decimal places (the fourth place is rounded off).

B=1.23456; A=FTOA(B, 10); The value of A is "1.2345600000". Indicated up to 10 decimal places (insufficient places are embedded with "0").

(Note 5) If the value exceeds the allowable range of the 32-bit integer type (-2147483648 to 2147483647) or the allowable range of the 64-bit floating point type (real number of 15 significant digits), an incorrect value is assigned.

Conditional Branch

Conditional branch commands are used in the macro program to branch according to the judgment of a condition. The conditional branch commands that can be used are listed below.

Item	Description
IF ELSEIF ELSE ENDIF	Enclose the condition expression with brackets () or [] following IF or ELSEIF. Add ENDIF without fail at the end. Up to 15 nesting levels are allowed. Example: IF(a==0) GCSTextboxSetString(-1,"GTextBox00001","000"); ELSEIF[a==1] GCSTextboxSetString(-1,"GTextBox00001","001"); ELSE GCSTextboxSetString(-1,"GTextBox00001","111"); ENDIF

Condition Expression

The condition expressions used for condition judgment in the IF statement are described in the following way.

Condition expression	Establishment condition
A == B	Established if A is equal to B.
A EQ B	
A > B	Established if A is larger than B.
A GT B	
A >= B	Established if A is equal to or larger than B.
A GE B	
A < B	Established if A is smaller than B.
A LT B	
A <= B	Established if A is equal to or smaller than B.
A LE B	
A != B	Established if A is not B.
A NE B	
A && B	Established if both condition A and B are established (logical product).
A B	Established if either condition A or B is established (logical sum).

(Note 1) EQ, GT, GE, LT, LE and NE are reserved words. When using these words, make sure to enter a space before and after them.

(Note 2) When comparing between an integer value and a floating point value, a floating point value will be rounded down to an integer and then compared.

EX) When "@1 = 1" and "#1 = 1.1", they are compared as shown below since #1 is rounded down to an integer 1.

```

@1 == #1 ... 1=1 Established
@1 != #1 ... 1≠1 Not established
@1 <= #1 ... 1≤1 Established
@1 >= #1 ... 1≥1 Established
@1 < #1 ... 1<1 Not established
@1 > #1 ... 1>1 Not established

```

(Note 3) When an undefined variable (#) is used in a conditional expression such as "EQ", "==" , "NE", "!=" , it will be a compare condition with <empty>, however, if other reserved words are used for a conditional expression, it will be a compare condition with "0".

When #100 = <empty>	When #100 = 0
#100 EQ #0 <Empty>==<Empty> Established	#100 EQ #0 0==<Empty> Not established
#100 NE #0 <Empty>≠<Empty> Not established	#100 NE #0 0≠<Empty> Established
#100 GE #0 <Empty>≥0 Established	#100 GE #0 0≥0 Established
#100 GT #0 <Empty>>0 Not established	#100 GT #0 0>0 Not established
#100 LE #0 <Empty>≤0 Established	#100 LE #0 0≤0 Established
#100 LT #0 <Empty><0 Not established	#100 LT #0 0<0 Not established

Program Branch

In the macro program, program branch commands are used to control the flow of program execution. The following program branch commands can be used.

Command	Description
FOR, NEXT	Repeat the program between FOR and NEXT by the designated number of times. Up to eight nesting levels are allowed. Example: FOR(5) VAR_A = VAR_A + 1; NEXT
FOR, BREAK	Interrupt program repetition. Example: FOR(3) VAR_B= VAR_B + 1; IF(VAR_B > 10 && VAR_A == 1) BREAK; ENDIF NEXT
FOR, CONTINUE	Repeat a program. Example: FOR(3) IF(VAR_C == 1) CONTINUE; ENDIF VAR_C = VAR_C + 1; NEXT
WHILE, DO <i>i</i> , END <i>i</i> (<i>i</i> is the identification No. for "WHILE".)	While the conditional expression is established, a program will be repeated up to the END which has the same number as the identification number following DO <i>i</i> . Add ";" (a semicolon) at the end of DO <i>i</i> and END <i>i</i> . Example: WHILE (VAR_D == 1) DO1; VAR_D = VAR_D + 1; END1; - The same identification number can be used a number of times. - 1 to 127 is available for the identification number and there is no rule for the description order. - Up to 27 nesting level can be used. - BREAK and CONTINUE commands are available between WHILE[conditional expression] DO <i>i</i> and END <i>i</i> . - END <i>i</i> must be designated after WHILE[conditional expression] DO <i>i</i> ; - WHILE[conditional expression] DO <i>i</i> and END <i>i</i> must correspond on 1:1 (pairing) basis in a same macro. - Two WHILE[conditional expression] DO <i>i</i> must not intersect. - An infinite loop cannot be described in a style like WHILE(1).

Command	Description
GOTO n (n = sequence No.)	<p>Setting a sequence No. after GOTO allows to branch to the sequence No. commanded in a macro.</p> <p>Example: GOTO 100;</p> <pre style="margin-left: 40px;">#100 = #10; N100; ← #100 = #20;</pre> <ul style="list-style-type: none"> - Description of IF[conditional expression]GOTOn; is same as IF[conditional expression] to ENDIF. IF ELSE, ELSEIF or ENDIF is added after GOT0, an error will occur when checking error. - GOTO statement cannot be used with ELSE, ELSEIF. - It is possible to branch out from WHILE[conditional expression] D0i with GOTO statement. - It is not possible to branch into WHILE[conditional expression] D0i with GOTO statement. - When executing a macro with a sequence No. described with # variable or @ variable but a sequence No. which corresponds to the # variable or @ variable does not exist, the running macro will be interrupted at where the GOTO is commanded. - When a variable or expression (such as GOTO#100) is set as a sequence No. but the sequence No. does not exist, the running macro will be interrupted.

The sequence No. is used as a label to show the destination of program branching command. The below explains the format of sequence No.

N	No.
Always add at the head	1 to 99999 in decimal

- When only writing the sequence No., make sure to add a semicolon ";" at the end.
Example:N100;
- It is possible to add a processing after the sequence No. In this case, a space will be required between the sequence No. and a processing.
Example:N100 #100=10;
- The sequence No. after the GOTO statement always needs to be added in the same macro. If not, "GOTO sentence error" error will occur.
- When the sequence number of the branch destination is searched in GOTO statement, the search is conducted from the GOTO statement to a macro end (\$END). If the sequence No. is located before the GOTO statement, it cannot be searched. If there is multiple same sequence No., it branches to the first found sequence No. with this order.
- An error will occur when designating the common variable to the sequence No.
EX:N#200

(Note) As the sequence No. format can be written in a same program with a variable name definition, an error will occur if the sequence No. whose name is the same as the variable name is defined.

Example:

```
SHORT N1000;
N1000=100; ←
N1000; This definition is a grammatical error.
IF[#100 EQ #1] GOTO N1000
```

WHILE statement description method

<p>(1) Same identification No. can be used any number of times.</p> <pre>\$GBasicControl00000-OnCreate WHILE[conditional expression] DO1; } END1; WHILE[conditional expression] DO1; } END1; \$End</pre>	<p>(2) Any order may be used for the WHILE to DOI identification No.</p> <pre>\$GBasicControl00001-OnKeyPress WHILE[conditional expression] DO3; } END3; WHILE[conditional expression] DO1; } END1; \$End</pre>
<p>(3) Up to 27 nesting levels can be used.</p> <pre>\$GBasicControl00002-OnKeyRelease WHILE[conditional expression] DO1; } WHILE[conditional expression] DO2; } WHILE[conditional expression] DO27; } END27; END2; END1; \$End</pre>	<p>(4) Nesting levels cannot exceed 27.</p> <pre>\$GBasicControl00003-OnPress WHILE[conditional expression] DO1; } WHILE[conditional expression] DO2; } WHILE[conditional expression] DO28; Impossible } END28; END2; END1; \$End</pre>
<p>(Note) For nesting, an identification No. which has been used once cannot be used again.</p> <p>(5) ENDi must be designated after WHILE[conditional expression] DOI.</p> <pre>\$GBasicControl00004-OnRelease END1; Impossible WHILE[conditional expression] DO1; \$End</pre> <p>(Note) "WHILE DO sentence error" will occur.</p>	<p>(Note) "Too many WHILE command" error will occur.</p> <p>(6) WHILE [conditional expression] DOI and ENDi must correspond on 1:1 (pairing) basis in a same program.</p> <pre>\$GBasicControl00005-OnClick WHILE[conditional expression] DO1; } WHILE[conditional expression] DO1; Impossible } END1; \$End</pre> <p>(Note) "WHILE DO sentence error" will occur.</p>

<p>(7) Two WHILE[conditional expression] DOi must not overlap.</p> <pre>\$GBasicControl00006-OnDraw WHILE[conditional expression] DO1; } WHILE[conditional expression] DO2; Impossible } END1; } END2; \$End</pre> <p>(Note)"WHILE DO sentence error" will occur.</p>	<p>(8) It is not allowed to abbreviate WHILE[conditional expression], and to describe only D0 to END.</p> <pre>\$GBasicControl00007-OnSetFocus DO1; Impossible } END1; \$End</pre>
<p>(9) An infinite loop cannot be described in a style like WHILE(1).</p> <pre>\$GBasicControl00008-OnKillFocus WHILE(1) DO1; Impossible } END1; \$End</pre>	<p>(10) BREAK and CONTINUE commands can be used between DOi and END in WHILE[conditional expression].</p> <pre>\$GBasicControl00009-OnKillFocus WHILE[conditional expression] DO1; } BREAK; } END1; \$End</pre>

GOTO statement description method

<p>(1) When a condition is established with IF[conditional expression] GOTO n;, it will be branched. In this case, no need to add ENDIF.</p> <pre>\$GTextBox00000-OnKeyPress IF(#1 == #2) GOTO 100; #3 = #3 + 1; N99; #10 = #5 N100;← #1 = #10; \$End</pre>	<p>(2) It is possible to branch out from WHILE[conditional expression] DOi with GOTO statement.</p> <pre>\$GTextBox00001-OnKeyPress WHILE[conditional expression] DO1; IF[#50 != #100] GOTO 100; END1; } N100;← #150 = 1.5; \$End</pre>
---	---

- (3) It is not possible to branch into WHILE[conditional expression] D0i with GOTO statement.

```
$GTextBox00002-OnKeyPress
IF[conditional expression] GOTO 100;
WHILE[conditional expression] DO1;
N100;
END1;
```

The diagram shows a code snippet where an arrow points from the 'END1;' label back to the 'WHILE' label, indicating that this is an impossible GOTO path.

\$End

\$GTextBox00003-OnKeyPress

```
WHILE[conditional expression] DO1;
IF[conditional expression] GOTO 100;
END1;
WHILE[conditional expression] DO1;
N100;
END1;
```

The diagram shows a code snippet where an arrow points from the 'END1;' label back to the 'WHILE' label, indicating that this is an impossible GOTO path.

\$End

\$GTextBox00004-OnKeyPress

```
WHILE[conditional expression] DO1;
WHILE[conditional expression] DO2;
IF[conditional expression] GOTO 100;
END2;
N100;
END1;
```

The diagram shows a code snippet where an arrow points from the 'END1;' label back to the 'WHILE' label, indicating that this is an impossible GOTO path.

\$End

(Note) "GOTO statemen inconsistent" error will occur.

- (5) If there is multiple same sequence No., it branches to the first found sequence No.

```
$GTextBox00006-OnKeyPress
}
IF[#110 == #120] GOTO 100;
}
N100 @1 = 1;
}
N100 #10 = 10.01;
}
$END
```

The diagram shows a code snippet where an arrow points from the 'IF' block to the 'N100 @1 = 1;' label, indicating that the GOTO statement branches to the first found sequence number.

- (4) When the sequence No. of the branch destination is searched, the search is conducted from the GOTO statement to a macro end (\$End).

```
$GTextBox00005-OnKeyPress
}
N100; <-----#
#100 = 100.1;
IF[#10 == #20] GOTO 10;
ELSE GOTO 100; -----#
ENDIF
N10; <-----#
#10 = 10.1;
}

$END
```

The diagram shows a code snippet where an arrow points from the 'IF' block to the '\$END' label, indicating that the GOTO statement branches to the macro end.

(Note) If the sequence number of the branch destination is located before the GOTO statement, "WHILE DO sentence error" will occur.

5. Function Details

The macro functions used for the macro programming are explained in this section.

5.1 Normal Command

SetCallback	Select call-back processing execution
Syntax	SetCallBack(nlsExec);
Argument	(i) LONG nlsExec : Whether or not to execute call-back processing
Return value	None
Details	<p>Set whether or not to execute call-back processing. Set nlsExec to the value below.</p> <p>0: Does not execute call-back processing after macro operation. 1: Executes call-back processing after macro operation.</p>
Example	<p>Set so that call-back processing is executed after macro operations. SetCallBack(1);</p>

GMEMCreate	Create global memory
Syntax	GMEMCreate(strGmemName, nSize);
Argument	<p>(i) STRING strGmemName : global memory name (i) LONG nSize : memory size</p>
Return value	Global memory
Details	Creates a global memory by specifying a corresponding name.
Example	<p>Creates a global memory "mem" that consists of 100 bytes of global memory named "ABC". GMEM mem; mem = GMEMCreate("ABC", 100);</p>

GMEMSelect	Select global memory
Syntax	GMEMSelect(strGmemName);
Argument	(i) STRING strGmemName : global memory name
Return value	Global memory
Details	Gets the global memory with the specified name. Needs to specify the name of the global memory that has already been created in strGmemName.
Example	Gets the global memory named "ABC". GMEM mem; mem = GMEMSelect("ABC");

GMEMDelete	Delete global memory
Syntax	GMEMDelete(gmBuffer);
Argument	(i) GMEM gmBuffer : global memory
Return value	None
Details	Deletes the specified global memory.
Example	Deletes the global memory named "ABC". GMEM mem; mem = GMEMSelect ("ABC"); GMEMDelete(mem);

GMEMSetChar	Set 8bit integer value to global memory
Syntax	GMEMSetChar(gmBuffer, nOffset, nData);
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position (i) CHAR nData : setting value
Return value	None
Details	Sets an 8bit integer value in the nOffset byte from the beginning of the specified global memory.
Example	Sets 8bit integer (10) in the "ABC" global memory's 4th byte position from the top. GMEM mem; mem = GMEMSelect("ABC"); GMEMSetChar(mem, 4, 10);

GMEMGetChar	Get 8bit integer value from global memory
Syntax	GMEMGetChar(gmBuffer, nOffset);
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position
Return value	8bit integer value
Details	Gets an 8bit integer value in the nOffset byte from the beginning of the specified global memory.
Example	Gets 8bit integer value in the "ABC" global memory's 4th byte position from the top. CHAR Data; GMEM mem; mem = GMEMSelect("ABC"); Data = GMEMGetChar(mem, 4);

GMEMSetShort	Set 16bit integer value in global memory
Syntax	<code>GMEMSetShort(gmBuffer, nOffset, nData);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position (i) SHORT nData : setting value
Return value	None
Details	Sets a 16bit integer value in the nOffset byte from the beginning of the specified global memory.
Example	Sets a 16bit integer (1000) in the "ABC" global memory's 4th byte position from the beginning. <pre>GMEM mem; mem = GMEMSelect("ABC"); GMEMSetShort(mem, 4, 1000);</pre>

GMEMGetShort	Get 16bit integer value from global memory
Syntax	<code>GMEMGetShort(gmBuffer, nOffset);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position
Return value	16bit integer value
Details	Gets a 16bit integer value in the nOffset byte from the beginning of the specified global memory.
Example	Gets 16bit integer value in the "ABC" global memory's 4th byte position from the top. <pre>SHORT Data; GMEM mem; mem = GMEMSelect("ABC"); Data = GMEMGetShort(mem, 4);</pre>

GMEMSetLong	Set 32bit integer value to global memory
Syntax	<code>GMEMSetLong(gmBuffer, nOffset, nData);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position (i) LONG nData : setting value
Return value	None
Details	Sets a 32bit integer value in the nOffset byte from the beginning of the specified global memory.
Example	Sets 32bit integer value (100000) in the "ABC" global memory's 4th byte position from the top. <code>GMEM mem;</code> <code>mem = GMEMSelect("ABC");</code> <code>GMEMSetLong(mem, 4, 100000);</code>

GMEMGetLong	Get 32bit integer value from global memory
Syntax	<code>GMEMGetLong(gmBuffer, nOffset);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position
Return value	32bit integer value
Details	Gets 32bit integer value in the nOffset byte data from the beginning of the specified global memory.
Example	Gets a 32bit integer in the "ABC" global memory's 4th byte position from the beginning. <code>LONG Data;</code> <code>GMEM mem;</code> <code>mem = GMEMSelect("ABC");</code> <code>Data = GMEMGetLong(mem, 4);</code>

GMEMSetDouble	Set 64bit floating point value in global memory
Syntax	<code>GMEMSetDouble(gmBuffer, nOffset, fData);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position (i) DOUBLE fData : setting value
Return value	None
Details	Sets a 64bit floating point value in the nOffset byte from the beginning of the specified global memory.
Example	Sets 64bit floating point value (0.1234) in the "ABC" global memory's 8th byte position from the top. <code>GMEM mem;</code> <code>mem = GMEMSelect("ABC");</code> <code>GMEMSetDouble(mem, 8, 0.1234);</code>
GMEMGetDouble	Get 64bit floating poing value from global memory
Syntax	<code>GMEMGetDouble(gmBuffer, nOffset);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position
Return value	64bit floating point value
Details	Gets 64bit floating point value in the nOffset byte data from the beginning of the specified global memory.
Example	Gets a 64bit floating point value in the "ABC" global memory's 8th byte position from the beginning. <code>DOUBLE Data;</code> <code>GMEM mem;</code> <code>mem = GMEMSelect("ABC");</code> <code>Data = GMEMGetDouble(mem, 8);</code>

GMEMSetString	Set character string in global memory
Syntax	<code>GMEMSetString(gmBuffer, nOffset, strData);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position (i) STRING strData : character string to be set
Return value	None
Details	Sets a character string in the nOffset byte from the beginning of the specified global memory.
Example	Sets a character string ("abcdef") in the "ABC" global memory's 4th byte position from the top. <code>GMEM mem;</code> <code>mem = GMEMSelect("ABC");</code> <code>GMEMSetString(mem, 4, "abcdef");</code>
GMEMGetString	Get character string from global memory
Syntax	<code>GMEMGetString(gmBuffer, nOffset);</code>
Argument	(i) GMEM gmBuffer : global memory (i) LONG nOffset : offset position
Return value	Character string
Details	Gets the character string in the nOffset byte from the beginning of the specified global memory.
Example	Gets the character string in the "ABC" global memory's 4th byte position from the top. <code>STRING Data;</code> <code>GMEM mem;</code> <code>mem = GMEMSelect("ABC");</code> <code>Data = GMEMGetString(mem, 4);</code>

ExecDfc	Execute user definition process
Syntax	<code>ExecDfc(dllName, funcName, dfcArg);</code>
Argument	(i) STRING dllName : DLL name (i) STRING funcName : DFC function name (i) GMEM dfcArg : DFC argument global memory
Return value	None
Details	Executes upon passing the argument information to the function contained in DLL of the specified DLL name. (DLL name and DLL file name are the same, except that the latter has no extension.)
Example	Executes the function after passing a global memory "mem" as an argument to the function "dfcFunc01" which is included in the "DFC.dll" DLL. GMEM mem; mem = GMEMSelect("ABC"); <code>ExecDfc("DFC", "dfcFunc01", mem);</code>

NormalMethod	Call normal process of control
Syntax	<code>NormalMethod();</code>
Argument	None
Return value	Return value of normal process of control.
Details	Carries out normal process of control.
Example	Calls normal process of control. <code>LONG IRet;</code> <code>IRet = NormalMethod();</code> <code>Return(IRet);</code>

GCSGetLastPanelNumber	Get last displayed screen No.
\ Syntax	GCSGetLastPanelNumber (nFunctionNo);
\ Argument	(i) LONG nFunctionNo : function No.
\ Return value	Screen No.
\ Details	<p>Displays the previously displayed custom screen when the screen is changed using a function key. Set nFunctionNo to one of the following values.</p> <ul style="list-style-type: none"> 0: SFP key 1: F0 key 2: Window display key 3: Window selection key
\ Example	Gets the last displayed screen No. whose function No. is 0
	<pre>LONG _IPanelNumber = GCSGetLastPanelNumber(0) GCSGEShowPanel(_IPanelNumber);</pre>

GCSUser	User process
\ Syntax	GCSUser(nWindowNo, nFunctionNo, gmParam);
\ Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (i) LONG nFunctionNo : function No. (i/o)GMEM gmParam : setting value global memory
\ Return value	1: Succeed 0: Fail
\ Details	Executes the User function that corresponds to the function No. of the specified screen No.
\ Example	<p>Executes the User function with the screen No. of 1027 and the function No. of 4193.</p> <pre>GMEM mem; mem = GMEMCreate("TESTMEM", 70); GCSUser (1027, 4193, mem); GMEMDelete(mem);</pre>

GCSKeyPress	Key press process
Syntax	<code>GCSKeyPress(nWindowNo, nKeyCode, lKeyStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (i) LONG nKeyCode : virtual key code (i) LONG lKeyStatus : key status
Return value	1: Succeed 0: Fail
Details	Executes the KeyPress function that corresponds to the function No. of the specified screen No.
Example	Executes the KeyPress function of the screen No. 1. <code>GCSKeyPress (1, LLPARAM, LUPARAM);</code>
GCSRessourceLoadString	Get ID character string specified from resource data
Syntax	<code>GCSRessourceLoadString(usID, pString);</code>
Argument	(i) LONG usID : character string resource ID (o) STRING pString : character string to be acquired
Return value	Getting result 0 : Abnormal 1 : Normal
Details	Gets the resource character string which has the specified ID.
Example	Sets the character strings at and subsequent to nOffset in the character string table for the GNXMenu00000 1st to 9th menu buttons in the self screen. <pre> SHORT nOffset ; 'Offset (0-) from the beginning of the character string table SHORT nMenuLoop ; STRING strMenu ; nOffset = 1 ; nMenuLoop = 1 ; FOR (9) GCSRessourceLoadString((nOffset + nMenuLoop), strMenu) ; GCSMenuSetMenuItemName_one(-1, "GNXMenu00000", 1, nMenuLoop, strMenu) ; nMenuLoop = nMenuLoop + 1 ; NEXT </pre>

GCSGetStandardColor	Acquiring the color information according to the theme color for the specified display part
Syntax	GCSGetStandardColor (usPartsKind);
Argument	(i) LONG usPartsKind: Kind of part color to be acquired
Return value	The color information (RGB888) according to the theme color
Details	<p>Acquires the each part color used on the standard screen as the color information according to the theme color.</p> <p>Specify either of the following values to usPartsKind (kind of part color). When the color information cannot be acquired, -1 is returned to the return value.</p> <p>0: Window background color 1: Window frame (inside) 2: Window title frame (upper) 3: Window title frame (lower) 4: Window title gradation (start) 5: Window title gradation (end) 6: Value part normal background color (active area) 7: Value part normal background color (inactive area) 8: Label background color 9: Cursor color 10: Scroll bar - bar color 11: Scroll bar - button color 12: Scroll bar - background color 13: Scroll bar - pinch color 14: Background color during switch-ON state 15: Entry area - background color at the time of disabled state</p>
Example	<p>Sets the GTextBox00000 normal background color in the self screen to the value part normal background color (active area) according to the parameter (#11060 Screen theme color).</p> <pre>\$GTextBox00000-OnCreate LONG _gcColor; 'Get the color information according to the theme color (value part normal background color). _gcColor = GCSGetStandardColor(6); IF(_gcColor != -1) 'Set the acquired color information to the normal background color for the text box. GCSTextboxSetColor(-1, "GTextBox00000", _gcColor);</pre>

5.2 Control Common Command

GCSSetBlinkEnableStatus	Set blink operation
Syntax	<code>GCSSetBlinkEnableStatus(nWindowNo, strName, ucEnable);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucEnable : blink operation setting
Return value	None
Details	Sets the object blink operation. One of the following values is set for ucEnable: 0: disable 1: enable
Example	Sets the GButton00000 blink operation in the self screen to 1. <code>GCSSetBlinkEnableStatus(-1, "GButton00000", 1);</code>

GCSGetBlinkEnableStatus	Get blink operation
Syntax	<code>GCSGetBlinkEnableStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Setup of blink operation 0: disable 1: enable
Details	Gets the object blink operation.
Example	Gets the GButton00000 blink operation in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSGetBlinkEnableStatus(-1, "GButton00000");</code>

GCSSetBlinkStatus	Set blink status
Syntax	<code>GCSSetBlinkStatus(nWindowNo, strName, ucBlinkStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucBlinkStatus : blink status
Return value	None
Details	Sets the object blinking status for the object. One of the following values is set for ucBlinkStatus: 0: OFF status 1: ON status
Example	Sets the GButton00000 blink operation in the self screen to 1.

GCSGetBlinkStatus	Get blink status
Syntax	<code>GCSGetBlinkStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Blink status 0: OFF status 1: ON status
Details	Gets the object blinking status for the object.
Example	Gets the GButton00000 blink operation in the self screen in Stat. LONG Stat; Stat = GCSGetBlinkStatus(-1, "GButton00000");

GCSSetBlinkType	Set blink type
Syntax	<code>GCSSetBlinkType(nWindowNo, strName, ucBlinkType);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucBlinkType : blink type
Return value	None
Details	Sets the object blink type. One of the following values is set for ucBlinkType: 0: display/non-display of character string 1: change character color 2: change whole color
Example	Sets the GButton00000 blink operation in the self screen to 1. <code>GCSSetBlinkType(-1, "GButton00000", 1);</code>

GCSGetBlinkType	Get blink type
Syntax	<code>GCSGetBlinkType(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Blink type: 0: display/non-display of character string 1: change character color 2: change whole color
Details	Gets the object blink type.
Example	Gets the GButton00000 blink operation in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSGetBlinkType(-1, "GButton00000");</code>

GCSSetBounds	Set relative position within parent object
Syntax	<code>GCSSetBounds(nWindowNo, strName, gmBounds);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmBounds : global memory for relative position
Return value	None
Details	Sets the relative position within the parent object.
Example	<p>Sets the GButton00000 relative position in the self screen under the following conditions:</p> <p>upper left X coordinate : 10 upper left Y coordinate : 20 lower right X coordinate : 110 lower right Y coordinate : 120</p> <pre>mem = GMEMCreate("TESTMEM", 8); GMEMSetShort(mem, 0, 10); GMEMSetShort(mem, 2, 20); GMEMSetShort(mem, 4, 110); GMEMSetShort(mem, 6, 120); GCSSetBounds(-1, "GButton00000", mem); GMEMDelete(mem);</pre>

GCSGetBounds	Get relative position within parent object
Syntax	<code>GCSGetBounds(nWindowNo, strName, gmBounds);</code>
Argument	(i) LONG nWindowNo : screen No.(Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmBounds : global memory for relative position
Return value	Store the acquired relative position in gmBounds.
Details	Gets the relative position of the object within parent object.
Example	<p>Sets the GButton00000 relative position in the self screen as follows:</p> <pre>nXmin : upper left X coordinate nYmin : upper left Y coordinate nXmax : lower right X coordinate nYmax : lower right Y coordinate mem = GMEMCreate("TESTMEM", 8); GCSGetBounds(-1, "GButton00000", mem); GMEMGetShort(mem, 0); GMEMGetShort(mem, 2); GMEMGetShort(mem, 4); GMEMGetShort(mem, 6); GMEMDelete(mem);</pre>

GCSSetCaptionScrollEnable	Set scroll operation
Syntax	<code>GCSSetCaptionScrollEnable(nWindowNo, strName, ucEnable);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucEnable : scroll operation setting
Return value	None
Details	Sets the object scroll operation. One of the following values is set for ucEnable: 0: disable 1: enable 2: enable when out of bounds
Example	Sets the GButton00000 scroll operation in the self screen to 1. <code>GCSSetCaptionScrollEnable(-1, "GButton00000", 1);</code>

GCSGetCaptionScrollEnable	Get scroll operation
Syntax	<code>GCSGetCaptionScrollEnable(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Scroll operation 0: disable 1: enable 2: enable when out of bounds
Details	Gets the object scroll operation.
Example	Gets the GButton00000 scroll operation in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSGetCaptionScrollEnable(-1, "GButton00000");</code>

GCSStartCaptionScroll	Start scroll operation
Syntax	<code>GCSStartCaptionScroll(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Starts the object scroll operation. Needs to set the scroll operation to 1 or 2 in advance with <code>GCSSetCaptionScrollEnable</code> .
Example	Starts the GButton00000 scroll operation in the self screen. <code>GCSStartCaptionScroll(-1, "GButton00000");</code>

GCSStopCaptionScroll	Stop scroll operation
Syntax	<code>GCSStopCaptionScroll(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Stops the object scroll operation.
Example	Stops the GButton00000 scroll operation in the self screen. <code>GCSStopCaptionScroll(-1, "GButton00000");</code>

GCSPauseCaptionScroll	Pause scroll operation
Syntax	<code>GCSPauseCaptionScroll(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Pauses the object scroll operation.
Example	Pauses the GButton00000 scroll operation in the self screen. <code>GCSPauseCaptionScroll(-1, "GButton00000");</code>

GCSRRestartCaptionScroll	Restart scroll operation
Syntax	<code>GCSRRestartCaptionScroll(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Restart the object scroll operation.
Example	Restarts GButton00000 scroll operation in the self screen. <code>GCSRRestartCaptionScroll(-1, "GButton00000");</code>

GCSIsCaptionOutOfBounds	Confirm overflowing of caption character string
 Syntax	<code>GCSIsCaptionOutOfBounds(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Out of bounds status 0: not out of bounds 1: out of bounds
 Details	Confirms whether or not the caption character string set in the control goes out of the bounds of the control caption display area.
 Example	Gets the status of the GButton00000 caption character string in the self screen in Stat as to whether or not it goes out of the bounds. <code>LONG Stat;</code> <code>Stat = GCSIsCaptionOutOfBounds(-1, "GButton00000");</code>
GCSSetCaptionScrollDelayTime	Set scroll delay time
 Syntax	<code>GCSSetCaptionScrollDelayTime(nWindowNo, strName, ITime);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ITime : delay time setting
 Return value	None
 Details	Sets the delay time for the object scroll starting time.
 Example	Sets the GButton00000 scroll delay time in the self screen to 10. <code>GCSSetCaptionScrollDelayTime(-1, "GButton00000", 10);</code>

GCSGetCaptionScrollDelayTime	Get scroll delay time
Syntax	<code>GCSGetCaptionScrollDelayTime(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Delay time
Details	Gets the delay time for the object scroll starting time.
Example	Gets the GButton00000 scroll delay time in the self screen in Stat. LONG Stat; Stat = GCSGetCaptionScrollDelayTime(-1, "GButton00000");

GCSSetCaptionScrollRefreshTime	Set scroll refresh time
Syntax	<code>GCSSetCaptionScrollRefreshTime(nWindowNo, strName, ITime);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ITime : refresh time setting
Return value	None
Details	Sets the object scroll refresh time.
Example	Sets the GButton00000 scroll refresh time in the self screen to 10. <code>GCSSetCaptionScrollRefreshTime(-1, "GButton00000", 10);</code>

GCSGetCaptionScrollRefreshTime	Get scroll refresh time
Syntax	<code>GCSGetCaptionScrollRefreshTime(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Refresh time
Details	Gets the object scroll refresh time.
Example	Gets the GButton00000 scroll refresh time in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSGetCaptionScrollRefreshTime(-1, "GButton00000");</code>

GCSSetCaptionScrollMovementValue	Set scroll movement value
Syntax	<code>GCSSetCaptionScrollMovementValue(nWindowNo, strName, usMovementValue);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usMovementValue : movement value setting
Return value	None
Details	Sets the object scroll movement value.
Example	Sets the GButton00000 scroll movement value in the self screen to 10. <code>GCSSetCaptionScrollMovementValue(-1, "GButton00000", 10);</code>

GCSGetCaptionScrollMovementValue	Get scroll movement value
Syntax	<code>GCSGetCaptionScrollMovementValue(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Movement value
Details	Gets the object scroll movement value.
Example	Gets the GButton00000 scroll movement value in the self screen in Stat. LONG Stat; Stat = GCSGetCaptionScrollMovementValue(-1, "GButton00000");
GCSSetCaptionScrollStartPosition	Set scroll start position
Syntax	<code>GCSSetCaptionScrollStartPosition(nWindowNo, strName, ucStartPosition);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucStartPosition : start position setting
Return value	None
Details	Sets the object scroll start position. One of the following values is set for ucStartPositio: 0: Follow current caption setting. 1: From right.
Example	Sets the GButton00000 scroll start position in the self screen to 1. <code>GCSSetCaptionScrollStartPosition(-1, "GButton00000", 1);</code>

GCSGetCaptionScrollStartPosition	Get scroll start position
Syntax	<code>GCSGetCaptionScrollStartPosition(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Start position 0: Follow current caption setting. 1: From right.
Details	Gets the object scroll start position.
Example	Gets the GButton00000 scroll start position in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSGetCaptionScrollStartPosition(-1, "GButton00000");</code>
GCSSetCaptionScrollPosition	Set total scroll movement value
Syntax	<code>GCSSetCaptionScrollPosition(nWindowNo, strName, IPosition);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG IPosition : total movement value setting
Return value	None
Details	Sets the total scroll movement value from the start position for the object.
Example	Sets the GButton00000 scroll total movement value in the self screen to 100. <code>GCSSetCaptionScrollPosition(-1, "GButton00000", 100);</code>

GCSGetCaptionScrollPosition	Get total scroll movement value
Syntax	<code>GCSGetCaptionScrollPosition(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Total movement value
Details	Gets the total scroll movement value from the start position for the object.
Example	Gets the GButton00000 scroll total movement value in the self screen in Stat. LONG Stat; Stat = GCSGetCaptionScrollPosition(-1, "GButton00000");
GCSIscaptionScrollFinish	Confirm caption scroll completion
Syntax	<code>GCSIscaptionScrollFinish(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Scroll finish status 0: scrolling 1: scrolling finish
Details	Gets the scroll finish status for the caption character string that is set in control.
Example	Gets the GButton00000 scroll finish status in the self screen in Stat. LONG Stat; Stat = GCSIscaptionScrollFinish(-1, "GButton00000");

GCSGEShowPanel	Change display panels
Syntax	GCSGEShowPanel(nWindowNo);
Argument	(i) LONG nWindowNo : screen No.
Return value	None
Details	Change to the panel with the specified screen No.
Example	Changes to the self screen panel. GCSGEShowPanel(-1);

GCSPrevPage	Switch to previous screen
Syntax	GCSPrevPage(nShowWindow);
Argument	(i) LONG nShowWindow : switch window displays
Return value	None
Details	According to the screen history, switch to the previous screen. One of the following values is set for nShowWindow. 0: does not switch 1: switches (Note) This function is valid only when the previous screen is the custom screen.
Example	Switches to the previous screen. GCSPrevPage(1);

GCSNextPage	Switch to next screen
Syntax	GCSNextPage(nShowWindow);
Argument	(i) LONG nShowWindow : switch window displays
Return value	None
Details	<p>According to the screen history, switch to the next screen.</p> <p>One of the following values is set for nShowWindow:</p> <ul style="list-style-type: none"> 0: does not switch 1: switches
Example	<p>Switches to the next screen.</p> <pre>GCSNextPage(1);</pre>

GCSCreateGWindow	Display window
Syntax	GCSCreateGWindow(nWindowNo);
Argument	(i) LONG nWindowNo : screen No.
Return value	None
Details	<p>Displays the window with the specified screen No.</p> <p>(Note) When using GCSCreateGWindow, write it at the end of the macro process.</p>
Example	<p>Show the screen No.20 window.</p> <pre>\$Button-OnPress NormalMethod(); GCSCloseForceGWindow(10); GCSCreateGWindow(20); \$End</pre>

GCSSetVisibleStatus	Switch show/hide of the control
Syntax	<code>GCSSetVisibleStatus(nWindowNo, strName, Status);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) Long Status : Show/hide
Return value	None
Details	Switches the control is displayed/hidden. One of the following values is set for Status: 0: Not displayed 1: Displayed
Example	Hides the <code>Gbutton0009.GCSSetVisibleStatus(-1,"GButton0009",0);</code>
GCSShowPanel	Switch flame
Syntax	<code>GCSShowPanel(nWindowNo, strName, Status);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) Long Status : frame page No.
Return value	None
Details	Switches page in the frame/view frame.
Example	Switches the Frame00001 frame to the frame page 1. <code>GCSShowPanel(-1,"Frame00001",1);</code>

5. Function Details

GCSCloseForceGWindow	Close window
Syntax	<code>GCSCloseForceGWindow (windowNo);</code>
Argument	(i)LONG windowNo : screen No.
Return value	None
Details	Closes the window of the specified screen No. When the window is closed, the events registered up until that point are abandoned.
Example	Closes the window of the screen No. 1. <code>GCSCloseForceWindow(1);</code>

GCSCloseGWindow	Close window
Syntax	<code>GCSCloseGWindow(windowNo);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) Long controlId : 0 fixed (i) Long IProcessID : process ID
Return value	None
Details	Closes the window of the designated screen No.
Example	Closes the window of the screen No. 1. <code>GCSCloseGWindow(1);</code>

GCSChangeActiveFocus	Change focus
Syntax	<code>GCSChangeActiveFocus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Changes the focus.
Example	Changes the focus to GButton00001. <code>GCSChangeActiveFocus(-1, "GButton00001");</code>

GCSSetSystemNumber	Set part system number
Syntax	<code>GCSSetSystemNumber(nWindowNo, strName, ISystem);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ISystem : part system number (1 or later)
Return value	None
Details	Sets the part system number. After the part system number is set, the control area is registered as a redraw area.
Example	Sets the GNXCounter00000 part system number in the self screen to 1. <code>GCSSetSystemNumber(-1, "GNXCounter00000", 1);</code>

GCSGetSystemNumber	Get part system number
Syntax	<code>GCSGetSystemNumber(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Part system number
Details	Gets the part system number.
Example	Gets the GNXCounter00000 part system number in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSGetSystemNumber(-1, "GNXCounter00000");</code>

GCSSetWindowBounds	Set position and size of window
Syntax	<code>GCSSetWindowBounds(nWindowNo, nX, nY, nWidth, nHeight);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. of window (i)LONG nX : upper left X coordinate of window ($0 \leq nX \leq 2559$) (i)LONG nY : upper left Y coordinate of window ($0 \leq nY \leq 1919$) (i)LONG nWidth : width of window ($1 \leq nWidth \leq 2560$) (i)LONG nHeight : height of window ($1 \leq nHeight \leq 1920$)
Return value	None
Details	Sets the position and size of window
Example	<p>Sets the position and size of window of the screen No. 6001.</p> <p>Upper left X coordinate: 1100 Upper left Y coordinate: 50 Width: 320 Height: 240 <code>GCSSetWindowBounds(6001, 1100, 50, 320, 240);</code></p>

GCSGetWindowBounds	Get position and size of window
Syntax	<code>GCSGetWindowBounds(nWindowNo, nX, nY, nWidth, nHeight);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. of window (o)LONG nX : upper left X coordinate of window (o)LONG nY : upper left Y coordinate of window (o)LONG nWidth : width of window (o)LONG nHeight : height of window
Return value	None
Details	Gets the position and size of window
Example	<p>Gets the position and size of window of the screen No. 6001.</p> <pre>LONG nX; LONG nY; LONG nWidth; LONG nHeight; GCSGetWindowBounds(6001, nX, nY, nWidth, nHeight);</pre>

5.3 Button

GCSButtonSetAction	Set button operations
Syntax	GCSButtonSetAction(nWindowNo, strName, ucAction);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucAction : button operation
Return value	None
Details	<p>Sets the button operation.</p> <p>One of the following values is set for ucAction:</p> <ul style="list-style-type: none"> 0: no operation 1: momentary operation 2: alternative operation <p>When a value outside of the range is set, there is no forced change of the setting.</p>
Example	<p>Sets the GButton00000 operations in the self screen to the momentary mode.</p> <pre>GCSButtonSetAction(-1, "GButton00000", 1);</pre>

GCSButtonGetAction	Get button operations
Syntax	GCSButtonGetAction(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: no operation 1: momentary operation 2: alternative operation Besides the above: illegal operation setting
Details	<p>Gets the button operation setting.</p> <p>When a setting outside the range is made, that setting value is returned.</p>
Example	<p>Gets the GButton00000 operations in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSButtonGetAction(-1, "GButton00000");</pre>

GCSButtonSetDisplay	Set button display
Syntax	<code>GCSButtonSetDisplay(nWindowNo, strName, ucDisplay);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucDisplay : button display
Return value	None
Details	<p>Sets the button display.</p> <p>One of the following values is set for ucDisplay:</p> <ul style="list-style-type: none"> 0: rectangle display 1: image display 3: round shape display <p>When a value outside of the range is set, there is no forced change of the setting.</p> <p>After the button display is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GButton00000 in the self screen to be displayed in a rectangle.</p> <pre>GCSButtonSetDisplay(-1, "GButton00000", 0);</pre>
GCSButtonGetDisplay	Get button display
Syntax	<code>GCSButtonGetDisplay(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: rectangle display 1: image display 3: round shape display Besides the above: illegal display setting
Details	<p>Gets the button display setting.</p> <p>When a setting outside the range is made, that setting value is returned.</p>
Example	<p>Gets the GButton00000 display setting in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSButtonGetDisplay(-1, "GButton00000");</pre>

GCSButtonSetBorderID	Set 3D border resource ID
Syntax	<code>GCSButtonSetBorderID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
Return value	None
Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
Example	Sets the GButton00000 3D border resource ID in the self screen to 1. <code>GCSButtonSetBorderID(-1, "GButton00000", 1);</code>

GCSButtonGetBorderID	Get 3D border resource ID
Syntax	<code>GCSButtonGetBorderID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	3D border resource ID
Details	Gets the 3D border resource ID.
Example	Gets the GButton00000 3D border resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSButtonGetBorderID(-1, "GButton00000");</code>

GCSButtonSetOnDesign	Set ON status design
Syntax	<code>GCSButtonSetOnDesign(nWindowNo, strName, gmDesign);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	<p>Sets the design for ON status. After the design for ON status is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GButton00000 ON status design in the self screen as follows:</p> <pre> Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2 mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetLong(mem, 12, 2); GCSButtonSetOnDesign(-1, "GButton00000", mem); GMEMDelete(mem);</pre>

GCSButtonGetOnDesign	Get ON status design
Syntax	<code>GCSButtonGetOnDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for ON status.
Example	<p>Gets the GButton00000 ON status design in the self screen as follows:</p> <p>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID</p> <pre>mem = GMEMCreate("TESTMEM", 16); GCSButtonGetOnDesign(-1, "GButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSButtonSetOffDesign	Set OFF status design
Syntax	GCSButtonSetOffDesign(nWindowNo, strName, gmDesign);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	Sets the design for OFF status. After the design for OFF status is set, the control area is registered as a redraw area.
Example	Sets the GButton00000 OFF status design in the self screen as follows: Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2 <pre>mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSButtonSetOffDesign(-1, "GButton00000", mem); GMEMDelete(mem);</pre>

GCSButtonGetOffDesign	Get OFF status design
Syntax	<code>GCSButtonGetOffDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for OFF status.
Example	<p>Gets the GButton00000 OFF status design in the self screen as follows:</p> <p>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID</p> <pre>mem = GMEMCreate("TESTMEM", 16); GCSButtonGetOffDesign(-1, "GButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSButtonSetFocusDesign	Set FOCUS status design
Syntax	<code>GCSButtonSetFocusDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	Sets the design for FOCUS status. After the design for FOCUS status is set, the control area is registered as a redraw area.
Example	<p>Sets the GButton00000 FOCUS status design in the self screen as follows:</p> <pre> Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2 mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSButtonSetFocusDesign(-1, "GButton00000", mem); GMEMDelete(mem);</pre>

GCSButtonGetFocusDesign	Get FOCUS status design
Syntax	<code>GCSButtonGetFocusDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for FOCUS status.
Example	<p>Gets the GButton00000 FOCUS status design in the self screen as follows:</p> <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSButtonGetFocusDesign(-1, "GButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSButtonSetDisableDesign	Set Disable status design
Syntax	<code>GCSButtonSetDisableDesign(nWindowNo, strName, gmDesign);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	<p>Sets the design for Disable status. After the design for Disable status is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GButton00000 Disable status design in the self screen as follows:</p> <pre> Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2 mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSButtonSetDisableDesign(-1, "GButton00000", mem); GMEMDelete(mem); </pre>

GCSButtonGetDisableDesign		Get Disable status design
Syntax	GCSButtonGetDisableDesign(nWindowNo, strName, gmDesign);	
Argument	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i) STRING strName	: control name
	(o) GMEM gmDesign	: global memory for design
Return value	Store the acquired design in gmDesign.	
Details	Gets the design for Disable status.	
Example	<p>Gets the GButton00000 Disable status design in the self screen as follows:</p> <p>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID</p> <pre>mem = GMEMCreate("TESTMEM", 16); GCSButtonGetDisableDesign(-1, "GButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>	

GCSButtonSetFontID	Set font resource ID
Syntax	<code>GCSButtonSetFontID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GButton00000 font resource ID in the self screen to 1. <code>GCSButtonSetFontID(-1, "GButton00000", 1);</code>
GCSButtonGetFontID	Get font resource ID
Syntax	<code>GCSButtonGetFontID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GButton00000 font resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat=GCSButtonGetFontID(-1,"GButton0000");</code>

GCSButtonSetStringID	Set caption character string resource ID
Syntax	<code>GCSButtonSetStringID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : caption character string resource ID
Return value	None
Details	Sets the caption character string resource ID. After the caption character string resource ID is set, the control area is registered as a redraw area.
Example	Sets the GButton00000 caption character string resource ID in the self screen to 1. <code>GCSButtonSetStringID(-1, "GButton00000", 1);</code>

GCSButtonGetStringID	Get caption character string resource ID
Syntax	<code>GCSButtonGetStringID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID
Details	Gets the caption character string resource ID.
Example	Gets the GButton00000 caption character string resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSButtonGetStringID(-1, "GButton00000");</code>

GCSButtonSetCaption	Set caption information
Syntax	GCSButtonSetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	<p>Sets caption information.</p> <p>After the caption information is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GButton00000 caption information in the self screen as follows:</p> <pre> Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 mem = GMEMCreate("TESTMEM", 14); GMEMSetLong(mem, 0, HFFFFF); GMEMSetChar(mem, 4, 0); GMEMSetChar(mem, 5, 1); GMEMSetShort(mem, 6, 10); GMEMSetShort(mem, 8, 0); GMEMSetShort(mem, 10, 0); GMEMSetShort(mem, 12, 0); GCSButtonSetCaption(-1, "GButton00000", mem); GMEMDelete(mem); </pre>

GCSButtonGetCaption	Get caption information
Syntax	GCSButtonGetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Store the acquired caption information in gmCaption.
Details	Gets the caption information.
Example	<p>Gets the GButton00000 caption information in the self screen as follows:</p> <pre> nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14); GCSButtonGetCaption(-1, "GButton00000", mem); nCol = GMEMGetLong(mem, 0); nHPos = GMEMGetChar(mem, 4); nHPos = GMEMGetChar(mem, 5); nLMgn = GMEMGetShort(mem, 6); nRMgn = GMEMGetShort(mem, 8); nTMgn = GMEMGetShort(mem, 10); nBMgn = GMEMGetShort(mem, 12); GMEMDelete(mem); </pre>

GCSButtonSetFocusEffect	Set effect during focus
Syntax	<code>GCSButtonSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect: 0: design change 1: no effect After the effect is set, the control area is registered as a redraw area.
Example	Sets the GButton00000 effect during focus in the self screen to 1. <code>GCSButtonSetFocusEffect(-1, "GButton00000", 1);</code>

GCSButtonGetFocusEffect	Get effect during focus
Syntax	<code>GCSButtonGetFocusEffect(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: design change 1: no effect Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GButton00000 effect during focus in the self screen in Stat. <code>LONG Stat; Stat = GCSButtonGetFocusEffect(-1, "GButton00000");</code>

GCSButtonSetStatus	Set object status
Syntax	<code>GCSButtonSetStatus(nWindowNo, strName, ucStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen) (i) STRING strName : control name (i) LONG ucStatus : object status
Return value	None
Details	Sets the GCBUTTON object ON/OFF status. One of the following values is set for ucStatus: 0: OFF status 1: ON status After the GCBUTTON object status is set, the control area is registered as a redraw area.
Example	Sets the GButton00000 ON/OFF status in the self screen to 1. <code>GCSButtonSetStatus(-1, "GButton00000", 1);</code>

GCSButtonGetStatus	Get object status
Syntax	<code>GCSButtonGetStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen) (i) STRING strName : control name
Return value	Object status 0: OFF status 1: ON status
Details	Gets the GCBUTTON object status.
Example	Gets the GButton00000 ON/OFF status in the self screen in Stat. LONG Stat; Stat = GCSButtonGetStatus(-1, "GButton00000");

5.4 CheckBox

GCSCheckboxSetBorderID	Set 3D border resource ID
 Syntax	GCSCheckboxSetBorderID(nWindowNo, strName, usID);
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
 Return value	None
 Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
 Example	Sets the GCheckBox00000 3D border resource ID in the self screen to 1. GCSCheckboxSetBorderID(-1, "GCheckBox00000", 1);

GCSCheckboxGetBorderID	Get 3D border resource ID
 Syntax	GCSCheckboxGetBorderID(nWindowNo, strName);
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	3D border resource ID
 Details	Gets the 3D border resource ID.
 Example	Gets the GCheckBox00000 3D border resource ID in the self screen in Stat. LONG Stat; Stat = GCSCheckboxGetBorderID(-1, "GCheckBox00000");

GCSCheckboxSetFontID	Set font resource ID
Syntax	<code>GCSCheckboxSetFontID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GCheckBox00000 font resource ID in the self screen to 1. <code>GCSCheckboxSetFontID(-1, "GCheckBox00000", 1);</code>

GCSCheckboxGetFontID	Get font resource ID
Syntax	<code>GCSCheckboxGetFontID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GCheckBox00000 font resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSCheckboxGetFontID(-1, "GCheckBox00000");</code>

GCSCheckboxSetStringID	Set caption character string resource ID
Syntax	<code>GCSCheckboxSetStringID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : caption character string resource ID
Return value	None
Details	Sets the caption character string resource ID. After the caption character string resource ID is set, the control area is registered as a redraw area.
Example	Sets the GCheckBox00000 caption character string font resource ID in the self screen to 1. <code>GCSCheckboxSetStringID(-1, "GCheckBox00000", 1);</code>

GCSCheckboxGetStringID	Get caption character string resource ID
Syntax	<code>GCSCheckboxGetStringID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID.
Details	Gets the caption character string resource ID.
Example	Gets the GCheckBox00000 caption character string font resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSCheckboxGetStringID(-1, "GCheckBox00000");</code>

GCSCheckboxSetCaption	Set caption information
Syntax	<code>GCSCheckboxSetCaption(nWindowNo, strName, gmCaption);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	<p>Sets the caption information All except character color are invalid. After the caption information is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GCheckBox00000 caption information in the self screen as follows:</p> <pre> Color : White (0xffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 mem = GMEMCreate("TESTMEM", 14); GMEMSetLong(mem, 0, HFFFFF); GMEMSetChar(mem, 4, 0); GMEMSetChar(mem, 5, 1); GMEMSetShort(mem, 6, 10); GMEMSetShort(mem, 8, 0); GMEMSetShort(mem, 10, 0); GMEMSetShort(mem, 12, 0); GCSCheckboxSetCaption(-1, "GCheckBox00000", mem); GMEMDelete(mem); </pre>

GCSCheckboxGetCaption	Get caption information
Syntax	<code>GCSCheckboxGetCaption(nWindowNo, strName, gmCaption);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Store the acquired caption information in gmCaption.
Details	<p>Gets the caption information setting. All settings except character color are invalid.</p>
Example	<p>Gets the GCheckBox00000 caption information in the self screen as follows:</p> <pre> nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14); GCSCheckboxGetCaption(-1, "GCheckBox00000", mem); nCol = GMEMGetLong(mem, 0); nHPos = GMEMGetChar(mem, 4); nHPos = GMEMGetChar(mem, 5); nLMgn = GMEMGetShort(mem, 6); nRMgn = GMEMGetShort(mem, 8); nTMgn = GMEMGetShort(mem, 10); nBMgn = GMEMGetShort(mem, 12); GMEMDelete(mem); </pre>

GCSCheckboxSetFocusEffect	Set effect during focus
Syntax	<code>GCSCheckboxSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect: 0: design change 1: no effect After the effect is set, the control area is registered as a redraw area.
Example	Sets the GCheckBox00000 effect during focus in the self screen to 1. <code>GCSCheckboxSetFocusEffect(-1, "GCheckBox00000", 1);</code>

GCSCheckboxGetFocusEffect	Get effect during focus
Syntax	<code>GCSCheckboxGetFocusEffect(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen) (i) STRING strName : control name
Return value	0: design change 1: no effect Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GCheckBox00000 effect during focus in the self screen in Stat. <code>LONG Stat; Stat = GCSCheckboxGetFocusEffect(-1, "GCheckBox00000");</code>

GCSCheckboxSetStatus	Set object status
Syntax	<code>GCSCheckboxSetStatus(nWindowNo, strName, ucStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucStatus : set object status
Return value	None
Details	<p>Sets the ON/OFF status for the GCCheckBox object.</p> <p>One of the following values is set for ucStatus:</p> <ul style="list-style-type: none"> 0: OFF status 1: ON status <p>After the object status is set, the control area is registered as a redraw area.</p>
Example	Sets the GCheckBox00000 ON/OFF status in the self screen to 1. <code>GCSCheckboxSetStatus(-1, "GCheckBox00000", 1);</code>

GCSCheckboxGetStatus	Get object status
Syntax	<code>GCSCheckboxGetStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Object status 0: OFF status 1: ON status
Details	Gets status for GCCheckBox object.
Example	Gets the GCheckBox00000 ON/OFF status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSCheckboxGetStatus(-1, "GCheckBox00000");</code>

GCSCheckboxSetBoxSize	Set box size
Syntax	GCSCheckboxSetBoxSize(nWindowNo, strName, lBoxSize);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG lBoxSize : check box size
Return value	None
Details	Sets the box size. After the box size is set, the control area is registered as a redraw area.
Example	Sets the GCheckBox00000 box size in the self screen to 10. GCSCheckboxSetBoxSize(-1, "GCheckBox00000", 10);

GCSCheckboxGetBoxSize	Get box size
Syntax	GCSCheckboxGetBoxSize(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Box size
Details	Gets the box size settings.
Example	Gets the GCheckBox00000 box size in the self screen in Stat. LONG Stat; Stat = GCSCheckboxGetBoxSize(-1, "GCheckBox00000");

GCSCheckboxSetBoxColor	Set box color
Syntax	<code>GCSCheckboxSetBoxColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : box color
Return value	None
Details	Sets the box color. After the box color is set, the control area is registered as a redraw area.
Example	Sets the GCheckBox00000 box color in the self screen to white (0xffffffff). <code>GCSCheckboxSetBoxColor(-1,"GCheckBox00000",HFFFFFF);</code>

GCSCheckboxGetBoxColor	Get box color
Syntax	<code>GCSCheckboxGetBoxColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Box color
Details	Gets the box color.
Example	Gets the GCheckBox00000 box color in the self screen in Stat. LONG Stat; Stat = GCSCheckboxGetBoxColor(-1, "GCheckBox00000");

GCSCheckboxSetFocusColor	Set background color during focus
 Syntax	<code>GCSCheckboxSetFocusColor(nWindowNo, strName, gcColor);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : background color during focus
 Return value	None
 Details	<p>Sets the background color in the case where the effect during focus is "change color".</p> <p>After the background color is set, the control area is registered as a redraw area.</p>
 Example	<p>Sets the GCheckBox00000 background color during focus in the self screen to white (0xffffffff).</p> <pre>GCSCheckboxSetFocusColor(-1, "GCheckBox00000", HFFFFFF);</pre>

GCSCheckboxGetFocusColor	Get background color during focus
 Syntax	<code>GCSCheckboxGetFocusColor(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Background color during focus
 Details	Gets the background color in the case where the effect during focus is "change color".
 Example	<p>Gets the GCheckBox00000 background color during focus in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSCheckboxGetFocusColor(-1, "GCheckBox00000");</pre>

GCSCheckboxSetDisableCaptionColor	Set character color when disabled
 Syntax	<code>GCSCheckboxSetDisableCaptionColor(nWindowNo, strName, gcColor);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : character color when disabled
 Return value	None
 Details	<p>Sets the character color during disabled control. After the character color is set, the control area is registered as a redraw area.</p>
 Example	<p>Sets the GCheckBox00000 character color when disabled in the self screen to white (0xffffffff).</p> <pre>GCSCheckboxSetDisableCaptionColor(-1, "GCheckBox00000", HFFFFFFF);</pre>

GCSCheckboxGetDisableCaptionColor	Get character color when disabled
 Syntax	<code>GCSCheckboxGetDisableCaptionColor(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Character color when disabled
 Details	Gets the character color during disabled control.
 Example	<p>Gets the GCheckBox00000 character color when disabled in the self screen in Stat.</p> <pre>LONG Stat; Stat=GCSCheckboxGetDisableCaptionColor(-1, "GCheckBox00000");</pre>

GCSCheckboxSetDisableBoxColor	Set box color when disabled
 Syntax	<code>GCSCheckboxSetDisableBoxColor(nWindowNo, strName, gcColor);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : box color
 Return value	None
 Details	<p>Sets the box color during disabled control. After the box color is set, the control area is registered as a redraw area.</p>
 Example	<p>Sets the GCheckBox00000 box color when disabled in the self screen to white (0xffffffff).</p> <pre>GCSCheckboxSetDisableBoxColor(-1, "GCheckBox00000", HFFFFFFF);</pre>

GCSCheckboxGetDisableBoxColor	Get box color when disabled
 Syntax	<code>GCSCheckboxGetDisableBoxColor(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Box color when disabled
 Details	Gets the box color during disabled control.
 Example	<p>Gets the GCheckBox00000 box color when disabled in the self screen in Stat.</p> <pre>LONG Stat; Stat=GCSCheckboxGetDisableBoxColor(-1, "GCheckBox00000");</pre>

5.5 Edit

GCSEditSetBorderID	Set 3D border resource ID
Syntax	GCSEditSetBorderID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No.(Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
Return value	None
Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
Example	Sets the GEdit00000 3D border resource ID in the self screen to 1. GCSEditSetBorderID(-1, "GEedit00000", 1);

GCSEditGetBorderID	Get 3D border resource ID
Syntax	GCSEditGetBorderID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No.(Specify -1 for self screen.) (i) STRING strName : control name
Return value	3D border resource ID
Details	Gets the 3D border resource ID setting.
Example	Gets the GEdit00000 3D border resource ID in the self screen in Stat. LONG Stat; Stat = GCSEditGetBorderID(-1, "GEedit00000");

GCSEditSetFontID	Set font resource ID
Syntax	GCSEditSetFontID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GEdit00000 font resource ID in the self screen to 1. GCSEditSetFontID(-1, "GEedit00000", 1);

GCSEditGetFontID	Get font resource ID
Syntax	GCSEditGetFontID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GEdit00000 font resource ID in the self screen in Stat. LONG Stat; Stat = GCSEditGetFontID(-1, "GEedit00000");

GCSEditAddString	Add character string
Syntax	GCSEditAddString(nWindowNo, strName, GTCHAR* pszString);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszString : character string to be added
Return value	0: processing failed 1: processing succeeded
Details	Adds the character string to the end.
Example	Adds the character string "ABCD" to the end of GEdit00000 in the self screen. LONG Stat; Stat = GCSEditAddString(-1, "GEedit00000", "ABCD");

GCSEditSetTextColor	Set character display color
Syntax	GCSEditSetTextColor(nWindowNo, strName, gcColor);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for character display color
Return value	None
Details	Sets the character display color.
Example	Sets the GEdit00000 character display color in the self screen to 0xffffffff. GCSEditSetTextColor(-1, "GEdit00000", HFFFFFF);

GCSEditGetTextColor	Get character display color
Syntax	GCSEditGetTextColor(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for character display color
Details	Gets the character display color.
Example	Gets the GEdit00000 character display color in the self screen in Stat. LONG Stat; Stat = GCSEditGetTextColor(-1, "Gedit00000");

GCSEditSetBackColor	Set background color
Syntax	<code>GCSEditSetBackColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for background color
Return value	None
Details	Sets the background color.
Example	Sets the GEdit00000 background color in the self screen to 0xffffffff. <code>GCSEditSetBackColor(-1, "GEedit00000", HFFFFFF);</code>

GCSEditGetBackColor	Get background color
Syntax	<code>GCSEditGetBackColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for background color
Details	Gets the background color.
Example	Gets the GEdit00000 background color in the self screen in Stat. LONG Stat; Stat = GCSEditGetBackColor(-1, "GEedit00000");

GCSEditSetBrush	Set brush
Syntax	GCSEditSetBrush(nWindowNo, strName, gmBrush);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmBrush : global memory for brush
Return value	1: processing succeeded 0: processing failed
Details	Sets the brush.
Example	Sets the GEdit00000 brush in the self screen as follows: Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 mem = GMEMCreate("TESTMEM", 12); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GCSEditSetBrush(-1, "GEdit00000", mem); GMEMDelete(mem);

GCSEditGetBrush	Get brush
Syntax	GCSEditGetBrush(nWindowNo, strName, gmBrush);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmBrush : global memory for brush
Return value	1: processing succeeded 0: processing failed
Details	Gets the brush.
Example	Gets the GEdit00000 brush in the self screen as follows: nPat : Fill pattern nFCol : Foreground color nBCol : Background color mem = GMEMCreate("TESTMEM", 12); GCSEditGetBrush(-1, "GEdit00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); GMEMDelete(mem);

GCSEditDeleteString	Delete character string
Syntax	GCSEditDeleteString(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Deletes all the character strings.
Example	Deletes all the GEdit00000 character strings in the self screen. GCSEditDeleteString(-1, "GEedit00000");

GCSEditAddLine	Add line
Syntax	GCSEditAddLine(nWindowNo, strName, pszLine);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszLine : line to be added
Return value	0: processing failed 1: processing succeeded
Details	Adds the character string as a new line at the end.
Example	Adds the line "ABCD" to the end of GEdit00000 in the self screen. GCSEditAddLine(-1, "GEedit00000", "ABCD");

GCSEditInsertLine	Insert line
Syntax	GCSEditInsertLine(nWindowNo, strName, pszLine, ulLine);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszLine : line to be inserted (i) LONG ulLine : line No.
Return value	0 : processing failed Other than 0 : number of lines inserted
Details	Inserts the character string as a new line at specified position.
Example	Inserts the line "ABCD" into the GEdit00000 line No.2 in the self screen. GCSEditInsertLine(-1, "GEedit00000", "ABCD", 2);

GCSEditDeleteLine	Delete line
Syntax	<code>GCSEditDeleteLine(nWindowNo, strName, ulLine);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ulLine : line No.
Return value	0: processing failed 1: processing succeeded
Details	Deletes the specified line.
Example	Deletes GEdit00000 line No.2 in the self screen. <code>GCSEditDeleteLine(-1, "GEedit00000", "ABCD", 2);</code>

GCSEditGetLineString	Get line character string
Syntax	<code>GCSEditGetLineString(nWindowNo, strName, ulLine, GTCHAR* pszString);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ulLine : line No. (o) STRING pszString : character string to be acquired
Return value	0: processing failed 1: processing succeeded
Details	Gets the maximum of 256byte character string for the specified line.
Example	Gets the contents of the GEdit00000 line No.2 in strStat. <code>STRING strStat;</code> <code>GCSEditGetLineString(-1, "GEedit00000", 2, strStat);</code>

GCSEditSetLineFeedCode	Set line feed character string
Syntax	<code>GCSEditSetLineFeedCode(nWindowNo, strName, ucLineFeedCode);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usLineFeedType : line feed character type
Return value	None
Details	<p>Sets the line feed character string type. One of the following values is set for usLineFeedType: 0:CR+LF 1:LF 2:CR</p>
Example	<p>Sets the GEdit00000 linefeed character string type in the self screen to CR+LF.</p> <pre>STRING strStat; GCSEditSetLineFeedCode(-1, "GEedit00000", 0);</pre>

GCSEditGetLineFeedCode	Get line feed character string
Syntax	<code>GCSEditGetLineFeedCode(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	<p>Line feed character string type 0:CR+LF 1:LF 2:CR</p>
Details	Gets the line feed character string type.
Example	<p>Gets the GEdit00000 line feed character string type in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSEditGetLineFeedCode(-1, "GEedit00000");</pre>

GCSEditSetCursor	Set cursor position
Syntax	GCSEditSetCursor(nWindowNo, strName, ulLine, ulIndex);
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ulLine : line No. (i) LONG ulIndex : index No.
Return value	<ul style="list-style-type: none"> 0: processing failed 1: processing succeeded
Details	Sets the cursor position to the specified position.
Example	<p>Sets the GEdit00000 cursor position in the self screen to line No.2 and index No.3.</p> <pre>GCSEditSetCursor(-1, "GEdit00000", 2, 3);</pre>

GCSEditGetCursor	Get cursor position
Syntax	GCSEditGetCursor(nWindowNo, strName, gmCurPos);
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCurPos : global memory for cursor position
Return value	<ul style="list-style-type: none"> 0: processing failed 1: processing succeeded
Details	Gets the cursor position.
Example	<p>Gets the GEdit00000 cursor position in the self screen as follows:</p> <pre>nLine : Line No. nIndex : Index No. LONG nLine; LONG nIndex; mem = GMEMCreate("TESTMEM", 8); GCSEditGetCursor(-1, "GEdit00000", mem); nLine = GMEMGetLong(mem, 0); nIndex = GMEMGetLong(mem, 4); GMEMDelete(mem);</pre>

GCSEditSetColor	Set foreground color
Syntax	GCSEditSetColor(nWindowNo, strName, gcColor);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for foreground color
Return value	None
Details	Sets the foreground color. After the foreground color is set, the control area is registered as a redraw area.
Example	Sets the GEdit00000 foreground color in the self screen to 0xffffffff. GCSEditSetColor(-1, "GEedit00000", HFFFFF);

GCSEditGetForeColor	Get foreground color
Syntax	GCSEditGetForeColor(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for foreground color
Details	Gets the foreground color.
Example	Gets the GEdit00000 foreground color in the self screen in Stat. LONG Stat; Stat = GCSEditGetForeColor(-1, "GEedit00000");

GCSEditSetFillPattern	Set fill pattern
Syntax	GCSEditSetFillPattern(nWindowNo, strName, nFillPattern);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nFillPattern : fill pattern
Return value	None
Details	Sets the fill pattern. After the fill pattern is set, the control area is registered as a redraw area.
Example	Sets the GEdit00000 fill pattern in the self screen to 2. GCSEditSetFillPattern(-1, "GEedit00000", 2);
GCSEditGetFillPattern	Get fill pattern
Syntax	GCSEditGetFillPattern(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Fill pattern
Details	Gets the fill pattern.
Example	Gets the GEdit00000 fill pattern in the self screen in Stat. LONG Stat; Stat = GCSEditGetFillPattern(-1, "GEedit00000");

GCSEditSetInsertMode	Set insert/overwrite mode
Syntax	<code>GCSEditSetInsertMode(nWindowNo, strName, nIsInsert);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nIsInsert : mode setting
Return value	None
Details	<p>Sets the insert/overwrite mode. One of the following values is set for nIsInsert: 1: insert mode 0: overwrite mode</p>
Example	<p>Sets the GEdit00000 insert/overwrite mode in the self screen to "overwrite" mode.</p> <pre>GCSEditSetInsertMode(-1, "GEedit00000", 1);</pre>

GCSEditGetInsertMode	Get insert/overwrite mode
Syntax	<code>GCSEditGetInsertMode(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	<ul style="list-style-type: none"> 1: insert mode 0: overwrite mode
Details	Gets the insert/overwrite mode.
Example	<p>Gets the GEdit00000 insert/overwrite mode in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSEditGetInsertMode(-1, "GEedit00000");</pre>

GCSEditSetLineBrush	Set line brush
Syntax	GCSEditSetLineBrush(nWindowNo, strName, gmBrush, ulLine);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmBrush : global memory for brush (i) LONG ulLine : line No.
Return value	None
Details	Sets the brush for the specified line.
Example	Sets the GEdit00000 line No.5 brush in the self screen as follows: Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 mem = GMEMCreate("TESTMEM", 12); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GCSEditSetLineBrush(-1, "GEedit00000", mem, 5); GMEMDelete(mem);

GCSEditGetLineBrush	Get line brush
Syntax	GCSEditGetLineBrush(nWindowNo, strName, gmBrush, ulLine);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmBrush : global memory for brush (i) LONG ulLine : line No.
Return value	1: processing succeeded 0: processing failed
Details	Gets the brush for the specified line.
Example	Gets the GEdit00000 line No.5 brush in the self screen as follows: <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color mem = GMEMCreate("TESTMEM", 12); GCSEditGetLineBrush(-1, "GEedit00000", mem, 5); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); GMEMDelete(mem);</pre>

GCSEditSetLineTextColor	Set line text display color
 Syntax	GCSEditSetLineTextColor(nWindowNo, strName, gcColor, ulLine);
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for text display color (i) LONG ulLine : line No.
 Return value	None
 Details	Sets the text display color for the specified line.
 Example	<p>Sets the GEdit00000 line No.5 text display color in the self screen to 0xffffffff.</p> <pre>GCSEditSetLineTextColor(-1, "GEdit00000", HFFFFF, 5);</pre>

GCSEditGetLineTextColor	Get line text display color
 Syntax	GCSEditGetLineTextColor(nWindowNo, strName, ulLine);
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Color code for text display color for specified line
 Details	Gets the text display color for the specified line.
 Example	<p>Gets the GEdit00000 line No.5 text display color in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSEditGetLineTextColor(-1, "GEdit00000", 5);</pre>

GCSEditGetLength	Get character length
Syntax	GCSEditGetLength(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Number of characters
Details	Gets the total current character length.
Example	Gets the GEdit00000 total character length in the self screen in Stat. LONG Stat; Stat = GCSEditGetLength(-1, "GEedit00000");

GCSEditFind	Search forward
Syntax	GCSEditFind(nWindowNo, strName, pszString, ulStartLine, ulStartIndex, gmFindPos);
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszString : character string for search (i) LONG ulStartLine : starting line for search (i) LONG ulStartIndex : starting position for search (o) GMEM gmFindPos : search result
Return value	<ul style="list-style-type: none"> 0: search failed 1: search succeeded
Details	Searchs the character string for search from the search starting position toward the end. Returns the position of the character string found first.
Example	<p>Searches GEdit00000 in the self screen under the following conditions:</p> <p>starting line for search : 3 starting position for search : 5 character string for search : "ABCD"</p> <p>Gets the result in:</p> <pre> nStat : search succeeded/failed nLine : searched line nIndex : searched position LONG nLine; LONG nIndex; LONG Stat; mem = GMEMCreate("TESTMEM", 8); Stat = GCSEditFind(-1, "GEedit00000", "ABCD", 3, 5, mem); nLine = GMEMGetLong(mem, 0); nIndex = GMEMGetLong(mem, 4); GMEMDelete(mem); </pre>

GCSEditReverseFind	Search backward
Syntax	GCSEditReverseFind(nWindowNo, strName, pszString, ulStartLine, ulstartIndex, gmFindPos);
Argument	(i) LONG nWindowNo : search No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszString : character string for search (i) LONG ulStartLine : starting line for search (i) LONG ulstartIndex : starting position for search (o) GMEM gmFindPos : search result
Return value	0: search failed 1: search succeeded
Details	Searches the character string for search from the search starting position toward the beginning. Returns the position of the character string found first.
Example	Searches GEdit00000 in the self screen under the following conditions: starting line for search : 3 starting position for search : 5 character string for search : "ABCD" Gets the result in: nStat : search succeeded/failed nLine : searched line nIndex : searched position LONG nLine; LONG nIndex; LONG Stat; mem = GMEMCreate("TESTMEM", 8); Stat = GCSEditReverseFind(-1, "GEdit00000", "ABCD", 3, 5, mem); nIndex = GMEMGetLong(mem, 0); GMEMDelete(mem);

GCSEditReplace	Replace character string
Syntax	GCSEditReplace(nWindowNo, strName, pszString, ulStartLine, ulstartIndex, ulSize);
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszString : replacement character string (i) LONG ulStartLine : starting line for replacement (i) LONG ulstartIndex : starting position for replacement (i) LONG ulSize : replacement size
Return value	<ul style="list-style-type: none"> 0: replacement failed 1: replacement succeeded
Details	Replaces the character string for the amount of replacement size from the replacement starting position.
Example	<p>Executes a replacement process for GEdit00000 in the self screen under the following conditions:</p> <ul style="list-style-type: none"> replacement character string : "ABCD" starting line for replacement : 3 starting position for replacement : 5 replacement size : 8 <p>Gets the replacement result in Stat.</p> <pre>LONG Stat; Stat = GCSEditReplace(-1, "GEedit00000", "ABCD", 3, 5, 8);</pre>

GCSEditReplaceAll	Replaces all character strings
Syntax	GCSEditReplaceAll(nWindowNo, strName, pszReplace, pszFind);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszReplace : replacement character string (i) STRING pszFind : character string for search
Return value	Number of replacements
Details	Searches the character string for search starting from the character string in the buffer and replaces it with the replacement character string.
Example	Executes an entire replacement process for GEdit00000 in the self screen under the following conditions: character string for search : "ABC" replacement character string : "12345" Gets the number of replacements in Stat. LONG Stat; Stat =GCSEditReplaceAll(-1, "GEedit00000", "12345", "ABC");

GCSEditInsertString	Insert character string
Syntax	GCSEditInsertString(nWindowNo, strName, pszString, ulLine, ullIndex);
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszString : character string to be inserted (i) LONG ulLine : line for insertion (i) LONG ullIndex : insertion position
Return value	<ul style="list-style-type: none"> 0: processing failed 1: processing succeeded
Details	Inserts character string.
Example	<p>Executes a character string insertion process for GEdit00000 in the self screen under the following conditions:</p> <ul style="list-style-type: none"> character string to be inserted : "ABCD" line for insertion : 3 insertion position : 5 <p>Gets the insertion result in Stat.</p> <pre>LONG Stat; Stat = GCSEditInsertString(-1, "GEedit00000", "ABCD", 3, 5);</pre>

GCSEditGetLineCount	Get number of lines
Syntax	GCSEditGetLineCount(nWindowNo, strName);
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Number of lines
Details	Gets the current number of lines.
Example	<p>Gets the number of GEdit00000 lines in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSEditGetLineCount(-1, "GEedit00000");</pre>

GCSEditRemoveString	Delete character string
Syntax	GCSEditRemoveString(nWindowNo, strName, uiRemoveSize);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG uiRemoveSize : size of character string for deletion
Return value	0: processing failed 1: processing succeeded
Details	Deletes character string from the end.
Example	Deletes a 4-character-long character string from the end of GEdit0000 in the self screen, then gets the result in Stat. LONG Stat; Stat = GCSEditRemoveString(-1, "GEedit0000", 4);

5.6 HtmlBrowser

GCSHtmlbrowserSetBorderID	Set 3D border resource ID
Syntax	GCSHtmlbrowserSetBorderID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
Return value	None
Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
Example	Sets the GHtmiBrowser00000 3D border resource ID in the self screen to 1. GCSHtmlbrowserSetBorderID(-1, "GHtmiBrowser00000", 1);

GCSHtmlbrowserGetBorderID	Get 3D border resource ID
Syntax	GCSHtmlbrowserGetBorderID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	3D border resource ID
Details	Gets the 3D border resource ID setting.
Example	Gets the GHtmiBrowser00000 3D border resource ID in the self screen in Stat. LONG Stat; Stat = GCSHtmlbrowserGetBorderID(-1, "GHtmiBrowser00000");

GCSHtmlbrowserSetFontID	Set font resource ID
Syntax	<code>GCSHtmlbrowserSetFontID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GHtmiBrowser00000 font resource ID in the self screen to 1. <code>GCSHtmlbrowserSetFontID(-1, "GHtmiBrowser00000", 1);</code>

GCSHtmlbrowserGetFontID	Get font resource ID
Syntax	<code>GCSHtmlbrowserGetFontID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font the resource ID
Details	Gets the font resource ID.
Example	Gets the GHtmiBrowser00000 font resource ID in the self screen in Stat. LONG Stat; Stat = GCSHtmlbrowserGetFontID(-1, "GHtmiBrowser00000");

GCSHtmbrowserSetScrollBarWidth	Set scroll bar width
Syntax	GCSHtmbrowserSetScrollBarWidth(nWindowNo, strName, ucScroolBarWidth);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucScrollBarWidth : scroll bar width
Return value	None
Details	Sets the scroll bar width. After the scroll bar width is set, the control area is registered as a redraw area.
Example	Sets the GHtmbrowser00000 scroll bar width in the self screen to 20. GCSHtmbrowserSetScrollBarWidth(-1, "GHtmbrowser00000", 20);

GCSHtmbrowserGetScrollBarWidth	Get scroll bar width
Syntax	GCSHtmbrowserGetScrollBarWidth(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Scroll bar width
Details	Gets the scroll bar width.
Example	Gets the GHtmbrowser00000 scroll bar width in the self screen in Stat. LONG Stat; Stat = GCSHtmbrowserGetScrollBarWidth(-1, "GHtmbrowser00000");

GCSHtmlbrowserSetTextColor	Set text display color
Syntax	<code>GCSHtmlbrowserSetTextColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for text display color
Return value	None
Details	Sets the text display color. After the text display color is set, the control area is registered as a redraw area.
Example	Sets the GHtmiBrowser00000 text color in the self screen to white (0xffffffff). <code>GCSHtmlbrowserSetTextColor(-1, "GHtmiBrowser00000", HFFFFFFF);</code>

GCSHtmlbrowserGetTextColor	Get text display color
Syntax	<code>GCSHtmlbrowserGetTextColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for text display color
Details	Gets the text display color.
Example	Gets the GHtmiBrowser00000 text color in the self screen in Stat. LONG Stat; Stat = GCSHtmlbrowserGetTextColor(-1, "GHtmiBrowser00000");

GCSHtmlbrowserSetBackColor	Set background color
Syntax	<code>GCSHtmlbrowserSetBackColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for background color
Return value	None
Details	Sets the background color. After the background color is set, the control area is registered as a redraw area.
Example	Sets the GHtmiBrowser00000 background color in the self screen to white (0xffffffff). <code>GCSHtmlbrowserSetBackColor(-1, "GHtmiBrowser00000", HFFFFFF);</code>

GCSHtmlbrowserGetBackColor	Get background color
Syntax	<code>GCSHtmlbrowserGetBackColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for background color
Details	Gets the background color.
Example	Gets the GHtmiBrowser00000 background color in the self screen in Stat. <code>LONG Stat; Stat = GCSHtmlbrowserGetBackColor(-1, "GHtmiBrowser00000");</code>

GCSHtmlbrowserSetColor	Set link color
Syntax	<code>GCSHtmlbrowserSetColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for link color
Return value	None
Details	Sets the link color. After the link color is set, the control area is registered as a redraw area.
Example	Sets the GHtmlBrowser00000 link color in the self screen to white (0xffffffff). <code>GCSHtmlbrowserSetColor(-1, "GHtmlBrowser00000", HFFFFFFF);</code>

GCSHtmlbrowserGetLinkColor	Get link color
Syntax	<code>GCSHtmlbrowserGetLinkColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for link color
Details	Gets the link color.
Example	Gets the GHtmlBrowser00000 link color in the self screen in Stat. LONG Stat; Stat = GCSHtmlbrowserGetLinkColor(-1, "GHtmlBrowser00000");

GCSHtmbrowserSetHtmlFileName	Set HTML file name
Syntax	<code>GCSHtmbrowserSetHtmlFileName(nWindowNo, strName, FileName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING FileName : HTML file name
Return value	None
Details	Sets the HTML file name. After the HTML file name is set, the read complete flag is cleared to 0 for reading again.
Example	Sets the GHtmbrowser00000 HTML file name in the self screen in "index.htm". <code>GCSHtmbrowserSetHtmlFileName(-1, "GHtmbrowser00000", "index.htm");</code>

GCSHtmbrowserGetHtmlFileName	Get HTML file name
Syntax	<code>GCSHtmbrowserGetHtmlFileName(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	HTML file name
Details	Gets the HTML file name.
Example	Gets the GHtmbrowser00000 HTML file name in the self screen in strStat. <code>STRING strStat; strStat = GCSHtmbrowserGetHtmlFileName(-1, "GHtmbrowser00000");</code>

5.7 Label

GCSLabelSetFontID	Set font resource ID
Syntax	<code>GCSLabelSetFontID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GLabel00000 font resource ID in the self screen to 1. <code>GCSLabelSetFontID(-1, "GLabel00000", 1);</code>

GCSLabelGetFontID	Get font resource ID
Syntax	<code>GCSLabelGetFontID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GLabel00000 font resource ID in the self screen in Stat. LONG Stat; Stat = GCSLabelGetFontID(-1, "GLabel00000");

GCSLabelSetStringID	Set caption character string resource ID
Syntax	<code>GCSLabelSetStringID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : caption character string resource ID
Return value	None
Details	Sets the caption character string resource ID. After the caption character string resource ID is set, the control area is registered as a redraw area.
Example	Sets the GLabel00000 caption character string resource ID in the self screen to 1. <code>GCSLabelSetStringID(-1, "GLabel00000", 1);</code>

GCSLabelGetStringID	Get caption character string resource ID
Syntax	<code>GCSLabelGetStringID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID
Details	Gets the caption character string resource ID.
Example	Gets the GLabel00000 caption character string resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSLabelGetStringID(-1, "GLabel00000");</code>

GCSLabelSetCaption	Set caption information
Syntax	GCSLabelSetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	Set caption information. After the caption information is set, the control area is registered as a redraw area.
Example	Sets the GLabel00000 caption information in the self screen as follows: Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 <pre> mem = GMEMCreate("TESTMEM", 14); GMEMSetLong(mem, 0, HFFFFF); GMEMSetChar(mem, 4, 0); GMEMSetChar(mem, 5, 1); GMEMSetShort(mem, 6, 10); GMEMSetShort(mem, 8, 0); GMEMSetShort(mem, 10, 0); GMEMSetShort(mem, 12, 0); GCSLabelSetCaption(-1, "GLabel00000", mem); GMEMDelete(mem); </pre>

GCSLabelGetCaption	Get caption information
Syntax	GCSLabelGetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Stores the acquired caption information in gmCaption.
Details	Gets the caption information.
Example	<p>Gets the GLabel00000 caption information in the self screen as follows:</p> <pre> nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14); GCSLabelGetCaption(-1, "GLabel00000", mem); nCol = GMEMGetLong(mem, 0); nHPos = GMEMGetChar(mem, 4); nHPos = GMEMGetChar(mem, 5); nLMgn = GMEMGetShort(mem, 6); nRMgn = GMEMGetShort(mem, 8); nTMgn = GMEMGetShort(mem, 10); nBMgn = GMEMGetShort(mem, 12); GMEMDelete(mem); </pre>

5.8 List

GCSListSetBorderID	Set 3D border resource ID
Syntax	<code>GCSListSetBorderID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
Return value	None
Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
Example	Sets the GList00000 3D border resource ID in the self screen to 1. <code>GCSListSetBorderID(-1, "GList00000", 1);</code>

GCSListGetBorderID	Get 3D border resource ID
Syntax	<code>GCSListGetBorderID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	3D border resource ID
Details	Gets the 3D border resource ID
Example	Gets the GList00000 3D border resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSListGetBorderID(-1, "GList00000");</code>

GCSListSetFontID	Set font resource ID
Syntax	GCSListSetFontID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GLIST00000 font resource ID in the self screen to 1. GCSListSetFontID(-1, "GLIST00000", 1);

GCSListGetFontID	Get font resource ID
Syntax	GCSListGetFontID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GLIST00000 font resource ID in the self screen in Stat. LONG Stat; Stat = GCSListGetFontID(-1, "GLIST00000");

GCSListSetCaption	Set caption information
Syntax	GCSListSetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	Set caption information. After the caption information is set, the control area is registered as a redraw area.
Example	Sets the GLIST00000 caption information in the self screen as follows: Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 <pre> mem = GMEMCreate("TESTMEM", 14); GMEMSetLong(mem, 0, HFFFFF); GMEMSetChar(mem, 4, 0); GMEMSetChar(mem, 5, 1); GMEMSetShort(mem, 6, 10); GMEMSetShort(mem, 8, 0); GMEMSetShort(mem, 10, 0); GMEMSetShort(mem, 12, 0); GCSListSetCaption(-1, "GLIST00000", mem); GMEMDelete(mem); </pre>

GCSListGetCaption	Get caption information
Syntax	GCSListGetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Stores the acquired caption information in gmCaption.
Details	Gets the caption information setting.
Example	<p>Gets the GList00000 caption information in the self screen as follows:</p> <pre> nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14); GCSListGetCaption(-1, "GList00000", mem); nCol = GMEMGetLong(mem, 0); nHPos = GMEMGetChar(mem, 4); nHPos = GMEMGetChar(mem, 5); nLMgn = GMEMGetShort(mem, 6); nRMgn = GMEMGetShort(mem, 8); nTMgn = GMEMGetShort(mem, 10); nBMgn = GMEMGetShort(mem, 12); GMEMDelete(mem); </pre>

GCSListSetFocusColor	Set background color during focus
Syntax	<code>GCSListSetFocusColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for background color during
Return value	None
Details	Sets the background color during focus. After the background color is set, the control area is registered as a redraw area.
Example	Sets the GList00000 background color during focus in the self screen to white (0xffffffff). <code>GCSListSetFocusColor(-1, "GList00000", HFFFFFF);</code>

GCSListGetFocusColor	Get background color during focus
Syntax	<code>GCSListGetFocusColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for background color during focus
Details	Gets the background color during focus.
Example	Gets the GList00000 background color during focus in the self screen in Stat. LONG Stat; Stat = GCSListGetFocusColor(-1, "GList00000");

GCSListSetScrollButtonColor	Set scroll button color
Syntax	<code>GCSListSetScrollButtonColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for scroll button color
Return value	None
Details	Sets the scroll button color. After the scroll button color is set, the control area is registered as a redraw area.
Example	Sets the GList00000 scroll button color in the self screen to white (0xffffffff). <code>GCSListSetScrollButtonColor(-1, "GList00000", HFFFFFF);</code>

GCSListGetScrollButtonColor	Get scroll button color
Syntax	<code>GCSListGetScrollButtonColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code
Details	Gets the scroll button color.
Example	Gets the GList00000 scroll button color in the self screen in Stat. LONG Stat; <code>Stat = GCSListGetScrollButtonColor(-1, "GList00000");</code>

GCSListSetScrollBarColor	Set scroll bar color
Syntax	<code>GCSListSetScrollBarColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for scroll bar color
Return value	None
Details	<p>Sets the scroll bar color.</p> <p>After the scroll bar color is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GList00000 scroll bar color in the self screen to white (0xffffffff).</p> <code>GCSListSetScrollBarColor(-1, "GList00000", HFFFFFF);</code>

GCSListGetScrollBarColor	Get scroll bar color
Syntax	<code>GCSListGetScrollBarColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code
Details	Gets the scroll bar color.
Example	<p>Gets the GList00000 scroll bar color in the self screen in Stat.</p> <code>LONG Stat;</code> <code>Stat = GCSListGetScrollBarColor(-1, "GList00000");</code>

GCSListSetNormalColor	Set normal background color
Syntax	GCSListSetNormalColor(nWindowNo, strName, gcColor);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for normal background color
Return value	None
Details	Sets the normal background color. After the normal background color is set, the control area is registered as a redraw area.
Example	Sets the GList00000 normal background color in the self screen to white (0xffffffff). GCSListSetNormalColor(-1, "GList00000", HFFFFFF);
GCSListGetNormalColor	Get normal background color
Syntax	GCSListGetNormalColor(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for normal background color
Details	Gets the normal background color.
Example	Gets the GList00000 normal background color in the self screen in Stat. LONG Stat; Stat = GCSListGetNormalColor(-1, "GList00000");

GCSListSetDisableColor	Set background color when disabled
 Syntax	<code>GCSListSetDisableColor(nWindowNo, strName, gcColor);</code>
 Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(i) LONG gcColor : color code for background color when disabled</p>
 Return value	None
 Details	<p>Sets the background color when disabled.</p> <p>After the background color is set, the control area is registered as a redraw area.</p>
 Example	<p>Sets the GList00000 background color when disabled in the self screen to white (0xffffffff).</p> <p><code>GCSListSetDisableColor(-1, "GList00000", HFFFFFF);</code></p>

GCSListGetDisableColor	Get background color when disabled
 Syntax	<code>GCSListGetDisableColor(nWindowNo, strName);</code>
 Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p>
 Return value	Color code for background color setting when disabled
 Details	Gets the background color when disabled.
 Example	<p>Gets the GList00000 background color when disabled in the self screen in Stat.</p> <p>LONG Stat;</p> <p><code>Stat = GCSListGetDisableColor(-1, "GList00000");</code></p>

GCSListSetScrollBarWidth	Set scroll bar width
Syntax	<code>GCSListSetScrollBarWidth(nWindowNo, strName, ucScroolBarWidth);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucScrollBarWidth : scroll bar width
Return value	None
Details	Sets the scroll bar width. After the scroll bar width is set, the control area is registered as a redraw area.
Example	Sets the GList00000 scroll bar width in the self screen to 20. <code>GCSListSetScrollBarWidth(-1, "GList00000", 20);</code>

GCSListGetScrollBarWidth	Get scroll bar width
Syntax	<code>GCSListGetScrollBarWidth(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Scroll bar width
Details	Gets the scroll bar width.
Example	Gets the GList00000 scroll bar width in the self screen in Stat. LONG Stat; Stat = GCSListGetScrollBarWidth(-1, "GList00000");

GCSListSetSelectBarColor	Set selection bar color
Syntax	<code>GCSListSetSelectBarColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for selection bar color
Return value	None
Details	Sets the selection bar color. After the selection bar color is set, the control area is registered as a redraw area.
Example	Sets the GList00000 select bar color in the self screen to white (0xffffffff) <code>GCSListSetSelectBarColor(-1, "GList00000", HFFFFFF);</code>
GCSListGetSelectBarColor	Get selection bar color
Syntax	<code>GCSListGetSelectBarColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for selection bar
Details	Gets the selection bar color.
Example	Gets the GList00000 select bar in the self screen in Stat. LONG Stat; <code>Stat = GCSListGetSelectBarColor(-1, "GList00000");</code>

GCSListSetMaxListLines	Set maximum number of lines in list
Syntax	<code>GCSListSetMaxListLines(nWindowNo, strName, usMaxListLines);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usMaxListLines : maximum number 0 to 32767
Return value	None
Details	Sets the maximum number of lines for list control. The range of settings is 0 to 32767. When the maximum number of lines for display that is set is less than the number of lines in a particular list already registered, the character strings in the list that are over the setting are deleted.
Example	Sets the maximum number of GList00000 lines in the self screen to 20. <code>GCSListSetMaxListLines(-1, "GList00000", 20);</code>

GCSListGetMaxListLines	Get maximum number of lines in list
Syntax	<code>GCSListGetMaxListLines(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Maximum number of lines in list
Details	Gets the maximum number of lines for list control.
Example	Gets the maximum number of GList00000 lines in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSListGetMaxListLines(-1, "GList00000");</code>

GCSListAddString	Add list character string
Syntax	<code>GCSListAddString(nWindowNo, strName, pszString);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszString : character string to be added
Return value	-1 : addition failed 0 or more : line added
Details	Adds a character string to the end of a list.
Example	Adds the character string "ABCD" to the end of GList00000 in the self screen, and gets the result in Stat. <code>LONG Stat;</code> <code>GCSListAddString(-1, "GList00000", "ABCD");</code>

GCSListInsertString	Insert list character string
Syntax	<code>GCSListInsertString(nWindowNo, strName, nIndex, pszString);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nIndex : line No. for insertion (-1: add at the end) (i) STRING pszString : character string to be added
Return value	-1 : addition failed 0 or more : line added
Details	Adds a character string to the specified line in a list. Specifies a line No. to be added to nIndex. When -1 is specified in nIndex, it is added to the end of the list. When the line specified by nIndex does not exist, it is an addition failure.
Example	Adds "ABCD" to the GList00000 list's line No.5 in the self screen, and gets the result in Stat. <code>LONG Stat;</code> <code>Stat = GCSListInsertString(-1, "GList00000", 5, "ABCD");</code>

GCSListGetLineCount	Get number of lines in list
Syntax	<code>GCSListGetLineCount(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Current number of lines in list
Details	Gets the current number of lines in a list.
Example	Gets the number of GList00000 lists in the self screen in Stat. LONG Stat; Stat = GCSListGetLineCount(-1, "GList00000");

GCSListRemoveString	Delete list character string
Syntax	<code>GCSListRemoveString(nWindowNo, strName, nIndex);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) short nIndex : line No. for deletion
Return value	0: deletion failed 1: deletion succeeded
Details	Deletes the character string for the specified line in a list.
Example	Deletes the contents of GList00000 list's line No.5 in the self screen, and gets the result in Stat. LONG Stat; Stat = GCSListRemoveString(-1, "GList00000", 5);

GCSListGetString	Get list character string
Syntax	<code>GCSListGetString(nWindowNo, strName, nIndex, pszString);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nIndex : acquired number of lines (i) STRING pszString : character string to be acquired
Return value	None
Details	Gets the maximum of 256byte character string for the specified line in the list.
Example	Gets the contents of GList00000 line No.2 in the self screen in strStat. <code>STRING strStat;</code> <code>GCSListGetString(-1, "GList00000", 2, strStat);</code>

GCSListRemoveAllStrings	Delete all list character strings
Syntax	<code>GCSListRemoveAllStrings(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Deletes all the character strings in a list.
Example	Deletes all the GList00000 list character string in the self screen. <code>GCSListRemoveAllStrings(-1, "GList00000");</code>

GCSListSetCurrentSelect	Set selected line
Syntax	<code>GCSListSetCurrentSelect(nWindowNo, strName, nSel);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nSel : selected line setting
Return value	0: setting failed (illegal setting) 1: setting succeeded
Details	Sets the selected line in a list. When -1 is set in nSel, there is no selected line. When the maximum number of lines is set, 0 is returned as a return value.
Example	Sets 3 for the GList00000 currently selected line in the screen display No.10. <code>GCSListSetCurrentSelect(-1, "GList00000", 3);</code>

GCSListGetCurrentSelect	Get selected line
Syntax	<code>GCSListGetCurrentSelect(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0 or more : current selected line -1 : no selection
Details	Gets the selected line in a list.
Example	Gets the GList00000 currently selected line in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSListGetCurrentSelect(-1, "GList00000");</code>

GCSListSetVisibleScrollBarStatus	Set scroll bar display/non-display status
Syntax	<code>GCSListSetVisibleScrollBarStatus(nWindowNo, strName, fStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) short fStatus : display/non-display status
Return value	None
Details	Sets the display/non-display status for the scroll bar. When switching the display/non-display, the object area is registered as a redraw area. One of the following values is set for fStatus: 0: non-display 1: display
Example	Sets 1 for the GLIST00000 scroll bar display/non-display status in the self screen. <code>GCSListSetVisibleScrollBarStatus(-1, "GLIST00000", 1);</code>

GCSListGetVisibleScrollBarStatus	Get scroll bar display/non-display status
Syntax	<code>GCSListGetVisibleScrollBarStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: non-display 1: display
Details	Gets the display/non-display status for the scroll bar.
Example	Gets the GLIST00000 scroll bar display/non-display status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSListGetVisibleScrollBarStatus(-1, "GLIST00000");</code>

GCSListSetEnableScrollBarStatus	Set scroll bar controllable or uncontrollable status
 Syntax	<code>GCSListSetEnableScrollBarStatus(nWindowNo, strName, fStatus);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : controllable or not controllable status
 Return value	None
 Details	<p>Sets the controllable or uncontrollable status for the scroll bar. Controllability with mouse input or key input is determined according to this flag. One of the following values is set for fStatus:</p> <ul style="list-style-type: none"> 0: uncontrollable 1: controllable
 Example	<p>Sets 1 for the GList00000 scroll bar controllable/uncontrollable status in the self screen.</p> <pre>GCSListSetEnableScrollBarStatus(-1, "GList00000", 1);</pre>

GCSListGetEnableScrollBarStatus	Get scroll bar controllable or uncontrollable status
 Syntax	<code>GCSListGetEnableScrollBarStatus(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	<ul style="list-style-type: none"> 0: uncontrollable 1: controllable
 Details	Gets the controllable or uncontrollable status for the scroll bar.
 Example	<p>Gets the GList00000 scroll bar controllable/uncontrollable status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSListGetEnableScrollBarStatus(-1, "GList00000");</pre>

GCSListSetTopLine	Set list top line
Syntax	<code>GCSListSetTopLine(nWindowNo, strName, lIndex);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG lIndex : top line No.
Return value	None
Details	Sets the top line of the list. When a value outside of the range is set, it is changed to the smallest line or the largest line.
Example	Sets 3 for the GList00000 list top line in the self screen. <code>GCSListSetTopLine(-1, "GList00000", 3);</code>
GCSListGetTopLine	Get list top line
Syntax	<code>GCSListGetTopLine(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Top line No.
Details	Gets the current first line in a list.
Example	Gets the GList00000 list top line in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSListGetTopLine(-1, "GList00000");</code>

5.9 Picture

GCSPictureSetDisplay	Set picture display
Syntax	GCSPictureSetDisplay(nWindowNo, strName, ucDisplay);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucDisplay : picture display
Return value	None
Details	<p>Sets the picture display. One of the following values is set for ucDisplay: 0: rectangle display 1: (oval) circle shape display 2: image display When a value outside of the range is set, there is no forced change of the setting. After the picture display is set, the control area is registered as a redraw area.</p>
Example	Sets the GPicture00000 display setting in the self screen to 0. GCSPictureSetDisplay(-1, "GPicture00000", 0);

GCSPictureGetDisplay	Get picture display
Syntax	GCSPictureGetDisplay(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: rectangle display 1: (oval) circle shape display 2: image display Besides the above : illegal display setting
Details	<p>Gets the picture display setting. When a setting outside the range is made, that setting value is returned.</p>
Example	Sets the GPicture00000 display setting in the self screen in Stat. LONG Stat; Stat = GCSPictureGetDisplay(-1, "GPicture00000");

GCSPictureSetBorderID	Set 3D border resource ID
 Syntax	<code>GCSPictureSetBorderID(nWindowNo, strName, usID);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
 Return value	None
 Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
 Example	Sets the GPicture00000 3D border resource ID in the self screen to 1. <code>GCSPictureSetBorderID(-1, "GPicture00000", 1);</code>
GCSPictureGetBorderID	Get 3D border resource ID
 Syntax	<code>GCSPictureGetBorderID(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	3D border resource ID
 Details	Gets the 3D border resource ID.
 Example	Gets the GPicture00000 3D border resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSPictureGetBorderID(-1, "GPicture00000");</code>

GCSPictureSetFontID	Set font resource ID
Syntax	GCSPictureSetFontID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GPicture00000 font resource ID in the self screen to 1. GCSPictureSetFontID(-1, "GPicture00000", 1);

GCSPictureGetFontID	Get font resource ID
Syntax	GCSPictureGetFontID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GPicture00000 font resource ID in the self screen in Stat. LONG Stat; Stat = GCSPictureGetFontID(-1, "GPicture00000");

GCSPictureSetStringID	Set caption character string resource ID
Syntax	<code>GCSPictureSetStringID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : caption character string resource ID
Return value	None
Details	Sets the caption character string resource ID. After the caption character string resource ID is set, the control area is registered as a redraw area.
Example	Sets the GPicture00000 caption character string resource ID in the self screen to 1. <code>GCSPictureSetStringID(-1, "GPicture00000", 1);</code>

GCSPictureGetStringID	Get caption character string resource ID
Syntax	<code>GCSPictureGetStringID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID
Details	Gets the caption character string resource ID.
Example	Gets the GPicture00000 caption character string resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSPictureGetStringID(-1, "GPicture00000");</code>

GCSPictureSetCaption	Set caption information
Syntax	GCSPictureSetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	Sets the caption information. After the caption information is set, the control area is registered as a redraw area.
Example	Sets the GPicture00000 caption information in the self screen as follows: Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 <pre> mem = GMEMCreate("TESTMEM", 14); GMEMSetLong(mem, 0, HFFFFF); GMEMSetChar(mem, 4, 0); GMEMSetChar(mem, 5, 1); GMEMSetShort(mem, 6, 10); GMEMSetShort(mem, 8, 0); GMEMSetShort(mem, 10, 0); GMEMSetShort(mem, 12, 0); GCSPictureSetCaption(-1, "GPicture00000", mem); GMEMDelete(mem); </pre>

GCSPictureGetCaption	Get caption information
Syntax	GCSPictureGetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Stores acquired caption information in gmCaption.
Details	Gets the caption information.
Example	<p>Gets the GPicture00000 caption information in the self screen as follows:</p> <pre> nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14); GCSPictureGetCaption(-1, "GPicture00000", mem); nCol = GMEMGetLong(mem, 0); nHPos = GMEMGetChar(mem, 4); nHPos = GMEMGetChar(mem, 5); nLMgn = GMEMGetShort(mem, 6); nRMgn = GMEMGetShort(mem, 8); nTMgn = GMEMGetShort(mem, 10); nBMgn = GMEMGetShort(mem, 12); GMEMDelete(mem); </pre>

GCSPictureSetStatus	Set object display status
Syntax	GCSPictureSetStatus(nWindowNo, strName, ucStatus);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucStatus : object status setting
Return value	None
Details	Sets the GCPicture object display status. After the object display status is set, the control area is registered as a redraw area.
Example	Sets the GPicture00000 display status in the self screen to 3. GCSPictureSetStatus(-1, "GPicture00000", 3);

GCSPictureGetStatus	Get object display status
Syntax	GCSPictureGetStatus(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	None
Details	Gets the GCPicture object display status.
Example	Gets the GPicture00000 display status in the self screen in Stat. LONG Stat; Stat = GCSPictureGetStatus(-1, "GPicture00000");

5.10 ProgressBar

<code>GCSProgressbarSetBackGroundDesign</code>	Set background design
Syntax	<code>GCSProgressbarSetBackGroundDesign(nWindowNo, strName, gmDesign);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	<p>Sets the background design for the progress bar. After the background design is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GProgressBar00000 background design in the self screen as follows:</p> <pre> Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x00000000 Image resource ID : 2 mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFFFFFFF); GMEMSetLong(mem, 8, H00000000); GMEMSetLong(mem, 12, 2); GCSProgressbarSetBackGroundDesign(-1, "GProgressBar00000", mem); GMEMDelete(mem); </pre>

GCSProgressbarGetBackGroundDesign	Get background design
Syntax	<pre>GCSProgressbarGetBackGroundDesign(nWindowNo, strName, gmDesign);</pre>
Argument	<ul style="list-style-type: none">(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)(i) STRING strName : control name(o) GMEM gmDesign : global memory for design
Return value	Stores acquired design in gmDesign.
Details	Gets the background design for the progress bar.
Example	<p>Gets the GProgressBar00000 background design in the self screen as follows:</p> <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSProgressbarGetBackGroundDesign(-1, "GProgressBar00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSProgressbarSetBarDesign	Set bar design
Syntax	GCSProgressbarSetBarDesign(nWindowNo, strName, gmDesign);
Argument	<ul style="list-style-type: none">(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)(i) STRING strName : control name(i) GMEM gmDesign : global memory for design
Return value	None
Details	<p>Sets the design for the progress bar. After the bar design is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GProgressBar00000 design in the self screen as follows:</p> <pre>Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2 mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFFFFFFF); GMEMSetLong(mem, 8, H00000000); GMEMSetLong(mem, 12, 2); GCSProgressbarSetBarDesign(-1, "GProgressBar00000", mem); GMEMDelete(mem);</pre>

GCSProgressbarGetBarDesign	Get bar design
Syntax	<code>GCSProgressbarGetBarDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Stores acquired design in gmDesign.
Details	Gets the design for the progress bar.
Example	Gets the GProgressBar00000 design in the self screen as follows: <code>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSProgressbarGetBarDesign(-1, "GProgressBar00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</code>

GCSProgressbarSetRange	Set progress bar range
Syntax	<code>GCSProgressbarSetRange(nWindowNo, strName, IMin, IMax);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG IMin : minimum value (i) LONG IMax : maximum value
Return value	None
Details	<p>Sets the range for the progress bar. When the smallest value and largest value settings are inverted, they are reversed.</p>
Example	<p>Sets the GProgressBar00000's minimum value to 0 and the maximum value to 10 in the self screen.</p> <pre><code>GCSProgressbarSetRange(-1, "GProgressBar00000", 0, 10);</code></pre>

GCSProgressbarGetRange	Get progress bar range
Syntax	<code>GCSProgressbarGetRange(nWindowNo, strName, gmRange);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmRange : global memory for range
Return value	None
Details	Gets the range for the progress bar.
Example	<p>Gets the GProgressBar00000 range in the self screen as follows:</p> <pre><code>nMin : Minimum value nMax : Maximum value SHORT nMin; SHORT nMax; mem = GMEMCreate("TESTMEM", 4); GCSProgressbarGetRange(-1, "GProgressBar00000", mem); nMin = GMEMGetShort(mem, 0); nMax = GMEMGetShort(mem, 2); GMEMDelete(mem);</code></pre>

5. Function Details

GCSProgressbarSetDirection	Set fill direction
Syntax	<code>GCSProgressbarSetDirection(nWindowNo, strName, ucDirection);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucDirection : fill direction
Return value	None
Details	<p>Sets the fill direction for the progress bar. One of the followings is set for ucDirection:</p> <ul style="list-style-type: none"> 0: left to right 1: right to left 2: top to bottom 3: bottom to top <p>When a value outside of the range is set, there is no forced change of the setting. After the fill direction is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GProgressBar00000 fill direction in the self screen to 0. <code>GCSProgressbarSetDirection(-1, "GProgressBar00000", 0);</code></p>

GCSProgressbarGetDirection	Get fill direction
Syntax	<code>GCSProgressbarGetDirection(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	<ul style="list-style-type: none"> 0: left to right 1: right to left 2: top to bottom 3: bottom to top <p>Besides the above: illegal display setting</p>
Details	Gets the fill direction setting.
Example	<p>Gets the GProgressBar00000 fill direction in the self screen in Stat. <code>Stat = GCSProgressbarGetDirection(-1, "GProgressBar00000");</code></p>

GCSProgressbarSetValue	Set current progress bar value
Syntax	GCSProgressbarSetValue(nWindowNo, strName, nValue);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nValue : current value
Return value	None
Details	Sets the current value for the progress bar. The permissible range for the setting is the range specified by SetRange, and values outside of the range become the maximum value. or the minimum value.
Example	Sets 10 for the GProgressBar00000 current value in the self screen. GCSProgressbarSetValue(-1, "GProgressBar00000", 10);

GCSProgressbarGetValue	Get current progress bar value
Syntax	GCSProgressbarGetValue(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Current value for the progress bar
Details	Gets the current value for the progress bar.
Example	Gets the GProgressBar00000 current value in the self screen in Stat. GCSProgressbarGetValue(-1, "GProgressBar00000", 10);

5.11 RadioButton

GCSRadiobuttonSetBorderID	Set 3D border resource ID
Syntax	<code>GCSRadiobuttonSetBorderID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
Return value	None
Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
Example	Sets the GRadioButton00000 3D border resource ID in the self screen to 1. <code>GCSRadiobuttonSetBorderID(-1, "GRadioButton00000", 1);</code>

GCSRadiobuttonGetBorderID	Get 3D border resource ID
Syntax	<code>GCSRadiobuttonGetBorderID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	3D border resource ID
Details	Gets the 3D border resource ID setting.
Example	Gets the GRadioButton00000 3D border resource ID in the self screen in Stat. <code>LONG Stat; Stat = GCSRadiobuttonGetBorderID(-1, "GRadioButton00000");</code>

GCSRadiobuttonSetFontID	Set font resource ID
Syntax	GCSRadiobuttonSetFontID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GRadioButton00000 font resource ID in the self screen to 1. GCSRadiobuttonSetFontID(-1, "GRadioButton00000", 1);

GCSRadiobuttonGetFontID	Get font resource ID
Syntax	GCSRadiobuttonGetFontID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GRadioButton00000 font resource ID in the self screen in Stat. LONG Stat; Stat = GCSRadiobuttonGetFontID(-1, "GRadioButton00000");

GCSRadiobuttonSetStringID	Set caption character string resource ID
Syntax	<code>GCSRadiobuttonSetStringID(nWindowNo, strName, usID);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : caption character string resource ID
Return value	None
Details	<p>Sets the caption character string resource ID. After the caption character string resource ID is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GRadioButton00000 caption character string resource ID in the self screen to 1. <code>GCSRadiobuttonSetStringID(-1, "GRadioButton00000", 1);</code></p>

GCSRadiobuttonGetStringID	Get caption character string resource ID
Syntax	<code>GCSRadiobuttonGetStringID(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID
Details	Gets the caption character string resource ID.
Example	<p>Gets the GRadioButton00000 caption character string resource ID in the self screen in Stat. LONG Stat; <code>Stat = GCSRadiobuttonGetStringID(-1, "GRadioButton00000");</code></p>

GCSRadiobuttonSetCaption	Set caption information
Syntax	<code>GCSRadiobuttonSetCaption(nWindowNo, strName, gmCaption);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	<p>Sets the caption information. All except character color are disabled. After the caption information is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GRadioButton00000 caption information in the self screen as follows:</p> <pre> Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 mem = GMEMCreate("TESTMEM", 14); GMEMSetLong(mem, 0, HFFFFF); GMEMSetChar(mem, 4, 0); GMEMSetChar(mem, 5, 1); GMEMSetShort(mem, 6, 10); GMEMSetShort(mem, 8, 0); GMEMSetShort(mem, 10, 0); GMEMSetShort(mem, 12, 0); GCSRadiobuttonSetCaption(-1, "GRadioButton00000", mem); GMEMDelete(mem); </pre>

GCSRadiobuttonGetCaption	Get caption information
Syntax	<code>GCSRadiobuttonGetCaption(nWindowNo, strName, gmCaption);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Stores acquired caption information in gmCaption.
Details	<p>Gets the caption information setting. All settings except character color are disabled.</p>
Example	<p>Gets the GRadioButton00000 caption information in the self screen as follows:</p> <pre> nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14); GCSRadiobuttonGetCaption(-1, "GRadioButton00000", mem); nCol = GMEMGetLong(mem, 0); nHPos = GMEMGetChar(mem, 4); nHPos = GMEMGetChar(mem, 5); nLMgn = GMEMGetShort(mem, 6); nRMgn = GMEMGetShort(mem, 8); nTMgn = GMEMGetShort(mem, 10); nBMgn = GMEMGetShort(mem, 12); GMEMDelete(mem); </pre>

GCSRadiobuttonSetFocusEffect	Set effect during focus
Syntax	<code>GCSRadiobuttonSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect: 0: design change 1: no effect After the effect is set, the control area is registered as a redraw
Example	Sets the GRadioButton00000 effect during focus in the self screen to 1. <code>GCSRadiobuttonSetFocusEffect(-1, "GRadioButton00000", 1);</code>

GCSRadiobuttonGetFocusEffect	Get effect during focus
Syntax	<code>GCSRadiobuttonGetFocusEffect(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: design change 1: no effect Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GRadioButton00000 effect during focus in the self screen in Stat. <code>LONG Stat; Stat = GCSRadiobuttonGetFocusEffect(-1, "GRadioButton00000");</code>

GCSRadiobuttonSetStatus	Set object status
Syntax	<code>GCSRadiobuttonSetStatus(nWindowNo, strName, ucStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucStatus : set object status
Return value	None
Details	<p>Sets the GCRadioButton object status.</p> <p>One of the following values is set for ucStatus:</p> <p>0: OFF status 1: ON status</p> <p>When ON status is set, turn the control in the same screen that sets the same group No. using the other radio button control to OFF status.</p> <p>After the object status is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GRadioButton00000 ON/OFF status in the self screen to 1.</p> <pre>GCSRadiobuttonSetStatus(-1, "GRadioButton00000", 1);</pre>

GCSRadiobuttonGetStatus	Get object status
Syntax	<code>GCSRadiobuttonGetStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Object status 0: OFF status 1: ON status
Details	Gets the GCRadioButton object status.
Example	<p>Gets the GRadioButton00000 ON/OFF status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSRadiobuttonGetStatus(-1, "GRadioButton00000");</pre>

GCSRadiobuttonSetBoxSize	Set box size
Syntax	<code>GCSRadiobuttonSetBoxSize(nWindowNo, strName, ucBoxSize);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucBoxSize : box size
Return value	None
Details	Sets the box size. After the box size is set, the control area is registered as a redraw area.
Example	Sets the GRadioButton00000 box size in the self screen to 10. <code>GCSRadiobuttonSetBoxSize(-1, "GRadioButton00000", 10);</code>

GCSRadiobuttonGetBoxSize	Get box size
Syntax	<code>GCSRadiobuttonGetBoxSize(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Box size
Details	Gets the box size settings.
Example	Gets the GRadioButton00000 box size in the self screen in Stat. LONG Stat; <code>Stat = GCSRadiobuttonGetBoxSize(-1, "GRadioButton00000");</code>

GCSRadiobuttonSetBoxColor	Set box color
Syntax	GCSRadiobuttonSetBoxColor(nWindowNo, strName, gcColor);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : box color
Return value	None
Details	Sets the box color. After the box color is set, the control area is registered as a redraw area.
Example	Sets the GRadioButton00000 box color in the self screen to white (0xffffffff). <code>GCSRadiobuttonSetColor(-1, "GRadioButton00000", HFFFFFFF);</code>

GCSRadiobuttonGetBoxColor	Get box color
Syntax	GCSRadiobuttonGetBoxColor(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Box color
Details	Gets the box color.
Example	Gets the GRadioButton00000 box color in the self screen in Stat. LONG Stat; Stat = GCSRadiobuttonGetBoxColor(-1, "GRadioButton00000");

GCSRadiobuttonSetFocusColor	Set background color during focus
Syntax	<code>GCSRadiobuttonSetFocusColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : background color during focus
Return value	None
Details	Sets the background color in the case where the effect during focus is "change design". After the background color is set, the control area is registered as a redraw area.
Example	Sets the GRadioButton00000 background color during focus in the self screen to white (0xffffffff). <code>GCSRadiobuttonSetFocusColor(-1, "GRadioButton00000", HFFFFFFF);</code>

GCSRadiobuttonGetFocusColor	Get background color during focus
Syntax	<code>GCSRadiobuttonGetFocusColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Background color during focus
Details	Gets the background color in the case where the effect during focus is "change design".
Example	Gets the GRadioButton00000 background color during focus in the self screen in Stat. <code>LONG Stat; Stat = GCSRadiobuttonGetFocusColor(-1, "GRadioButton00000");</code>

GCSRadiobuttonSetDisableCaptionColor	Set character color when disabled
 Syntax	<code>GCSRadiobuttonSetDisableCaptionColor(nWindowNo, strName, gcColor);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GColor gcColor : character color when disabled
 Return value	None
 Details	Sets the character color during disabled control. After the character color is set, the control area is registered as a redraw area.
 Example	Sets the GRadioButton00000 character color when disabled in the self screen to white (0xffffffff). <code>GCSRadiobuttonSetDisableCaptionColor(-1, "GRadioButton00000", HFFFFFF);</code>

GCSRadiobuttonGetDisableCaptionColor	Get character color when disabled
 Syntax	<code>GCSRadiobuttonGetDisableCaptionColor(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Character color when disabled
 Details	Gets the character color during disabled control.
 Example	Gets the GRadioButton00000 character color when disabled in the self screen in Stat. <code>LONG Stat; Stat = GCSRadiobuttonGetDisableCaptionColor(-1, "GRadioButton00000");</code>

GCSRadiobuttonSetDisableBoxColor	Set box color when disabled
Syntax	<code>GCSRadiobuttonSetDisableBoxColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : box color
Return value	None
Details	Sets the box color during disabled control. After the box color is set, the control area is registered as a redraw area.
Example	Sets the GRadioButton00000 box color when disabled in the self screen to white (0xffffffff). <code>GCSRadiobuttonSetDisableBoxColor(-1, "GRadioButton00000", HFFFFFFFFFF);</code>

GCSRadiobuttonGetDisableBoxColor	Get box color when disabled
Syntax	<code>GCSRadiobuttonGetDisableBoxColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Box color when disabled
Details	Gets the box color during disabled control.
Example	Gets the GRadioButton00000 box color when disabled in the self screen in Stat. <code>LONG Stat; Stat = GCSRadiobuttonGetDisableBoxColor(-1, "GRadioButton00000");</code>

GCSRadiobuttonSetRadioGroup	Set radio group No.
Syntax	<code>GCSRadiobuttonSetRadioGroup(nWindowNo, strName, usRadioGroup);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usRadioGroup : radio group No.
Return value	None
Details	Sets the group No. for radio buttons. The radio button control in the screen having the same group No. carries out an exclusion operation.
Example	Sets the GRadioButton00000 group No. in the self screen to 1. <code>GCSRadiobuttonSetRadioGroup(-1, "GRadioButton00000", 1);</code>

GCSRadiobuttonGetRadioGroup	Get radio group No.
Syntax	<code>GCSRadiobuttonGetRadioGroup(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Radio group No.
Details	Gets the group No. for radio buttons.
Example	Gets the GRadioButton00000 group No. in the self screen in Stat. <code>LONG Stat; Stat = GCSRadiobuttonGetRadioGroup(-1, "GRadioButton00000");</code>

5.12 ScrollBar

GCSScrollbarexSetDisplay	Set display type
Syntax	<code>GCSScrollbarexSetDisplay(nWindowNo, strName, ucDisplay);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucDisplay : display type
Return value	None
Details	Sets the display type. One of the following values is set for ucDisplay: 0: normal display 1: image display When a value outside of the range is set, there is no forced change of the setting. After the display type is set, the control area is registered as a redraw area.
Example	Sets the GScrollBarEx00000 display type in the self screen to 1. <code>GCSScrollbarexSetDisplay(-1, "GScrollBarEx00000", 1);</code>

GCSScrollbarexGetDisplay	Get display type
Syntax	<code>GCSScrollbarexGetDisplay(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: normal display 1: image display Besides the above: illegal display setting
Details	Gets the display type setting. When a setting outside the range is made, that setting value is returned.
Example	Gets the GScrollBarEx00000 display type in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSScrollbarexGetDisplay(-1, "GScrollBarEx00000");</code>

GCSScrollbarexSetDirection	Set scroll bar direction
Syntax	<code>GCSScrollbarexSetDirection(nWindowNo, strName, ucDirection);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucDirection : scroll bar direction
Return value	None
Details	Sets the scroll bar direction. One of the following values is set for ucDisplay: 0: vertical direction 1: horizontal direction When a value outside of the range is set, there is no forced change of the setting. After the scroll bar direction is set, the control area is registered as a redraw area.
Example	Sets the GScrollBarEx00000 direction in the self screen to 1. <code>GCSScrollbarexSetDirection(-1, "GScrollBarEx00000", 1);</code>

GCSScrollbarexGetDirection	Get scroll bar direction
Syntax	<code>GCSScrollbarexGetDirection(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: vertical direction 1: horizontal direction Besides the above: illegal display setting
Details	Gets the scroll bar direction setting. When a setting outside the range is made, that setting value is returned.
Example	Gets the GScrollBarEx00000 direction in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSScrollbarexGetDirection(-1, "GScrollBarEx00000");</code>

GCSScrollbarexSetPageSize	Set page size
Syntax	GCSScrollbarexSetPageSize(nWindowNo, strName, ulPageSize);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ulPageSize : page size
Return value	None
Details	Sets the page size. After the page size is set, the control area is registered as a redraw area.
Example	Sets the GScrollBarEx00000 page size in the self screen to 10. GCSScrollbarexSetPageSize(-1, "GScrollBarEx00000", 10) ;

GCSScrollbarexGetPageSize	Get page size
Syntax	GCSScrollbarexGetPageSize(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Page size
Details	Gets the page size.
Example	Gets the GScrollBarEx00000 page size in the self screen in Stat. LONG Stat; Stat = GCSScrollbarexGetPageSize(-1, "GScrollBarEx00000") ;

GCSScrollbarexSetScrollArrowColor	Set scroll arrow color
 Syntax	<code>GCSScrollbarexSetScrollArrowColor(nWindowNo, strName, gcColor);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for scroll arrow color
 Return value	None
 Details	<p>Sets the scroll bar arrow color. After the scroll bar arrow color is set, the control area is registered as a redraw area.</p>
 Example	<p>Sets the GScrollBarEx00000 scroll arrow color in the self screen to white (0xffffffff).</p> <pre>GCSScrollbarexSetScrollArrowColor(-1, "GScrollBarEx00000", HFFFFFFFFFF);</pre>

GCSScrollbarexGetScrollArrowColor	Get scroll arrow color
 Syntax	<code>GCSScrollbarexGetScrollArrowColor(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Color code
 Details	Gets the scroll bar arrow color.
 Example	<p>Gets the GScrollBarEx00000 scroll arrow color in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSScrollbarexGetScrollArrowColor(-1, "GScrollBarEx00000");</pre>

GCSScrollbarexSetScrollPosition	Set scroll bar current position
Syntax	GCSScrollbarexSetScrollPosition(nWindowNo, strName, nPosition);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nPosition : scroll bar current position
Return value	None
Details	Sets the scroll bar current position. When a value that exceeds the range of the property "Scroll maximum" and "Scroll minimum" is set, the set value is set in the property "Scroll maximum" and "Scroll minimum".
Example	Sets the GScrollBarEx00000 scroll bar current position in the self screen to 50. GCSScrollbarexSetScrollPosition(-1, "GScrollBarEx00000", 50);

GCSScrollbarexGetScrollPosition	Get scroll bar current position
Syntax	GCSScrollbarexGetScrollPosition(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Current position
Details	Gets the scroll bar current position.
Example	Gets the GScrollBarEx00000 scroll bar current position in the self screen in nPosition. LONG nPosition; nPosition = GCSScrollbarexGetScrollPosition(-1, "GScrollBarEx00000");

GCSScrollbarexSetPrevBtnOnImgID	Set design (upper) resource ID when button is ON
---------------------------------	--

 Syntax	GCSScrollbarexSetPrevBtnOnImgID(nWindowNo, strName, usID);
--	--

 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : design (upper) resource ID when button is ON
--	--

 Return value	None
--	------

 Details	Sets the design (upper) resource ID when the button is ON. After the design resource ID is set, the control area is registered as a redraw area.
---	---

 Example	Sets the GScrollBarEx00000 design (upper) resource ID in the self screen when the button is ON to 1. <code>GCSScrollbarexSetPrevBtnOnImgID(-1, "GScrollBarEx00000", 1);</code>
---	---

GCSScrollbarexSetPrevBtnOffImgID	Set design (upper) resource ID when button is OFF
----------------------------------	---

 Syntax	GCSScrollbarexSetPrevBtnOffImgID(nWindowNo, strName, usID);
--	---

 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : design (upper) resource ID when button is OFF
--	---

 Return value	None
--	------

 Details	Sets the design (upper) resource ID when the button is OFF. After the design resource ID is set, the control area is registered as a redraw area.
---	--

 Example	Sets the GScrollBarEx00000 design (upper) resource ID in the self screen when the button is OFF to 1. <code>GCSScrollbarexSetPrevBtnOffImgID(-1, "GScrollBarEx00000", 1);</code>
---	---

GCSScrollbarexGetPrevBtnOnImgID	Get design (upper) resource ID when button is ON
---------------------------------	--

Syntax	GCSScrollbarexGetPrevBtnOnImgID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Design (upper) resource ID when button is ON
Details	Gets the design (upper) resource ID setting when the button is ON.
Example	Gets the GScrollBarEx00000 design (upper) resource ID in the self screen when the button is ON in Stat. LONG Stat; Stat = GCSScrollbarexGetPrevBtnOnImgID(-1, "GScrollBarEx00000") ;

GCSScrollbarexGetPrevBtnOffImgID	Get design (upper) resource ID when button is OFF
----------------------------------	---

Syntax	GCSScrollbarexGetPrevBtnOffImgID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Design (upper) resource ID when button is OFF
Details	Gets the design (upper) resource ID setting when the button is OFF.
Example	Gets the GScrollBarEx00000 design (upper) resource ID in the self screen when the button is OFF in Stat. LONG Stat; Stat = GCSScrollbarexGetPrevBtnOffImgID(-1, "GScrollBarEx00000") ;

GCSScrollbarexSetNextBtnOnImgID	Set design (lower) resource ID when button is ON
---------------------------------	--

 Syntax	GCSScrollbarexSetNextBtnOnImgID(nWindowNo, strName, usID);
--	--

 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : design (lower) resource ID when button is ON
--	--

 Return value	None
--	------

 Details	Sets the design (lower) resource ID when the button is ON. After the design resource ID is set, the control area is registered as a redraw area.
---	---

 Example	Sets the GScrollBarEx00000 design (lower) resource ID in the self screen when the button is ON to 1. <code>GCSScrollbarexSetNextBtnOnImgID(-1, "GScrollBarEx00000", 1);</code>
---	---

GCSScrollbarexSetNextBtnOffImgID	Set design (lower) resource ID when button is OFF
----------------------------------	---

 Syntax	GCSScrollbarexSetNextBtnOffImgID(nWindowNo, strName, usID);
--	---

 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : design (lower) resource ID when button is OFF
--	---

 Return value	None
--	------

 Details	Sets the design (lower) resource ID when the button is OFF. After the design resource ID is set, the control area is registered as a redraw area.
---	--

 Example	Sets the GScrollBarEx00000 design (lower) resource ID in the self screen when the button is OFF to 1. <code>GCSScrollbarexSetNextBtnOffImgID(-1, "GScrollBarEx00000", 1);</code>
---	---

GCSScrollbarexGetNextBtnOnImgID	Get design (lower) resource ID when button is ON
Syntax	<code>GCSScrollbarexGetNextBtnOnImgID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Design (lower) resource ID when button is ON
Details	Gets the design (lower) resource ID setting when the button is ON.
Example	Gets the GScrollBarEx00000 design (lower) resource ID in the self screen when the button is ON in Stat. LONG Stat; Stat = GCSScrollbarexGetNextBtnOnImgID(-1, "GScrollBarEx00000") ;
GCSScrollbarexGetNextBtnOffImgID	Get design (lower) resource ID when button is OFF
Syntax	<code>GCSScrollbarexGetNextBtnOffImgID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Design (lower) resource ID when button is OFF
Details	Gets the design (lower) resource ID setting when the button is OFF.
Example	Gets the GScrollBarEx00000 design (lower) resource ID in the self screen when the button is OFF in Stat. LONG Stat; Stat = GCSScrollbarexGetNextBtnOffImgID(-1, "GScrollBarEx00000") ;

GCSScrollbarexSetBackGroundColor	Set background color
Syntax	<code>GCSScrollbarexSetBackGroundColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for background color
Return value	None
Details	Sets the background color. After the background color is set, the control area is registered as a redraw area.
Example	Sets the GScrollBarEx00000 background color in the self screen to white (0xffffffff). <code>GCSScrollbarexSetBackGroundColor(-1, "GScrollBarEx00000", HFFFFFFF);</code>

GCSScrollbarexGetBackGroundColor	Get background color
Syntax	<code>GCSScrollbarexGetBackGroundColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code
Details	Gets the background color.
Example	Gets the GScrollBarEx00000 background color in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSScrollbarexGetBackGroundColor(-1, "GScrollBarEx00000");</code>

GCSScrollbarexSetOutLineBorderID	Set outline 3D border
Syntax	GCSScrollbarexSetOutLineBorderID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
Return value	None
Details	Sets the outline 3D border.
Example	Sets the GScrollBarEx00000 3D border resource ID in the self screen to 1. GCSScrollbarexSetOutLineBorderID(-1, "GscrollBarEx00000", 1);

GCSScrollbarexGetOutLineBorderID	Get outline 3D border
Syntax	GCSScrollbarexGetOutLineBorderID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Outline 3D border resource ID
Details	Gets outline 3D border resource ID.
Example	Gets the GScrollBarEx00000 3D border resource ID in the self screen in Stat. LONG Stat; Stat = GCSScrollbarexGetOutLineBorderID(-1, "GscrollBarEx00000");

GCSScrollbarexSetPinchWidth	Set pinch width
Syntax	<code>GCSScrollbarexSetPinchWidth(nWindowNo, strName, nWidth);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nWidth : pinch width
Return value	None
Details	Sets the pinch width.
Example	Sets the GScrollBarEx00000 pinch width in the self screen to 5. <code>GCSScrollbarexSetPinchWidth(-1, "GScrollBarEx00000", 5);</code>

GCSScrollbarexGetPinchWidth	Get pinch width
Syntax	<code>GCSScrollbarexGetPinchWidth(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Pinch width
Details	Gets the pinch width.
Example	Gets the GScrollBarEx00000 pinch width in the self screen in Stat. LONG Stat; Stat = GCSScrollbarexGetPinchWidth(-1, "GScrollBarEx00000");

GCSScrollbarexSetPinchColor	Set pinch color
Syntax	<code>GCSScrollbarexSetPinchColor(nWindowNo, strName, gcColor);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : pinch color
Return value	None
Details	Sets the pinch color.
Example	Sets the GScrollBarEx00000 pinch color in the self screen to white (0xffffffff). <code>GCSScrollbarexSetPinchColor(-1, "GScrollBarEx00000", HFFFFFFF);</code>

GCSScrollbarexGetPinchColor	Get pinch color
Syntax	<code>GCSScrollbarexGetPinchColor(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Pinch color
Details	Gets the pinch color.
Example	Gets the GScrollBarEx00000 pinch color in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSScrollbarexGetPinchColor(-1, "GScrollBarEx00000");</code>

GCSScrollbarexSetBarEnableStatus	Set bar display/non-display
 Syntax	<code>GCSScrollbarexSetBarEnableStatus(nWindowNo, strName, nStatus);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) short nStatus : display setting
 Return value	None
 Details	<p>Sets the display/non-display for the bar. One of the following values is set for nStatus: 0: display 1: non-display</p>
 Example	<p>Sets the GScrollBarEx00000 bar display/non-display status in the self screen to 1.</p> <pre>GCSScrollbarexSetBarEnableStatus(-1, "GScrollBarEx00000", 1);</pre>

GCSScrollbarexGetBarEnableStatus	Get bar display/non-display
 Syntax	<code>GCSScrollbarexGetBarEnableStatus(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	<ul style="list-style-type: none"> 0: non-display 1: display
 Details	Gets the display/non-display setting for the bar.
 Example	<p>Gets the GScrollBarEx00000 bar display/non-display status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSScrollbarexGetBarEnableStatus(-1, "GScrollBarEx00000");</pre>

5.13 TextBox

GCSTextboxSetBorderID	Set 3D border resource ID
Syntax	GCSTextboxSetBorderID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : Screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
Return value	None
Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 3D border resource ID in the self screen to 1. <code>GCSTextboxSetBorderID(-1, "GTextBox00000", 1);</code>

GCSTextboxGetBorderID	Get 3D border resource ID
Syntax	GCSTextboxGetBorderID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	3D border resource ID
Details	Gets the 3D border resource ID.
Example	Gets the GTextBox00000 3D border resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSTextboxGetBorderID(-1, "GTextBox00000");</code>

GCSTextboxSetFontID	Set font resource ID
Syntax	<code>GCSTextboxSetFontID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 font resource ID in the self screen to 1. <code>GCSTextboxSetFontID(-1, "GTextBox00000", 1);</code>

GCSTextboxGetFontID	Get font resource ID
Syntax	<code>GCSTextboxGetFontID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GTextBox00000 font resource ID in the self screen in Stat. <code>Stat = GCSTextboxGetFontID(-1, "GTextBox00000");</code>

GCSTextboxSetCaption	Set caption information
Syntax	GCSTextboxSetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	Set the caption information. After the caption information is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 caption information in the self screen as follows: Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 <pre> mem = GMEMCreate("TESTMEM", 14) ; GMEMSetLong(mem, 0, HFFFFF) ; GMEMSetChar(mem, 4, 0) ; GMEMSetChar(mem, 5, 1) ; GMEMSetShort(mem, 6, 10) ; GMEMSetShort(mem, 8, 0) ; GMEMSetShort(mem, 10, 0) ; GMEMSetShort(mem, 12, 0) ; GCSTextboxSetCaption(-1, "GTextBox00000", mem) ; GMEMDelete(mem); </pre>

GCSTextboxGetCaption	Get caption information
Syntax	GCSTextboxGetCaption(nWindowNo, strName, gmCaption);
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Stores acquired caption information in gmCaption.
Details	Gets the caption information.
Example	<p>Gets the GTextBox00000 caption information in the self screen as follows:</p> <pre> nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14) ; GCSTextboxGetCaption(-1, "GTextBox00000", mem) ; nCol = GMEMGetLong(mem, 0) ; nHPos = GMEMGetChar(mem, 4) ; nHPos = GMEMGetChar(mem, 5) ; nLMgn = GMEMGetShort(mem, 6) ; nRMgn = GMEMGetShort(mem, 8) ; nTMgn = GMEMGetShort(mem, 10) ; nBMgn = GMEMGetShort(mem, 12) ; GMEMDelete(mem); </pre>

GCSTextboxSetFocusEffect	Set effect during focus
Syntax	<code>GCSTextboxSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect: 0: design change 1: no effect After the effect is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 effect during focus in the self screen to 1. <code>GCSTextboxSetFocusEffect(-1, "GTextBox00000", 1);</code>

GCSTextboxGetFocusEffect	Get effect during focus
Syntax	<code>GCSTextboxGetFocusEffect(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: design change 1: no effect Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GTextBox00000 effect during focus in the self screen in Stat. <code>LONG Stat; Stat = GCSTextboxGetFocusEffect(-1, "GTextBox00000");</code>

GCSTextboxSetFocusColor	Set background color during focus
 Syntax	<code>GCSTextboxSetFocusColor(nWindowNo, strName, gcColor);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for background color during
 Return value	None
 Details	Sets the background color during focus. After the background color is set, the control area is registered as a redraw area.
 Example	Sets the GTextBox00000 background color during focus in the self screen to white (0xffffffff). <code>GCSTextboxSetFocusColor(-1, "GTextBox00000", HFFFFFF);</code>
GCSTextboxGetFocusColor	Get background color during focus
 Syntax	<code>GCSTextboxGetFocusColor(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Color code for background color during focus
 Details	Gets the background color during focus.
 Example	Gets the GTextBox00000 background color during focus in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSTextboxGetFocusColor(-1, "GTextBox00000");</code>

GCSTextboxSetNormalColor	Set normal background color
Syntax	<code>GCSTextboxSetNormalColor(nWindowNo, strName, gcColor);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : color code for normal background color
Return value	None
Details	<p>Sets the normal background color. After the background color is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GTextBox00000 normal background color in self screen to white (0xffffffff).</p> <pre>GCSTextboxSetNormalColor(-1, "GTextBox00000", HFFFFFFF) ;</pre>

GCSTextboxGetNormalColor	Get normal background color
Syntax	<code>GCSTextboxGetNormalColor(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for normal background color
Details	Gets the normal background color.
Example	<p>Gets the GTextBox00000 normal background color in self screen in Stat.</p> <pre>LONG Stat; Stat = GCSTextboxGetNormalColor(-1, "GTextBox00000") ;</pre>

GCSTextboxSetDisableColor	Set background color when disabled
Syntax	GCSTextboxSetDisableColor(nWindowNo, strName, gcColor);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG gcColor : color code for background color when
Return value	None
Details	Sets the background color when disabled. After the background color is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 background color when disabled in the self screen to white (0xffffffff). <code>GCSTextboxSetDisableColor(-1, "GTextBox00000", HFFFFF);</code>

GCSTextboxGetDisableColor	Get background color when disabled
Syntax	GCSTextboxGetDisableColor(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for background color setting when disabled
Details	Gets the background color when disabled.
Example	Gets the GTextBox00000 background color when disabled in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSTextboxGetDisableColor(-1, "GTextBox00000");</code>

GCSTextboxSetTextType	Set character string type														
Syntax	<code>GCSTextboxSetTextType(nWindowNo, strName, ucType);</code>														
Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(i) LONG ucType : character string type (Setting value of the "Type" property)</p>														
Return value	None														
Details	<p>Sets the character string type.</p> <p>One of the following values is set for ucType:</p> <table> <tr><td>GTEXT_TYPE_STRING(0)</td><td>: character string</td></tr> <tr><td>GTEXT_TYPE_SHORT(1)</td><td>: short value</td></tr> <tr><td>GTEXT_TYPE USHORT(2)</td><td>: unsigned short value</td></tr> <tr><td>GTEXT_TYPE_LONG(3)</td><td>: long value</td></tr> <tr><td>GTEXT_TYPE ULONG(4)</td><td>: unsigned long value</td></tr> <tr><td>GTEXT_TYPE_FLOAT(5)</td><td>: float value</td></tr> <tr><td>GTEXT_TYPE_DOUBLE(6)</td><td>: double value</td></tr> </table> <p>After the character string type is set, the control area is registered as a redraw area.</p>	GTEXT_TYPE_STRING(0)	: character string	GTEXT_TYPE_SHORT(1)	: short value	GTEXT_TYPE USHORT(2)	: unsigned short value	GTEXT_TYPE_LONG(3)	: long value	GTEXT_TYPE ULONG(4)	: unsigned long value	GTEXT_TYPE_FLOAT(5)	: float value	GTEXT_TYPE_DOUBLE(6)	: double value
GTEXT_TYPE_STRING(0)	: character string														
GTEXT_TYPE_SHORT(1)	: short value														
GTEXT_TYPE USHORT(2)	: unsigned short value														
GTEXT_TYPE_LONG(3)	: long value														
GTEXT_TYPE ULONG(4)	: unsigned long value														
GTEXT_TYPE_FLOAT(5)	: float value														
GTEXT_TYPE_DOUBLE(6)	: double value														
Example	<p>Sets the GTextBox00000 display character string type in the self screen to 1.</p> <pre>GCSTextboxSetTextType(-1, "GTextBox00000", 1);</pre>														

(Note) When the character string type is changed, also change the "Display Format" property to suit the character string type.

If the character string type does not match the "Display Format" property, the character string type is not applied.

GCSTextboxGetTextType	Get character string type														
Syntax	<code>GCSTextboxGetTextType(nWindowNo, strName);</code>														
Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p>														
Return value	<table> <tr><td>GTEXT_TYPE_STRING(0)</td><td>: character string</td></tr> <tr><td>GTEXT_TYPE_SHORT(1)</td><td>: short value</td></tr> <tr><td>GTEXT_TYPE USHORT(2)</td><td>: unsigned short value</td></tr> <tr><td>GTEXT_TYPE_LONG(3)</td><td>: long value</td></tr> <tr><td>GTEXT_TYPE ULONG(4)</td><td>: unsigned long value</td></tr> <tr><td>GTEXT_TYPE_FLOAT(5)</td><td>: float value</td></tr> <tr><td>GTEXT_TYPE_DOUBLE(6)</td><td>: double value</td></tr> </table>	GTEXT_TYPE_STRING(0)	: character string	GTEXT_TYPE_SHORT(1)	: short value	GTEXT_TYPE USHORT(2)	: unsigned short value	GTEXT_TYPE_LONG(3)	: long value	GTEXT_TYPE ULONG(4)	: unsigned long value	GTEXT_TYPE_FLOAT(5)	: float value	GTEXT_TYPE_DOUBLE(6)	: double value
GTEXT_TYPE_STRING(0)	: character string														
GTEXT_TYPE_SHORT(1)	: short value														
GTEXT_TYPE USHORT(2)	: unsigned short value														
GTEXT_TYPE_LONG(3)	: long value														
GTEXT_TYPE ULONG(4)	: unsigned long value														
GTEXT_TYPE_FLOAT(5)	: float value														
GTEXT_TYPE_DOUBLE(6)	: double value														
Details	Gets the display character string type (the "Type" property).														
Example	<p>Gets the GTextBox00000 display character string type in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSTextboxGetTextType(-1, "GTextBox00000");</pre>														

GCSTextboxSetFormatID	Set character string display format resource ID
Syntax	<code>GCSTextboxSetFormatID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : display format character string resource
Return value	None
Details	Sets the character string resource ID used as the format when display in a text box. After the character string resource ID is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 character string resource ID in the self screen to 1. <code>GCSTextboxSetFormatID(-1, "GTextBox00000", 1);</code>

(Note) If the display format is changed, also change the character string type to the appropriate value.
If the character string type does not match the "Display Format" property, the display format is not applied.

GCSTextboxGetFormatID	Get character string display format resource ID
Syntax	<code>GCSTextboxGetFormatID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Character string resource ID
Details	Gets the character string resource ID used as the display format.
Example	Gets the GTextBox00000 character string resource ID (The "Display Format" property) in the self screen in Stat. LONG Stat; <code>Stat = GCSTextboxGetFormatID(-1, "GTextBox00000");</code>

GCSTextboxSetPasswordStatus	Set password display status
 Syntax	<code>GCSTextboxSetPasswordStatus(nWindowNo, strName, fStatus);</code>
 Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(i) LONG fStatus : password display status</p>
 Return value	None
 Details	<p>Sets whether the password will be displayed for text boxes or not.</p> <p>One of the following values is set for fStatus:</p> <p>0: normal display status 1: password display status</p> <p>After the password display status is set, the control area is registered as a redraw area.</p>
 Example	<p>Sets the GTextBox00000 password display status in the self screen to 1.</p> <pre>GCSTextboxSetPasswordStatus(-1, "GTextBox00000", 1);</pre>

GCSTextboxGetPasswordStatus	Get password display status
 Syntax	<code>GCSTextboxGetPasswordStatus(nWindowNo, strName);</code>
 Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p>
 Return value	<p>0: normal display status 1: password display status</p>
 Details	Gets whether the test box display status is normal display status or the password display status.
 Example	<p>Gets the GTextBox00000 password display status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSTextboxGetPasswordStatus(-1, "GTextBox00000");</pre>

GCSTextboxSetCommaStatus	Set comma display status
Syntax	<code>GCSTextboxSetCommaStatus(nWindowNo, strName, fStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : comma display status
Return value	None
Details	Sets whether commas will be displayed for text boxes or not. One of the following values is set for fStatus: 0: normal display status 1: comma display status After the comma display status is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 comma display status in the self screen to 1. <code>GCSTextboxSetCommaStatus(-1, "GTextBox00000", 1);</code>

GCSTextboxGetCommaStatus	Get comma display status
Syntax	<code>GCSTextboxGetCommaStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: normal display status 1: comma display status
Details	Gets the setting as to whether the test box display status is normal display status or the comma display status.
Example	Gets the GTextBox00000 comma display status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSTextboxGetCommaStatus(-1, "GTextBox00000");</code>

GCSTextboxSetRefuseInputNumberStatus	Set numerical input disabled status
Syntax	<code>GCSTextboxSetRefuseInputNumberStatus(nWindowNo, strName, fStatus);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : number input status
Return value	None
Details	<p>Sets whether numerical input will be rejected for text boxes or not.</p> <p>One of the following values is set for fStatus:</p> <ul style="list-style-type: none"> 0: input enabled 1: input disabled
Example	<p>Sets the GTextBox00000 numerical input disabled status in the self screen to 1.</p> <pre>GCSTextboxSetRefuseInputNumberStatus(-1, "GTextBox00000", 1);</pre>

GCSTextboxGetRefuseInputNumberStatus	Get numerical input disabled status
Syntax	<code>GCSTextboxGetRefuseInputNumberStatus(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	<ul style="list-style-type: none"> 0: input enabled 1: input disabled
Details	Gets the setting as to whether numerical input will be rejected for text boxes or not.
Example	<p>Gets the GTextBox00000 numerical input disabled status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSTextboxGetRefuseInputNumberStatus(-1, "GTextBox00000");</pre>

GCSTextboxSetRefuseInputSmallLetterStatus	Set one-byte lower case character input disabled status
 Syntax	<code>GCSTextboxSetRefuseInputSmallLetterStatus(nWindowNo, strName, fStatus);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : one-byte lower case character input
 Return value	None
 Details	Sets whether one-byte lower case character input will be rejected for text boxes or not. One of the following values is set for fStatus: 0: input enabled 1: input disabled
 Example	Sets the GTextBox00000 one-byte small letter input disabled status in the self screen to 1. <code>GCSTextboxSetRefuseInputSmallLetterStatus(-1, "GTextBox00000", 1);</code>
GCSTextboxGetRefuseInputSmallLetterStatus	Get one-byte lower case character input disabled status
 Syntax	<code>GCSTextboxGetRefuseInputSmallLetterStatus(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	0: input enabled 1: input disabled
 Details	Gets the setting as to whether one-byte lower case character input will be rejected for text boxes or not.
 Example	Gets the GTextBox00000 one-byte small letter input disabled status in the self screen in Stat. <code>LONG Stat; Stat = GCSTextboxGetRefuseInputSmallLetterStatus(-1, "GTextBox00000");</code>

GCSTextboxSetRefuseInputCapitalLetterStatus	Set one-byte upper case character input disabled status
Syntax	<code>GCSTextboxSetRefuseInputCapitalLetterStatus(nWindowNo, strName, fStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : one-byte upper case character input
Return value	None
Details	Sets whether one-byte upper case character input will be rejected for text boxes or not. One of the following values is set for fStatus: 0: input enabled 1: input disabled
Example	Sets the GTextBox00000 one-byte capital letter input disabled status in the self screen to 1. <code>GCSTextboxSetRefuseInputCapitalLetterStatus(-1, "GTextBox00000", 1);</code>

GCSTextboxGetRefuseInputCapitalLetterStatus	Get one-byte upper case character input disabled status
Syntax	<code>GCSTextboxGetRefuseInputCapitalLetterStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: input enabled 1: input disabled
Details	Gets whether one-byte upper case character input will be rejected for text boxes or not.
Example	Gets the GTextBox00000 one-byte capital letter input disabled status in the self screen in Stat. <code>LONG Stat; Stat = GCSTextboxGetRefuseInputCapitalLetterStatus(-1, "GTextBox00000");</code>

GCSTextboxSetRefuseInputSymbolLetterStatus	Set one-byte symbol input disabled status
Syntax	<code>GCSTextboxSetRefuseInputSymbolLetterStatus(nWindowNo, strName, fStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : one-byte symbol input status
Return value	None
Details	Sets whether one-byte symbol input will be rejected for text boxes or not. One of the following values is set for fStatus: 0: input enabled 1: input disabled
Example	Sets the GTextBox00000 one-byte symbol letter input disabled status in the self screen to 1. <code>GCSTextboxSetRefuseInputSymbolLetterStatus(-1, "GTextBox00000", 1);</code>

GCSTextboxGetRefuseInputSymbolLetterStatus	Get one-byte symbol input disabled status
Syntax	<code>GCSTextboxGetRefuseInputSymbolLetterStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: input enabled 1: input disabled
Details	Gets whether one-byte symbol input will be rejected for text boxes or not.
Example	Gets the GTextBox00000 one-byte symbol letter input disabled status in the self screen in Stat. <code>LONG Stat; Stat = GCSTextboxGetRefuseInputSymbolLetterStatus(-1, "GTextBox00000");</code>

GCSTextboxSetRefuseInputFullLetterStatus	Set two-byte character input disabled status
 Syntax	<code>GCSTextboxSetRefuseInputFullLetterStatus(nWindowNo, strName, fStatus);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : two-byte character input status
 Return value	None
 Details	Sets whether two-byte character input will be rejected for text boxes or not. One of the following values is set for fStatus: 0: input enabled 1: input disabled
 Example	Sets the GTextBox00000 two-byte letter input disabled status in the self screen to 1. <code>GCSTextboxSetRefuseInputFullLetterStatus(-1, "GTextBox00000", 1);</code>

GCSTextboxGetRefuseInputFullLetterStatus	Get two-byte character input disabled status
 Syntax	<code>GCSTextboxGetRefuseInputFullLetterStatus(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	0: input enabled 1: input disabled
 Details	Gets setting as to whether two-byte character input will be rejected for text boxes or not.
 Example	Gets the GTextBox00000 two-byte letter input disabled status in the self screen in Stat. <code>LONG Stat; Stat = GCSTextboxGetRefuseInputFullLetterStatus(-1, "GTextBox00000");</code>

GCSTextboxSetCheckMaxStatus	Set maximum value check status
Syntax	<code>GCSTextboxSetCheckMaxStatus(nWindowNo, strName, fStatus);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : setting for maximum value check status
Return value	None
Details	<p>Sets the status of the maximum value check during input/output for the text box.</p> <p>One of the following values is set for fStatus:</p> <ul style="list-style-type: none"> 0: maximum value check disabled 1: maximum value check enabled
Example	<p>Sets the GTextBox00000 maximum value check status in the self screen to 1.</p> <pre>GCSTextboxSetCheckMaxStatus(-1, "GTextBox00000", 1);</pre>

GCSTextboxGetCheckMaxStatus	Get maximum value check status
Syntax	<code>GCSTextboxGetCheckMaxStatus(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	<ul style="list-style-type: none"> 0: check disabled 1: check enabled
Details	Gets the status of the maximum value check during input/output from the text box.
Example	<p>Gets the GTextBox00000 maximum value check status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSTextboxGetCheckMaxStatus(-1, "GTextBox00000");</pre>

GCSTextboxSetCheckMinStatus	Set minimum value check status
Syntax	<code>GCSTextboxSetCheckMinStatus(nWindowNo, strName, fStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : setting for minimum value check status
Return value	None
Details	Sets the status of the minimum value check during input/output for the text box. One of the following values is set for fStatus: 0: minimum value check disabled 1: minimum value check enabled
Example	Sets the GTextBox00000 minimum value check status in the self screen to 1. <code>GCSTextboxSetCheckMinStatus(-1, "GTextBox00000", 1);</code>

GCSTextboxGetCheckMinStatus	Get minimum value check status
Syntax	<code>GCSTextboxGetCheckMinStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: check disabled 1: check enabled
Details	Gets the status of the minimum value check during input/output from the text box.
Example	Gets the GTextBox00000 minimum value check status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSTextboxGetCheckMinStatus(-1, "GTextBox00000");</code>

GCSTextboxSetMaxGValue	Set maximum value
 Syntax	<code>GCSTextboxSetMaxGValue(nWindowNo, strName, gvValue);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gvValue : maximum value
 Return value	None
 Details	Sets the value of the maximum value check during input/output for the text box.
 Example	Sets the value of GTextBox00000 maximum value check in the self screen to 100. <code>GCSTextboxSetMaxGValue(-1, "GTextBox00000", 100);</code>
GCSTextboxGetMaxGValue	Get maximum value
 Syntax	<code>GCSTextboxGetMaxGValue(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Maximum value (GValue)
 Details	Gets the value of the maximum value check during input/output from the text box.
 Example	Gets the value of GTextBox00000 maximum value check in the self screen in Stat. LONG Stat; <code>Stat = GCSTextboxGetMaxGValue(-1, "GTextBox00000");</code>

GCSTextboxSetMinGValue	Set minimum value
Syntax	<code>GCSTextboxSetMinGValue(nWindowNo, strName, gvValue);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gvValue : minimum value
Return value	None
Details	Sets the value of the minimum value check during input/output for the text box.
Example	Sets the value of GTextBox00000 minimum value check in the self screen to 1. <code>GCSTextboxSetMinGValue(-1, "GTextBox00000", 1);</code>

GCSTextboxGetMinGValue	Get minimum value
Syntax	<code>GCSTextboxGetMinGValue(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Minimum value (GValue)
Details	Gets the value of the minimum value check during input/output from the text box.
Example	Gets the value of GTextBox00000 minimum value check in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSTextboxGetMinGValue(-1, "GTextBox00000");</code>

GCSTextboxSetString	Set display character string
Syntax	GCSTextboxSetString(nWindowNo, strName, pString);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pString : display character string
Return value	0: setting failed 1: setting succeeded
Details	Sets the display character string.
Example	Sets the character string "ABCD" in GtextBox00000 in the self screen. GCSTextboxSetString(-1, "GTextBox00000", "ABCD");

GCSTextboxGetString	Get display character string
Syntax	GCSTextboxGetString(nWindowNo, strName, pString);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) STRING pString : display character string
Return value	0: acquisition failed 1: acquisition succeeded
Details	Stores the display character string in pString.
Example	Gets the GTextBox00000 display character string in the self screen in Stat. STRING strStat; GCSTextboxGetString(-1, "GTextBox00000", strStat);

GCSTextboxSetGValue	Set display value
Syntax	GCSTextboxSetGValue(nWindowNo, strName, gvValue);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gvValue : global memory for setting value
Return value	0: normal value 1: illegal value 2: less than minimum value 3: greater than maximum value 4: over maximum number of characters 5: illegal type
Details	<p>Sets the value displayed in a text box.</p> <p>Numbers are converted to character strings according to the display format.</p> <p>At this time, the maximum value and minimum value are checked, and if it is outside of the range, an error is returned in the return value.</p> <p>After the display value is set, the control area is registered as a redraw area.</p> <p>(Note 1) If the number of characters after the conversion is over the value of the "maximum number of characters" of the properties, the "over maximum number of characters" will be returned. Even when the "over maximum number of characters" occurs, a character string which is limited to "maximum number of characters" is displayed.</p> <p>(Note 2) Use the function "GCSCTextboxSetString", if float or double is set to the "type" of the properties.</p> <p>(Note 3) If "Display Format" does not match the "Type" property, the value cannot be set.</p>
Example	<p>Sets the LONG integer value 100 as a value to be displayed in the GTextBox00000 in the self screen.</p> <pre> GMEM mem; GCSTextboxSetTextType(-1, "GTextBox00000", 3); mem = GMEMCreate("TESTMEM", 4); GMEMSetLong(mem, 0, 100); GCSTextboxSetGValue(-1, "GTextBox00000", mem); GMEMDelete(mem); </pre>

GCSTextboxGetGValue	Get display value
Syntax	GCSTextboxGetGValue(nWindowNo, strName, gvValue);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gvValue : global memory to store numerical value
Return value	0: normal value 1: illegal value 2: less than minimum value 3: greater than maximum value 5: illegal type
Details	<p>Gets the value displayed in a text box.</p> <p>Character strings are converted to numbers according to the display format.</p> <p>At this time, the maximum value and minimum value are checked, and if it is outside of the range, an error is returned in the return value.</p> <p>(Note 1) Use the function "GCSCTextboxSetString", if float or double is set to the "type" of the properties.</p> <p>(Note 2) If "Display Format" does not match the "Type" property, the value cannot be set.</p>
Example	<p>Gets the numerical value being displayed in GtextBox00000 in the self screen as nVal : LONG integer value.</p> <pre> GMEM mem; LONG nVal; mem = GMEMCreate("TESTMEM", 4) ; GCSTextboxGetGValue(-1, "GtextBox00000", mem) ; nVal = GMEMGetLong(mem, 4) GMEMDelete(mem); </pre>

GCSTextboxSetBackGroundPattern	Set background fill status
Syntax	<code>GCSTextboxSetBackGroundPattern(nWindowNo, strName, nBackGroundPattern);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nBackGroundPattern : background fill status
Return value	None
Details	Sets the background color fill status. One of the following values is set for nBackGroundPattern: -1: no fill -2: with background fill
Example	Sets the GTextBox00000 background fill status in the self screen to -2. <code>GCSTextboxSetBackGroundPattern(-1, "GTextBox00000", -2) ;</code>

GCSTextboxGetBackGroundPattern	Get background fill status
Syntax	<code>GCSTextboxGetBackGroundPattern(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Background fill status -1: no fill -2: with background fill
Details	Gets the background color fill status.
Example	Gets the GTextBox00000 background fill status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSTextboxGetBackGroundPattern(-1, "GTextBox00000") ;</code>

5.14 NCPLCButton

GCSNCPLCButtonSetAction	Set PLC button operations
Syntax	<code>GCSNCPLCButtonSetAction(nWindowNo, strName, ucAction);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucAction : button operation
Return value	None
Details	Sets the PLC button operation. One of the following values is set for ucAction: 0: no operation 1: momentary operation 2: alternative operation When a value outside of the range is set, there is no forced change of the setting.
Example	Sets the GNCPLCButton00000 operations in the self screen to the momentary mode. <code>GCSNCPLCButtonSetAction(-1, "GNCPLCButton00000", 1);</code>

GCSNCPLCButtonGetAction	Get PLC button operations
Syntax	<code>GCSNCPLCButtonGetAction(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: no operation 1: momentary operation 2: alternative operation Besides the above: illegal operation setting
Details	Gets the PLC button operation setting. When a setting outside the range is made, that setting value is returned.
Example	Gets the GNCPLCButton00000 operations in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCButtonGetAction (-1, "GNCPLCButton00000");</code>

GCSNCPLCButtonSetDisplay	Set PLC button display
 Syntax	<code>GCSNCPLCButtonSetDisplay(nWindowNo, strName, ucDisplay);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucDisplay : button display
 Return value	None
 Details	Sets the PLC button display. One of the following values is set for ucDisplay: 0: rectangle display 1: image display 3: round shape display When a value outside of the range is set, there is no forced change of the setting. After the PLC button display is set, the control area is registered as a redraw area.
 Example	Sets the GNCPLCButton00000 in the self screen to be displayed in a rectangle. <code>GCSNCPLCButtonSetDisplay(-1, "GNCPLCButton00000", 0);</code>
GCSNCPLCButtonGetDisplay	Get PLC button display
 Syntax	<code>GCSNCPLCButtonGetDisplay(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	0: rectangle display 1: image display 3: round shape display Besides the above: illegal display setting
 Details	Gets the PLC button display setting. When a setting outside the range is made, that setting value is returned.
 Example	Gets the GNCPLCButton00000 display setting in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCButtonGetDisplay(-1, "GNCPLCButton00000");</code>

GCSNCPLCButtonSetBorderID	Set 3D border resource ID
 Syntax	<code>GCSNCPLCButtonSetBorderID(nWindowNo, strName, usID);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : 3D border resource ID
 Return value	None
 Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
 Example	Sets the GNCPLCButton00000 3D border resource ID in the self screen to 1. <code>GCSNCPLCButtonSetBorderID(-1, "GNCPLCButton00000", 1);</code>

GCSNCPLCButtonGetBorderID	Get 3D border resource ID
 Syntax	<code>GCSNCPLCButtonGetBorderID(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	3D border resource ID
 Details	Gets the 3D border resource ID.
 Example	Gets the GNCPLCButton00000 3D border resource ID in the self screen in Stat. LONG Stat; Stat = GCSNCPLCButtonGetBorderID(-1, "GNCPLCButton00000");

GCSNCPLCButtonSetOnDesign	Set ON status design
Syntax	<pre>GCSNCPLCButtonSetOnDesign(nWindowNo, strName, gmDesign);</pre>
Argument	<ul style="list-style-type: none">(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)(i) STRING strName : control name(i) GMEM gmDesign : global memory for design
Return value	None
Details	<p>Sets the design for ON status. After the design for ON status is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCPLCButton00000 ON status design in the self screen as follows:</p> <pre>Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2 mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetLong(mem, 12, 2); GCSNCPLCButtonSetOnDesign(-1, "GNCPLCButton00000", mem); GMEMDelete(mem);</pre>

GCSNCPLCButtonGetOnDesign	Get ON status design
Syntax	<pre>GCSNCPLCButtonGetOnDesign(nWindowNo, strName, gmDesign);</pre>
Argument	<ul style="list-style-type: none">(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)(i) STRING strName : control name(o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for ON status.
Example	<p>Gets the GNCPLCButton00000 ON status design in the self screen as follows:</p> <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSNCPLCButtonGetOnDesign(-1, "GNCPLCButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSNCPLCButtonSetOffDesign	Set OFF status design
Syntax	<code>GCSNCPLCButtonSetOffDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	Sets the design for OFF status. After the design for OFF status is set, the control area is registered as a redraw area.
Example	<p>Sets the GNCPLCButton00000 OFF status design in the self screen as follows:</p> <p>Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2</p> <pre>mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSNCPLCButtonSetOffDesign(-1, "GNCPLCButton00000", mem); GMEMDelete(mem);</pre>

GCSNCPLCButtonGetOffDesign	Get OFF status design
Syntax	<code>GCSNCPLCButtonGetOffDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for OFF status.
Example	<p>Gets the GNCPLCButton00000 OFF status design in the self screen as follows:</p> <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSNCPLCButtonGetOffDesign(-1, "GNCPLCButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSNCPLCButtonSetOnOnDesign	Set ONON status design
Syntax	<code>GCSNCPLCButtonSetOnOnDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	Sets the design for ONON status.
Example	<p>Sets the GNCPLCButton00000 ONON status design in the self screen as follows:</p> <p>Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2</p> <pre>mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSNCPLCButtonSetOnOnDesign(-1, "GNCPLCButton00000", mem); GMEMDelete(mem);</pre>

GCSNCPLCButtonGetOnOnDesign	Get ONON status design
Syntax	<pre>GCSNCPLCButtonGetOnOnDesign(nWindowNo, strName, gmDesign);</pre>
Argument	<ul style="list-style-type: none">(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)(i) STRING strName : control name(o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for ONON status.
Example	<p>Gets the GNCPLCButton00000 ONON status design in the self screen as follows:</p> <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSNCPLCButtonGetOnOnDesign(-1, "GNCPLCButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSNCPLCButtonSetOnOffDesign	Set ONOFF status design
Syntax	<code>GCSNCPLCButtonSetOnOffDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	Sets the design for ONOFF status.
Example	<p>Sets the GNCPLCButton00000 ONOFF status design in the self screen as follows:</p> <p>Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2</p> <pre>mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSNCPLCButtonSetOnOffDesign(-1, "GNCPLCButton00000", mem); GMEMDelete(mem);</pre>

GCSNCPLCButtonGetOnOffDesign	Get ONOFF status design
Syntax	GCSNCPLCButtonGetOnOffDesign(nWindowNo, strName, gmDesign);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for ONOFF status.
Example	<p>Gets the GNCPLCButton00000 ONOFF status design in the self screen as follows:</p> <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSNCPLCButtonGetOnOffDesign(-1, "GNCPLCButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSNCPLCButtonSetFocusDesign	Set FOCUS status design
Syntax	<code>GCSNCPLCButtonSetFocusDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design
Return value	None
Details	Sets the design for FOCUS status. After the design for FOCUS status is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCButton00000 FOCUS status design in the self screen as follows: Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2 <pre>mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSNCPLCButtonSetFocusDesign(-1, "GNCPLCButton00000", mem); GMEMDelete(mem);</pre>

GCSNCPLCButtonGetFocusDesign Get FOCUS status design	
Syntax	GCSNCPLCButtonGetFocusDesign(nWindowNo, strName, gmDesign);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for FOCUS status.
Example	Gets the GNCPLCButton00000 FOCUS status design in the self screen as follows: nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSNCPLCButtonGetFocusDesign(-1, "GNCPLCButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);

GCSNCPLCButtonSetDisableDesign		Set Disable status design
Syntax	GCSNCPLCButtonSetDisableDesign(nWindowNo, strName, gmDesign);	
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmDesign : global memory for design	
Return value	None	
Details	Sets the design for Disable status. After the design for Disable status is set, the control area is registered as a redraw area.	
Example	<p>Sets the GNCPLCButton00000 Disable status design in the self screen as follows:</p> <p>Fill pattern : 4 Foreground color : 0xffffffff Background color : 0x000000 Image resource ID : 2</p> <pre>mem = GMEMCreate("TESTMEM", 16); GMEMSetShort(mem, 0, 4); GMEMSetLong(mem, 4, HFFFFF); GMEMSetLong(mem, 8, H000000); GMEMSetShort(mem, 12, 2); GCSNCPLCButtonSetDisableDesign(-1, "GNCPLCButton00000", mem); GMEMDelete(mem);</pre>	

GCSNCPLCButtonGetDisableDesign	Get Disable status design
Syntax	<code>GCSNCPLCButtonGetDisableDesign(nWindowNo, strName, gmDesign);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmDesign : global memory for design
Return value	Store the acquired design in gmDesign.
Details	Gets the design for Disable status.
Example	<p>Gets the GNCPLCButton00000 Disable status design in the self screen as follows:</p> <pre>nPat : Fill pattern nFCol : Foreground color nBCol : Background color nImg : Image resource ID mem = GMEMCreate("TESTMEM", 16); GCSNCPLCButtonGetDisableDesign(-1, "GNCPLCButton00000", mem); nPat = GMEMGetShort(mem, 0); nFCol = GMEMGetLong(mem, 4); nBCol = GMEMGetLong(mem, 8); nImg = GMEMGetShort(mem, 12); GMEMDelete(mem);</pre>

GCSNCPLCButtonSetFontID	Set font resource ID
Syntax	<code>GCSNCPLCButtonSetFontID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : Font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCButton00000 font resource ID in the self screen to 1. <code>GCSNCPLCButtonSetFontID(-1, "GNCPLCButton00000", 1);</code>

GCSNCPLCButtonGetFontID	Get font resource ID
Syntax	<code>GCSNCPLCButtonGetFontID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GNCPLCButton00000 font resource ID in the self screen in Stat. LONG Stat; Stat=GCSNCPLCButtonGetFontID(-1,"GNCPLCButton0000");

GCSNCPLCButtonSetOnStringID	Set ON status caption character string resource ID
Syntax	<code>GCSNCPLCButtonSetOnStringID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : caption character string resource ID
Return value	None
Details	Sets the ON status caption character string resource ID. After the ON status caption character string resource ID is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCButton00000 ON status caption character string resource ID in the self screen to 1. <code>GCSNCPLCButtonSetOnStringID(-1, " GNCPLCButton00000", 1);</code>

GCSNCPLCButtonGetOnStringID	Get ON status caption character string resource ID
Syntax	<code>GCSNCPLCButtonGetOnStringID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID
Details	Gets the ON status caption character string resource ID.
Example	Gets the GNCPLCButton00000 ON status caption character string resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCButtonGetOnStringID(-1, " GNCPLCButton00000");</code>

GCSNCPLCButtonSetOffStringID	Set OFF status caption character string resource ID
 Syntax	<code>GCSNCPLCButtonSetOffStringID(nWindowNo, strName, usID);</code>
 Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(i) LONG usID : Font resource ID</p>
 Return value	None
 Details	<p>Sets the OFF status caption character string resource ID.</p> <p>After the OFF status caption character string resource ID is set, the control area is registered as a redraw area.</p>
 Example	<p>Sets the GNCPLCButton00000 OFF status caption character string resource ID in the self screen to 1.</p> <pre>GCSNCPLCButtonSetOffStringID(-1, " GNCPLCButton00000", 1);</pre>
GCSNCPLCButtonGetOffStringID	Get OFF status caption character string resource ID
 Syntax	<code>GCSNCPLCButtonGetOffStringID(nWindowNo, strName);</code>
 Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p>
 Return value	Caption character string resource ID
 Details	Gets the OFF status caption character string resource ID.
 Example	<p>Gets the GNCPLCButton00000 OFF status caption character string resource ID in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCButtonGetOffStringID(-1, " GNCPLCButton00000");</pre>

GCSNCPLCButtonSetOnOnStringID	Set ONON status caption character string resource ID
Syntax	<code>GCSNCPLCButtonSetOnOnStringID(nWindowNo, strName, usID);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : Font resource ID
Return value	None
Details	Sets the ONON status caption character string resource ID. After the ONON status caption character string resource ID is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCButton00000 ONON status caption character string resource ID in the self screen to 1. <code>GCSNCPLCButtonSetOnOnStringID(-1, " GNCPLCButton00000", 1);</code>

GCSNCPLCButtonGetOnOnStringID	Get ONON status caption character string resource ID
Syntax	<code>GCSNCPLCButtonGetOnOnStringID(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID
Details	Gets the ONON status caption character string resource ID.
Example	Gets the GNCPLCButton00000 ONON status caption character string resource ID in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCButtonGetOnOnStringID(-1, " GNCPLCButton00000");</code>

GCSNCPLCButtonSetOnOffStringID	Set ONOFF status caption character string resource ID
---------------------------------------	---

Syntax	<code>GCSNCPLCButtonSetOnOffStringID(nWindowNo, strName, usID);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : Font resource ID
Return value	None
Details	<p>Sets the ONOFF status caption character string resource ID. After the ONOFF status caption character string resource ID is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCPLCButton00000 ONOFF status caption character string resource ID in the self screen to 1.</p> <pre><code>GCSNCPLCButtonSetOnOffStringID(-1, " GNCPLCButton00000", 1);</code></pre>

GCSNCPLCButtonGetOnOffStringID	Get ONOFF status caption character string resource ID
---------------------------------------	---

Syntax	<code>GCSNCPLCButtonGetOnOffStringID(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Caption character string resource ID
Details	Gets the ONOFF status caption character string resource ID.
Example	<p>Gets the GNCPLCButton00000 ONOFF status caption character string resource ID in the self screen in Stat.</p> <pre><code>LONG Stat; Stat = GCSNCPLCButtonGetOnOffStringID(-1, " GNCPLCButton00000");</code></pre>

GCSNCPLCButtonSetCaption	Set caption information
Syntax	<code>GCSNCPLCButtonSetCaption(nWindowNo, strName, gmCaption);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	Sets the caption information. After the caption information is set, the control area is registered as a redraw area.
Example	<p>Sets the GNCPLCButton00000 caption information in the self screen as follows:</p> <p>Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0</p> <pre>mem = GMEMCreate("TESTMEM", 14); GMEMSetLong(mem, 0, HFFFFF); GMEMSetChar(mem, 4, 0); GMEMSetChar(mem, 5, 1); GMEMSetShort(mem, 6, 10); GMEMSetShort(mem, 8, 0); GMEMSetShort(mem, 10, 0); GMEMSetShort(mem, 12, 0); GCSNCPLCButtonSetCaption(-1, "GNCPLCButton00000", mem); GMEMDelete(mem);</pre>

GCSNCPLCButtonGetCaption	Get caption information
Syntax	GCSNCPLCButtonGetCaption(nWindowNo, strName, gmCaption);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmCaption : global memory for caption information
Return value	Store the acquired caption information in gmCaption.
Details	Gets the caption information.
Example	Gets the GNCPLCButton00000 caption information in the self screen as follows: nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin <pre> mem = GMEMCreate("TESTMEM", 14); GCSNCPLCButtonGetCaption(-1, "GNCPLCButton00000", mem); nCol = GMEMGetLong(mem, 0); nHPos = GMEMGetChar(mem, 4); nHPos = GMEMGetChar(mem, 5); nLMgn = GMEMGetShort(mem, 6); nRMgn = GMEMGetShort(mem, 8); nTMgn = GMEMGetShort(mem, 10); GMEMDelete(mem); </pre> nBMgn = GMEMGetShort(mem, 12);

GCSNCPLCButtonSetFocusEffect	Set effect during focus
Syntax	<code>GCSNCPLCButtonSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect: 0: design change 1: no effect After the effect during focus is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCButton00000 effect during focus in the self screen to 1. <code>GCSNCPLCButtonSetFocusEffect(-1, "GNCPLCButton00000", 1);</code>

GCSNCPLCButtonGetFocusEffect	Get effect during focus
Syntax	<code>GCSNCPLCButtonGetFocusEffect(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: design change 1: no effect Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GNCPLCButton00000 effect during focus in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCButtonGetFocusEffect(-1, "GNCPLCButton00000");</code>

GCSNCPLCButtonSetStatus	Set object status
Syntax	<code>GCSNCPLCButtonSetStatus(nWindowNo, strName, ucStatus);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucStatus : Object status
Return value	None
Details	Sets the GCNCPLCButton object ON/OFF status. One of the following values is set for ucStatus: 0: OFF status 1: ON status After the GCNCPLCButton object ON/OFF is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCButton00000 ON/OFF status in the self screen to 1. <code>GCSNCPLCButtonSetStatus(-1, "GNCPLCButton00000", 1);</code>

GCSNCPLCButtonGetStatus	Get object status
Syntax	<code>GCSNCPLCButtonGetStatus(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Object status 0: OFF status 1: ON status
Details	Gets the GCNCPLCButton object status.
Example	Gets the GNCPLCButton00000 ON/OFF status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCButtonGetStatus(-1, "GNCPLCButton00000");</code>

GCSNCPLCButtonSetDeviceType		PLC device operation
 Syntax	GCSNCPLCButtonSetDeviceType(nWindowNo, strName, ucIndex ,ucType);	
 Argument	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i) STRING strName	: control name
	(i) LONG ucIndex	: PLC device index No.
		0 : PLC device 1
		1 : PLC device 2
	(i) LONG ucType	: PLC device operation
		0 : No setting
		1 : Reading
		2 : Writing
 Return value	Setting result	
	0 : Abnormal (index No. illegal)	
	1: Normal	
 Details	Sets the PLC device operation to allocate to the control.	
 Example	Sets PLC device 1 operation to the reading in GNCPLCButton00000 in the self screen. LONG Stat; Stat = GCSNCPLCButtonSetDeviceType(-1, "GNCPLCButton00000", 0, 1);	

GCSNCPLCButtonGetDeviceType		Get PLC device operations
 Syntax	GCSNCPLCButtonGetDeviceType(nWindowNo, strName, ucIndex, gmType);	
 Argument	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i) STRING strName	: control name
	(i) LONG ucIndex	: PLC device index No.
		0 : PLC device 1
		1 : PLC device 2
	(o) GMEM gmType	: global memory to store PLC device operations
		0 : No setting
		1 : Reading
		2 : Writing
 Return value	Getting result	
	0 : Abnormal (index No. illegal)	
	1: Normal	
 Details	Gets the PLC device operation allocated to the control.	
 Example	Gets PLC device 1 operation in GNCPLCButton00000 in the self screen as nVal : LONG integer value. GMEM mem; LONG nVal; mem = GMEMCreate("TESTMEM", 4) ; GCSNCPLCButtonGetDeviceType(-1, "GNCPLCButton00000", 0, mem) ; nVal = GMEMGetLong(mem, 0) ; GMEMDelete(mem);	

GCSNCPLCButtonSetDevice	Set PLC device												
Syntax	<code>GCSNCPLCButtonSetDevice(nWindowNo, strName, uIndex, pszDevice);</code>												
Argument	<table><tr><td>(i) LONG nWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr><tr><td>(i) STRING strName</td><td>: control name</td></tr><tr><td>(i) LONG uIndex</td><td>: PLC device index No.</td></tr><tr><td></td><td>0 : PLC device 1</td></tr><tr><td></td><td>1 : PLC device 2</td></tr><tr><td>(i) STRING pszDevice</td><td>: PLC device character string</td></tr></table>	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)	(i) STRING strName	: control name	(i) LONG uIndex	: PLC device index No.		0 : PLC device 1		1 : PLC device 2	(i) STRING pszDevice	: PLC device character string
(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)												
(i) STRING strName	: control name												
(i) LONG uIndex	: PLC device index No.												
	0 : PLC device 1												
	1 : PLC device 2												
(i) STRING pszDevice	: PLC device character string												
Return value	<table><tr><td>Setting result</td></tr><tr><td>0: Abnormal</td></tr><tr><td>1: Normal</td></tr></table>	Setting result	0: Abnormal	1: Normal									
Setting result													
0: Abnormal													
1: Normal													
Details	Sets the PLC device address to allocate to the control.												
Example	<p>Sets "X0" to PLC device of PLC device 1 in GNCPLCButton00000 in the self screen.</p> <pre>LONG Stat; Stat = GCSNCPLCButtonSetDevice(-1, "GNCPLCButton00000", 0, "X0");</pre>												

GCSNCPLCButtonGetDevice	Get PLC device
Syntax	GCSNCPLCButtonGetDevice(nWindowNo, strName, ucIndex, pszDevice);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucIndex : PLC device index No. 0 : PLC device 1 1 : PLC device 2 (o) STRING pszDevice : PLC device
Return value	Getting result 0: Abnormal 1: Normal
Details	Gets the PLC device address allocated to the control.
Example	Sets PLC device of PLC device 1 to strStat in GNCPLCButton00000 in the self screen. STRING strStat; GCSNCPLCButtonGetDevice(-1, "GNCPLCButton00000", 0, strStat);

GCSNCPLCButtonSetDeviceVal		Set PLC device value
Syntax	GCSNCPLCButtonSetDeviceVal(nWindowNo, strName, ucIndex, ucVal);	
Argument	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i) STRING strName	: control name
	(i) LONG ucIndex	: PLC device index No.
		0 : PLC device 1
		1 : PLC device 2
	(i) LONG ucVal	: PLC device value
Return value	Setting result 0x5002 : Index illegal 0x5003 : Writing failure 0x0 : Normal	
Details	Sets the PLC device value to allocate to the control.	
Example	Sets 1 to PLC device value of PLC device 1 in GNCPLCButton00000 in the self screen. LONG Stat; Stat = GCSNCPLCButtonSetDeviceVal(-1, "GNCPLCButton00000", 0, 1);	

GCSNCPLCButtonGetDeviceVal	Get PLC device value
 Syntax	<code>GCSNCPLCButtonGetDeviceVal(nWindowNo, strName, ucIndex, gmVal);</code>
 Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(i) LONG ucIndex : PLC device index No.</p> <p> 0 : PLC device 1</p> <p> 1 : PLC device 2</p> <p>(o) GMEM gmVal : global memory to store PLC device value</p>
 Return value	<p>Getting result</p> <p>0x5002 : Index illegal</p> <p>0x5003 : Reading failure</p> <p>0x0 : Normal</p>
 Details	Gets the PLC device value allocated to the control.
 Example	<p>Gets PLC device value of PLC device 1 in GNCPLCButton00000 in the self screen as nVal : LONG integer value.</p> <pre>GMEM mem; LONG nVal; mem = GMEMCreate("TESTMEM", 4); GCSNCPLCButtonGetDeviceVal(-1, " GNCPLCButton00000", 0, mem); nVal = GMEMGetLong(mem, 0); GMEMDelete(mem);</pre>

5.15 NCPLCTextbox

GCSNCPLCTextboxSetBorderID Set 3D border resource ID

 Syntax GCSNCPLCTextboxSetBorderID(nWindowNo, strName, usID);

 Argument (i) LONG nWindowNo : screen No. (Specify -1 for self screen.)
 (i) STRING strName : control name
 (i) LONG usID : 3D border resource ID

 Return value None

 Details Sets the 3D border resource ID.
 After the 3D border resource ID is set, the control area is registered as a redraw area.

 Example Sets the GNCPLCTextBox00000 3D border resource ID in the self screen to 1.
 GCSNCPLCTextboxSetBorderID(-1, "GNCPLCTextBox00000", 1);

GCSNCPLCTextboxGetBorderID Get 3D border resource ID

 Syntax GCSNCPLCTextboxGetBorderID(nWindowNo, strName);

 Argument (i) LONG nWindowNo : screen No. (Specify -1 for self screen.)
 (i) STRING strName : control name

 Return value 3D border resource ID

 Details Gets the 3D border resource ID.

 Example Gets the GNCPLCTextBox00000 3D border resource ID in the self screen in Stat.
 LONG Stat;
 Stat = GCSNCPLCTextboxGetBorderID(-1, "GNCPLCTextBox00000");

GCSNCPLCTextboxSetFontID	Set font resource ID
Syntax	GCSNCPLCTextboxSetFontID(nWindowNo, strName, usID);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG usID : Font resource ID
Return value	None
Details	Sets the font resource ID. After the font resource ID is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCTextBox00000 font resource ID in the self screen to 1. <code>GCSNCPLCTextboxSetFontID(-1, "GNCPLCTextBox00000", 1);</code>

GCSNCPLCTextboxGetFontID	Get font resource ID
Syntax	GCSNCPLCTextboxGetFontID(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GNCPLCTextBox00000 font resource ID in the self screen in Stat. <code>Stat = GCSNCPLCTextboxGetFontID(-1, "GNCPLCTextBox00000");</code>

GCSNCPLCTextboxSetCaption	Set caption information
Syntax	<code>GCSNCPLCTextboxSetCaption(nWindowNo, strName, gmCaption);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmCaption : global memory for caption information
Return value	None
Details	<p>Sets the caption information. After the caption information is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCPLCTextBox00000 caption information in the self screen as follows:</p> <pre> Color : White (0xffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 mem = GMEMCreate("TESTMEM", 14) ; GMEMSetLong(mem, 0, HFFFFF) ; GMEMSetChar(mem, 4, 0) ; GMEMSetChar(mem, 5, 1) ; GMEMSetShort(mem, 6, 10) ; GMEMSetShort(mem, 8, 0) ; GMEMSetShort(mem, 10, 0) ; GMEMSetShort(mem, 12, 0) ; GCSNCPLCTextboxSetCaption(-1, "GNCPLCTextBox00000", mem) ; GMEMDelete(mem); </pre>

GCSNCPLCTextboxGetCaption	Get caption information
Syntax	<pre>GCSNCPLCTextboxGetCaption(nWindowNo, strName, gmCaption);</pre>
Argument	<ul style="list-style-type: none">(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)(i) STRING strName : control name(o) GMEM gmCaption : global memory for caption information
Return value	Store the acquired caption information in gmCaption.
Details	Gets the caption information setting.
Example	<pre>Gets the GNCPLCTextBox00000 caption information in the self screen as follows: nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14) ; GCSNCPLCTextboxGetCaption(-1, "GNCPLCTextBox00000", mem) ; nCol = GMEMGetLong(mem, 0) ; nHPos = GMEMGetChar(mem, 4) ; nHPos = GMEMGetChar(mem, 5) ; nLMgn = GMEMGetShort(mem, 6) ; nRMgn = GMEMGetShort(mem, 8) ; nTMgn = GMEMGetShort(mem, 10) ; nBMgn = GMEMGetShort(mem, 12) ; GMEMDelete(mem);</pre>

GCSNCPLCTextboxSetFocusEffect	Set effect during focus
Syntax	<code>GCSNCPLCTextboxSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect: 0: design change 1: no effect After the effect during focus is set, the control area is registered as a redraw area.
Example	Sets the GNCPLCTextBox00000 effect during focus in the self screen to 1. <code>GCSNCPLCTextboxSetFocusEffect(-1, "GNCPLCTextBox00000", 1);</code>

GCSNCPLCTextboxGetFocusEffect	Get effect during focus
Syntax	<code>GCSNCPLCTextboxGetFocusEffect(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: design change 1: no effect Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GNCPLCTextBox00000 effect during focus in the self screen in Stat. LONG Stat; Stat = GCSNCPLCTextboxGetFocusEffect(-1, "GNCPLCTextBox00000");

GCSNCPLCTextboxSetFocusColor	Set background color during focus
Syntax	<code>GCSNCPLCTextboxSetFocusColor(nWindowNo, strName, gcColor);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : Color code for background color during focus
Return value	None
Details	<p>Sets the background color during focus. After the background color during focus is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCPLCTextBox00000 background color during focus in the self screen to white (0xffffffff).</p> <pre><code>GCSNCPLCTextboxSetFocusColor(-1, "GNCPLCTextBox00000", HFFFFFFF);</code></pre>

GCSNCPLCTextboxGetFocusColor	Get background color during focus
Syntax	<code>GCSNCPLCTextboxGetFocusColor(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for background color during focus
Details	Gets the background color during focus.
Example	<p>Gets the GNCPLCTextBox00000 background color during focus in the self screen in Stat.</p> <pre><code>LONG Stat; Stat = GCSNCPLCTextboxGetFocusColor(-1, "GNCPLCTextBox00000");</code></pre>

GCSNCPLCTextboxSetNormalColor	Set normal background color
Syntax	GCSNCPLCTextboxSetNormalColor(nWindowNo, strName, gcColor);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG gcColor : Color code for normal background color
Return value	None
Details	<p>Sets the normal background color.</p> <p>After the normal background color is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCPLCTextBox00000 normal background color in self screen to white (0xffffffff).</p> <pre>GCSNCPLCTextboxSetNormalColor(-1, "GNCPLCTextBox00000", HFFFFFF) ;</pre>

GCSNCPLCTextboxGetNormalColor	Get normal background color
Syntax	GCSNCPLCTextboxGetNormalColor(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Color code for normal background color
Details	Gets the normal background color.
Example	<p>Gets the GNCPLCTextBox00000 normal background color in self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetNormalColor(-1, "GNCPLCTextBox00000") ;</pre>

GCSNCPLCTextboxSetDisableColor	Set background color when disabled
Syntax	<code>GCSNCPLCTextboxSetDisableColor(nWindowNo, strName, gcColor);</code>
Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(i) LONG gcColor : color code for background color when disabled</p>
Return value	None
Details	<p>Sets the background color when disabled.</p> <p>After the background color when disabled is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCPLCTextBox00000 background color when disabled in the self screen to white (0xffffffff).</p> <pre>GCSNCPLCTextboxSetDisableColor(-1, "GNCPLCTextBox00000", HFFFFFF) ;</pre>

GCSNCPLCTextboxGetDisableColor	Get background color when disabled
Syntax	<code>GCSNCPLCTextboxGetDisableColor(nWindowNo, strName);</code>
Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p>
Return value	Color code for background color setting when disabled
Details	Gets the background color when disabled.
Example	<p>Gets the GNCPLCTextBox00000 background color when disabled in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetDisableColor(-1, "GNCPLCTextBox00000") ;</pre>

GCSNCPLCTextboxSetTextType	Set character string type												
Syntax	<code>GCSNCPLCTextboxSetTextType(nWindowNo, strName, ucType);</code>												
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucType : character string type												
Return value	None												
Details	<p>Sets the character string type. One of the following values is set for ucType:</p> <table> <tr><td>GPLCTEXT_TYPE_DEC(1)</td><td>: Signed decimal integer</td></tr> <tr><td>GPLCTEXT_TYPE_UDEC(2)</td><td>: Unsigned decimal integer</td></tr> <tr><td>GPLCTEXT_TYPE_HEX(3)</td><td>: Hexadecimal integer</td></tr> <tr><td>GPLCTEXT_TYPE_FLOAT(4)</td><td>: Real number (float)</td></tr> <tr><td>GPLCTEXT_TYPE_DOUBLE(5)</td><td>: Real number (double)</td></tr> <tr><td>GPLCTEXT_TYPE_STRING(6)</td><td>: Character sequence</td></tr> </table> <p>After the character string type is set, the control area is registered as a <u>redraw area</u>.</p>	GPLCTEXT_TYPE_DEC(1)	: Signed decimal integer	GPLCTEXT_TYPE_UDEC(2)	: Unsigned decimal integer	GPLCTEXT_TYPE_HEX(3)	: Hexadecimal integer	GPLCTEXT_TYPE_FLOAT(4)	: Real number (float)	GPLCTEXT_TYPE_DOUBLE(5)	: Real number (double)	GPLCTEXT_TYPE_STRING(6)	: Character sequence
GPLCTEXT_TYPE_DEC(1)	: Signed decimal integer												
GPLCTEXT_TYPE_UDEC(2)	: Unsigned decimal integer												
GPLCTEXT_TYPE_HEX(3)	: Hexadecimal integer												
GPLCTEXT_TYPE_FLOAT(4)	: Real number (float)												
GPLCTEXT_TYPE_DOUBLE(5)	: Real number (double)												
GPLCTEXT_TYPE_STRING(6)	: Character sequence												
Example	Sets the GNCPLCTextBox00000 display character string type in the self screen to 1. <code>GCSNCPLCTextboxSetTextType(-1, "GNCPLCTextBox00000", 1);</code>												

GCSNCPLCTextboxGetTextType	Get character string type												
Syntax	<code>GCSNCPLCTextboxGetTextType(nWindowNo, strName);</code>												
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name												
Return value	<table> <tr><td>GPLCTEXT_TYPE_DEC(1)</td><td>: Signed decimal integer</td></tr> <tr><td>GPLCTEXT_TYPE_UDEC(2)</td><td>: Unsigned decimal integer</td></tr> <tr><td>GPLCTEXT_TYPE_HEX(3)</td><td>: Hexadecimal integer</td></tr> <tr><td>GPLCTEXT_TYPE_FLOAT(4)</td><td>: Real number (float)</td></tr> <tr><td>GPLCTEXT_TYPE_DOUBLE(5)</td><td>: Real number (double)</td></tr> <tr><td>GPLCTEXT_TYPE_STRING(6)</td><td>: Character sequence</td></tr> </table>	GPLCTEXT_TYPE_DEC(1)	: Signed decimal integer	GPLCTEXT_TYPE_UDEC(2)	: Unsigned decimal integer	GPLCTEXT_TYPE_HEX(3)	: Hexadecimal integer	GPLCTEXT_TYPE_FLOAT(4)	: Real number (float)	GPLCTEXT_TYPE_DOUBLE(5)	: Real number (double)	GPLCTEXT_TYPE_STRING(6)	: Character sequence
GPLCTEXT_TYPE_DEC(1)	: Signed decimal integer												
GPLCTEXT_TYPE_UDEC(2)	: Unsigned decimal integer												
GPLCTEXT_TYPE_HEX(3)	: Hexadecimal integer												
GPLCTEXT_TYPE_FLOAT(4)	: Real number (float)												
GPLCTEXT_TYPE_DOUBLE(5)	: Real number (double)												
GPLCTEXT_TYPE_STRING(6)	: Character sequence												
Details	Gets the display character string type.												
Example	Gets the GNCPLCTextBox00000 display character string type in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCTextboxGetTextType(-1, "GNCPLCTextBox00000");</code>												

GCSNCPLCTextboxSetTextSize	Set size
Syntax	<code>GCSNCPLCTextboxSetTextSize(nWindowNo, strName, ucSize);</code>
Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(i) LONG ucSize : PLC device size</p> <p> 2 : 2 byte</p> <p> 4 : 4 byte</p>
Return value	None
Details	<p>Sets the PLC device size to allocate to the control.</p> <p>After the PLC device size is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCPLCTextBox00000 PLC device size in the self screen to 2 byte.</p> <pre>GCSNCPLCTextboxSetTextSize(-1, "GNCPLCTextBox00000", 2);</pre>

GCSNCPLCTextboxGetTextSize	Get size
Syntax	<code>GCSNCPLCTextboxGetTextSize(nWindowNo, strName);</code>
Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p>
Return value	<p>PLC device size</p> <p> 2 : 2 byte</p> <p> 4 : 4 byte</p>
Details	Gets the PLC device size allocated to the control.
Example	<p>Gets the GNCPLCTextBox00000 PLC device size in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetTextSize(-1, "GNCPLCTextBox00000");</pre>

GCSNCPLCTextboxSetPasswordStatus	Set password display status
 Syntax	<code>GCSNCPLCTextboxSetPasswordStatus(nWindowNo, strName, fStatus);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : password display status
 Return value	None
 Details	Sets whether the password will be displayed for text boxes or not. One of the following values is set for fStatus: 0: normal display status 1: password display status After the password display status is set, the control area is registered as a redraw area.
 Example	Sets the GNCPLCTextBox00000 password display status in the self screen to 1. <code>GCSNCPLCTextboxSetPasswordStatus(-1, "GNCPLCTextBox00000", 1);</code>

GCSNCPLCTextboxGetPasswordStatus	Get password display status
 Syntax	<code>GCSNCPLCTextboxGetPasswordStatus(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	0: normal display status 1: password display status
 Details	Gets whether the test box display status is normal display status or the password display status.
 Example	Gets the GNCPLCTextBox00000 password display status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCTextboxGetPasswordStatus(-1, "GNCPLCTextBox00000");</code>

GCSNCPLCTextboxSetCommaStatus	Set comma display status
 Syntax	<code>GCSNCPLCTextboxSetCommaStatus(nWindowNo, strName, fStatus);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : comma display status
 Return value	None
 Details	Sets whether commas will be displayed or not for text boxes. One of the following values is set for fStatus: 0: normal display status 1: comma display status After the comma display status is set, the control area is registered as a redraw area.
 Example	Sets the GNCPLCTextBox00000 comma display status in the self screen to 1. <code>GCSNCPLCTextboxSetCommaStatus(-1, "GNCPLCTextBox00000", 1);</code>

GCSNCPLCTextboxGetCommaStatus	Get comma display status
 Syntax	<code>GCSNCPLCTextboxGetCommaStatus(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	0: normal display status 1: comma display status
 Details	Gets the setting as to whether the test box display status is normal display status or the comma display status.
 Example	Gets the GNCPLCTextBox00000 comma display status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCTextboxGetCommaStatus(-1, "GNCPLCTextBox00000");</code>

GCSNCPLCTextboxSetCheckMaxStatus	Set maximum value check status
 Syntax	<code>GCSNCPLCTextboxSetCheckMaxStatus(nWindowNo, strName, fStatus);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : setting for maximum value check status
 Return value	None
 Details	<p>Sets the status of the maximum value check during input/output for the text box.</p> <p>One of the following values is set for fStatus:</p> <ul style="list-style-type: none"> 0: Maximum value check disabled 1: Maximum value check enabled
 Example	<p>Sets the GNCPLCTextBox00000 maximum value check status in the self screen to 1.</p> <pre>GCSNCPLCTextboxSetCheckMaxStatus(-1, "GNCPLCTextBox00000", 1);</pre>

GCSNCPLCTextboxGetCheckMaxStatus	Get maximum value check status
 Syntax	<code>GCSNCPLCTextboxGetCheckMaxStatus(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	<ul style="list-style-type: none"> 0: check disabled 1: check enabled
 Details	Gets the status of the maximum value check during input/output from the text box.
 Example	<p>Gets the GNCPLCTextBox00000 maximum value check status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetCheckMaxStatus(-1, "GNCPLCTextBox00000");</pre>

GCSNCPLCTextboxSetCheckMinStatus	Set minimum value check status
 Syntax	<code>GCSNCPLCTextboxSetCheckMinStatus(nWindowNo, strName, fStatus);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : setting for minimum value check status
 Return value	None
 Details	<p>Sets the status of the minimum value check during input/output for the text box.</p> <p>One of the following values is set for fStatus:</p> <ul style="list-style-type: none"> 0: Minimum value check disabled 1: Minimum value check enabled
 Example	<p>Sets the GNCPLCTextBox00000 minimum value check status in the self screen to 1.</p> <pre>GCSNCPLCTextboxSetCheckMinStatus(-1, "GNCPLCTextBox00000", 1);</pre>

GCSNCPLCTextboxGetCheckMinStatus	Get minimum value check status
 Syntax	<code>GCSNCPLCTextboxGetCheckMinStatus(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	<ul style="list-style-type: none"> 0: check disabled 1: check enabled
 Details	Gets the status of the minimum value check during input/output from the text box.
 Example	<p>Gets the GNCPLCTextBox00000 minimum value check status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetCheckMinStatus(-1, "GNCPLCTextBox00000");</pre>

GCSNCPLCTextboxSetMaxGValue	Set maximum value
Syntax	<code>GCSNCPLCTextboxSetMaxGValue(nWindowNo, strName, gmValue);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmValue : maximum value
Return value	None
Details	Sets the value of the maximum value check during input/output for the text box.
Example	Sets the value of GNCPLCTextBox00000 maximum value check in the self screen to 100. <code>GCSNCPLCTextboxSetMaxGValue(-1, "GNCPLCTextBox00000", 100);</code>

GCSNCPLCTextboxGetMaxGValue	Get maximum value
Syntax	<code>GCSNCPLCTextboxGetMaxGValue(nWindowNo, strName, gmValue);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmValue : maximum value
Return value	Store the maximum value in gmValue.
Details	Gets the value of the maximum value check during input/output from the text box.
Example	Gets the value of GNCPLCTextBox00000 maximum value check in the self screen in nMax. <code>LONG nMax; mem = GMEMCreate("TESETMEM", 4); GCSNCPLCTextboxGetMaxGValue(-1, "GNCPLCTextBox00000", mem); nMax = GMEMGetLong(mem,0); GMEMDelete(mem);</code>

GCSNCPLCTextboxSetMinGValue	Set minimum value
Syntax	<code>GCSNCPLCTextboxSetMinGValue(nWindowNo, strName, gmValue);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmValue : minimum value
Return value	None
Details	Sets the value of the minimum value check during input/output for the text box.
Example	Sets the value of GNCPLCTextBox00000 minimum value check in the self screen to 1. <code>GCSNCPLCTextboxSetMinGValue(-1, "GNCPLCTextBox00000", 1);</code>

GCSNCPLCTextboxGetMinGValue	Get minimum value
Syntax	<code>GCSNCPLCTextboxGetMinGValue(nWindowNo, strName, gmValue);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmValue : minimum value
Return value	Store the minimum value in gmValue.
Details	Gets the value of the minimum value check during input/output from the text box.
Example	Gets the value of GNCPLCTextBox00000 minimum value check in the self screen in nMix. <code>LONG nMix; mem = GMEMCreate("TESETMEM", 4); GCSNCPLCTextboxGetMinGValue(-1, "GNCPLCTextBox00000", mem); nMix = GMEMGetLong(mem,0); GMEMDelete(mem);</code>

GCSNCPLCTextboxSetString		Set display character string
Syntax	GCSNCPLCTextboxSetString(nWindowNo, strName, pString);	
Argument	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i) STRING strName	: control name
	(i) STRING pString	: display character string
Return value	0: setting succeeded 0x6002: illegal value 0x6003: less than minimum value 0x6004: greater than maximum value 0x6005: writing failure 0x6007: failed to reserve memory 0x6008: over than maximum number of characters 0x600A: interlocked	
Details	<p>Sets the display character string. (Note 1) By executing the display character string setting, data will be written in the PLC. (Note 2) Character strings can be set even when the focus is not placed on the PLC text box. (Note 3) Controls are not specified during interlock and an error "0x600A (interlocked)" is returned in the return value.</p>	
Example	<p>Sets the character string "ABCD" in GNCPLCTextBox00000 in the self screen.</p> <pre>GCSNCPLCTextboxSetString(-1, "GNCPLCTextBox00000", "ABCD");</pre>	

GCSNCPLCTextboxGetString	Get display character string
Syntax	GCSNCPLCTextboxGetString(nWindowNo, strName, pString);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) STRING pString : display character string
Return value	0: acquisition succeeded Other than 0: acquisition failed
Details	Stores the display character string in pString. (Note 1) "Get display character string" will acquire data from the PLC. (Note 2) When the focus is placed on the text box, the data displayed in the PLC text box and the PLC data may differ. In that case, PLC data will be acquired.
Example	Gets the GNCPLCTextBox00000 display character string in the self screen in Stat. STRING strStat; GCSNCPLCTextboxGetString(-1, "GNCPLCTextBox00000", strStat);

GCSNCPLCTextboxSetGValue	Set PLC device value
Syntax	GCSNCPLCTextboxSetGValue(nWindowNo, strName, gmValue);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmValue : global memory for setting value
Return value	0: normal value 0x6003: less than minimum value 0x6004: greater than maximum value 0x6005: writing failure 0x6007: failed to reserve memory 0x6008: over than maximum number of characters 0x6009: illegal type 0x600A: interlocked
Details	<p>Sets the PLC device value to allocate to the control.</p> <p>After the PLC device value is set, the control area is registered as a redraw area.</p> <p>(Note 1) The character string, which is converted from PLC device value according to the display format, is displayed in the PLC text box.</p> <p>(Note 2) If the number of characters after the conversion is over the value of the "maximum number of characters" of the properties, the "over maximum number of characters" will be returned. Even when it is over the "maximum number of characters", it sets the value onto the PLC device, a character string after the conversion which is limited to the "maximum number of characters" is displayed.</p> <p>(Note 3) Use the function "GCSNCPLCTextboxSetString", if a real number (float) or a real number (double) is set to the "type" of the properties.</p> <p>(Note 4) If "Character sequence" is set to the "type" of the properties, "illegal type" will be returned.</p> <p>(Note 5) Controls are not specified during interlock and an error "0x600A (interlocked)" is returned in the return value.</p>

 Example	Sets the LONG integer value 100 to the PLC device set to the GNCPLCTextBox00000 in the self screen. <pre>GMEM mem; GCSNCPLCTextboxSetTextType (-1, "GNCPLCTextBox00000", 3); mem = GMEMCreate("TESTMEM", 4) ; GMEMSetLong(mem, 0, 100) ; GCSNCPLCTextboxSetGValue(-1, "GNCPLCTextBox00000", mem) ; GMEMDelete(mem);</pre>
---	--

GCSNCPLCTextboxGetGValue	Get PLC device value
Syntax	<code>GCSNCPLCTextboxGetGValue(nWindowNo, strName, gmValue);</code>
Argument	<p>(i) LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i) STRING strName : control name</p> <p>(o) GMEM gmValue : global memory to store numerical value</p>
Return value	<p>0: normal value</p> <p>0x6002: illegal value</p> <p>0x6003: less than minimum value</p> <p>0x6004: more than maximum value</p> <p>0x6009: illegal type</p>
Details	<p>Gets the PLC device value allocated to the control.</p> <p>(Note 1) The character string, which is converted from PLC device value according to the display format, is displayed in the PLC text box.</p> <p>(Note 2) Use the function "GCSNCPLCTextboxSetString", if a real number (float) or a real number (double) is set to the "type" of the properties.</p> <p>(Note 3) If "Character sequence" is set to the "type" of the properties, "illegal type" will be returned.</p>
Example	<p>Gets the PLC device value as nVal : LONG integer value from the PLC device set on GNCPLCTextBox00000 in the screen No.10.</p> <pre>GMEM mem; LONG nVal; mem = GMEMCreate("TESTMEM", 4) ; GCSNCPLCTextboxGetGValue(10, "GNCPLCTextBox00000", mem) ; nVal = GMEMGetLong(mem, 0) ; GMEMDelete(mem);</pre>

GCSNCPLCTextboxSetBackGroundPattern	Set background fill status
 Syntax	<code>GCSNCPLCTextboxSetBackGroundPattern(nWindowNo, strName, nBackGroundPattern);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nBackGroundPattern : background fill status
 Return value	None
 Details	Sets the background color fill status. One of the following values is set for nBackGroundPattern: -1: no fill -2: with background fill
 Example	Sets the GNCPLCTextBox00000 background fill status in the self screen to -2. <code>GCSNCPLCTextboxSetBackGroundPattern(-1, "GNCPLCTextBox00000", -2);</code>

GCSNCPLCTextboxGetBackGroundPattern	Get background fill status
 Syntax	<code>GCSNCPLCTextboxGetBackGroundPattern(nWindowNo, strName);</code>
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Background fill status -1: no fill -2: with background fill
 Details	Gets the background color fill status.
 Example	Gets the GNCPLCTextBox00000 background fill status in the self screen in Stat. LONG Stat; Stat = <code>GCSNCPLCTextboxGetBackGroundPattern(-1, "GNCPLCTextBox00000");</code>

GCSNCPLCTextboxSetIntegerWidth	Set integer part width
Syntax	<code>GCSNCPLCTextboxSetIntegerWidth(nWindowNo, strName, ucWidth);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucWidth : The number of integer part figures
Return value	None
Details	Sets the number of integer part figures.
Example	Sets the GNCPLCTextBox00000 the number of integer part figures in the self screen to 2. <code>GCSNCPLCTextboxSetIntegerWidth(-1, "GNCPLCTextBox00000", 2);</code>

GCSNCPLCTextboxGetIntegerWidth	Get integer part width
Syntax	<code>GCSNCPLCTextboxGetIntegerWidth(nWindowNo, strName);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	The number of integer part figures
Details	Gets the number of integer part figures.
Example	Gets the GNCPLCTextBox00000 the number of integer part figures in the self screen in Stat. LONG Stat; Stat = GCSNCPLCTextboxGetIntegerWidth(-1, "GNCPLCTextBox00000");

GCSNCPLCTextboxSetDecimalWidth	Set decimal part width
Syntax	<code>GCSNCPLCTextboxSetDecimalWidth(nWindowNo, strName, ucWidth);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ucWidth : The number of decimal part figures
Return value	None
Details	Sets the number of decimal part figures.
Example	<p>Sets the GNCPLCTextBox00000 the number of decimal part figures in the self screen to 2.</p> <pre>GCSNCPLCTextboxSetDecimalWidth(-1, "GNCPLCTextBox00000", 2);</pre>

GCSNCPLCTextboxGetDecimalWidth	Get decimal part width
Syntax	<code>GCSNCPLCTextboxGetDecimalWidth(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	The number of decimal part figures
Details	Gets the number of decimal part figures.
Example	<p>Gets the GNCPLCTextBox00000 the number of decimal part figures in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetDecimalWidth(-1, "GNCPLCTextBox00000");</pre>

GCSNCPLCTextboxSetScale	Set scale
Syntax	<code>GCSNCPLCTextboxSetScale(nWindowNo, strName, gmScale);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) GMEM gmScale : global memory for scale
Return value	None
Details	Sets the scale.
Example	Sets the scale of GNCPLCTextBox00000 in the self screen as 64bit floating point value : 2.5. <pre>GMEM mem; mem = GMEMCreate("TESTMEM", 8) ; GMEMSetDouble(mem, 0, 2.5) ; GCSNCPLCTextboxSetScale(-1, " GNCPLCTextBox00000", mem) ; GMEMDelete(mem);</pre>

GCSNCPLCTextboxGetScale	Get scale
Syntax	<code>GCSNCPLCTextboxGetScale(nWindowNo, strName, gmScale);</code>
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) GMEM gmScale : global memory to store scale
Return value	None
Details	Gets the scale.
Example	Gets the scale of GNCPLCTextBox00000 in the self screen as dVal: 64bit floating point value. <pre>GMEM mem; DOUBLE dVal; mem = GMEMCreate("TESTMEM", 8) ; GCSNCPLCTextboxGetScale(-1, "GNCPLCTextBox00000", mem) ; dVal = GMEMGetDouble(mem, 0) ; GMEMDelete(mem);</pre>

GCSNCPLCTextboxSetOffset	Set offset
Syntax	GCSNCPLCTextboxSetOffset(nWindowNo, strName, ulOffset);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG ulOffset : offset
Return value	None
Details	Sets the offset.
Example	Sets the GNCPLCTextBox00000 offset in the self screen to 100. GCSNCPLCTextboxSetOffset(-1, "GNCPLCTextBox00000", 100);

GCSNCPLCTextboxGetOffset	Get offset
Syntax	GCSNCPLCTextboxGetOffset(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	Offset
Details	Gets the offset.
Example	Gets the GNCPLCTextBox00000 offset in the self screen in Stat. LONG Stat; Stat = GCSNCPLCTextboxGetOffset(-1, "GNCPLCTextBox00000");

GCSNCPLCTextboxSetDevice	Set PLC device
 Syntax	<code>GCSNCPLCTextboxSetDevice(nWindowNo, strName, pszDevice);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszDevice : PLC device character string
 Return value	<p>Setting result</p> <p>0: Abnormal</p> <p>1: Normal</p>
 Details	Sets the PLC device address to allocate to the control.
 Example	<p>Sets "X0" to GNCPLCTextBox00000 PLC device in the self screen.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxSetDevice(-1, "GNCPLCTextBox00000", "X0");</pre>

GCSNCPLCTextboxGetDevice	Get PLC device
 Syntax	<code>GCSNCPLCTextboxGetDevice(nWindowNo, strName, pszDevice);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) STRING pszDevice : PLC device
 Return value	<p>Getting result</p> <p>0: Abnormal</p> <p>1: Normal</p>
 Details	Gets the PLC device address allocated to the control.
 Example	<p>Gets the GNCPLCTextBox00000 PLC device in the self screen in strStat.</p> <pre>STRING strStat; GCSNCPLCTextboxGetDevice(-1, "GNCPLCTextBox00000", strStat);</pre>

GCSNCPLCTextboxSetZeroSuppressStatus	Set zero suppress display status
 Syntax	<code>GCSNCPLCTextboxSetZeroSuppressStatus (nWindowNo, strName, fStatus);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG fStatus : zero suppress setting 1 : zero suppress enabled 0 : zero suppress disabled
 Return value	None
 Details	Sets the zero suppress display status.
 Example	<p>Sets the GNCPLCTextBox00000 zero suppress in the self screen to ON.</p> <pre>GCSNCPLCTextboxSetZeroSuppressStatus(-1, "GNCPLCTextBox00000", 1);</pre>

GCSNCPLCTextboxGetZeroSuppressStatus	Get zero suppress display status
 Syntax	<code>GCSNCPLCTextboxGetZeroSuppressStatus(nWindowNo, strName);</code>
 Argument	<ul style="list-style-type: none"> (i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	<p>Zero suppress display status</p> <ul style="list-style-type: none"> 1 : zero suppress enabled 0 : zero suppress disabled
 Details	Gets zero suppress display status.
 Example	<p>Gets the GNCPLCTextBox00000 zero suppress setting in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetZeroSuppressStatus(-1, "GNCPLCTextBox00000");</pre>

GCSNCPLCTextboxSetInterlockDevice	Set interlock device
Syntax	GCSNCPLCTextboxSetInterlockDevice(nWindowNo, strName, pszDevice) ;
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pszDevice : interlock character string
Return value	Setting result 0: Abnormal 1: Normal
Details	Sets the interlock device address to allocate to the control.
Example	Sets "R0" to GNCPLCTextBox00000 interlock device in the self screen. LONG Stat; Stat = GCSNCPLCTextboxSetInterlockDevice (-1, "GNCPLCTextBox00000", "R0") ;

GCSNCPLCTextboxGetInterlockDevice	Get interlock device
Syntax	GCSNCPLCTextboxGetInterlockDevice(nWindowNo, strName, pszDevice) ;
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) STRING pszDevice : interlock character string
Return value	Getting result 0: Abnormal 1: Normal
Details	Gets the interlock device address to allocate to the control.
Example	Gets the GNCPLCTextBox00000 interlock device in the self screen in strStat. STRING strStat; GCSNCPLCTextboxGetInterlockDevice (-1, "GNCPLCTextBox00000", strStat) ;

GCSNCPLCTextboxSetInterlockDeviceAction	Set interlock device operation						
Syntax	<code>GCSNCPLCTextboxSetInterlockDeviceAction(nWindowNo, strName, nAction);</code>						
Argument	<table> <tr> <td>(i) LONG nWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i) STRING strName</td><td>: control name</td></tr> <tr> <td>(i) LONG nAction</td><td>: interlock device operation</td></tr> </table>	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)	(i) STRING strName	: control name	(i) LONG nAction	: interlock device operation
(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)						
(i) STRING strName	: control name						
(i) LONG nAction	: interlock device operation						
Return value	Setting result 0: Abnormal 1: Normal						
Details	<p>Sets the interlock device operation. One of the following values is set for nAction.</p> <p>0: None 1: ON 2: OFF</p> <p>When a setting outside the range is made, the setting value is not changed and "0 (Abnormal)" is returned in the return value.</p>						
Example	Sets "ON" to GNCPLCTextBox00000 operation in the self screen. <code>GCSNCPLCTextboxSetInterlockDeviceAction(-1, "GNCPLCTextBox00000", 1);</code>						

GCSNCPLCTextboxGetInterlockDeviceAction	Get interlock device operation				
Syntax	<code>GCSNCPLCTextboxGetInterlockDeviceAction(nWindowNo, strName);</code>				
Argument	<table> <tr> <td>(i) LONG nWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i) STRING strName</td><td>: control name</td></tr> </table>	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)	(i) STRING strName	: control name
(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)				
(i) STRING strName	: control name				
Return value	Getting result 0: None 1: ON 2: OFF				
Details	<p>Gets the PLC textbox operation. When a value outside the range is got, the value is returned.</p>				
Example	Gets the GNCPLCTextBox00000 operation in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCPLCTextboxGetInterlockDeviceAction(-1, "GNCPLCTextBox00000");</code>				

GCSNCPLCTextboxSetInterlockDeviceBitPos	Set bit position of interlock device						
Syntax	<code>GCSNCPLCTextboxSetInterlockDeviceBitPos(nWindowNo, strName, nBitPos);</code>						
Argument	<table> <tr> <td>(i) LONG nWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i) STRING strName</td><td>: control name</td></tr> <tr> <td>(i) LONG nBitPos</td><td>: bit position of interlock device</td></tr> </table>	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)	(i) STRING strName	: control name	(i) LONG nBitPos	: bit position of interlock device
(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)						
(i) STRING strName	: control name						
(i) LONG nBitPos	: bit position of interlock device						
Return value	<p>Setting result 0: Abnormal 1: Normal</p>						
Details	<p>Sets the bit position of the interlock device. One of the following values is set for nBitPos. 0 to 15 When a setting outside the range is made, the setting value is not changed and "0 (Abnormal)" is returned in the return value.</p>						
Example	<p>Sets "1" to the bit position of GNCPLCTextBox00000 interlock device in the self screen.</p> <pre>GCSNCPLCTextboxSetInterlockDeviceBitPos(-1, "GNCPLCTextBox00000", 1);</pre>						

GCSNCPLCTextboxGetInterlockDeviceBitPos	Get bit position of interlock device				
Syntax	<code>GCSNCPLCTextboxGetInterlockDeviceBitPos(nWindowNo, strName);</code>				
Argument	<table> <tr> <td>(i) LONG nWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i) STRING strName</td><td>: control name</td></tr> </table>	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)	(i) STRING strName	: control name
(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)				
(i) STRING strName	: control name				
Return value	<p>Getting result 0 to 15</p>				
Details	<p>Gets the bit position of the PLC textbox interlock device. When a value outside the range is got, the setting value is returned.</p>				
Example	<p>Gets the bit position of GNCPLCTextBox00000 interlock device in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCPLCTextboxGetInterlockDeviceBitPos (-1, "GNCPLCTextBox00000");</pre>				

GCSNCPLCTextboxSetInterlockDeviceProjectNo	Set project number of interlock device
 Syntax	GCSNCPLCTextboxSetInterlockDeviceProjectNo (nWindowNo, strName, nProjectNo) ;
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) LONG nProjectNo : project number of interlock device
 Return value	Setting result 0: Abnormal 1: Normal
 Details	Sets the project number of the interlock device. One of the following values is set for nProjectNo. 0 to 6
 Example	Sets "1" to the project number of GNCPLCTextBox00000 interlock device in the self screen. GCSNCPLCTextboxSetInterlockDeviceProjectNo (-1, "GNCPLCTextBox00000", 1) ;
GCSNCPLCTextboxGetInterlockDeviceProjectNo	Get project number of interlock device
 Syntax	GCSNCPLCTextboxGetInterlockDeviceProjectNo (nWindowNo, strName) ;
 Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
 Return value	Getting result 0 to 6
 Details	Gets the project number of the PLC textbox interlock device. When a value outside the range is got, the setting value is returned.
 Example	Gets the project number of GNCPLCTextBox00000 interlock device in the self screen in Stat. LONG Stat; Stat = GCSNCPLCTextboxGetInterlockDeviceProjectNo (-1, "GNCPLCTextBox00000") ;

GCSNCPLCTextboxSetInterlockColor	Set background color during interlock
---	---------------------------------------

GCSNCPLCTextboxSetInterlockColor	Set background color during interlock						
Syntax	<code>GCSNCPLCTextboxSetInterlockColor(nWindowNo, strName, gcColor);</code>						
Argument	<table> <tr> <td>(i) LONG nWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i) STRING strName</td><td>: control name</td></tr> <tr> <td>(i) LONG gcColor</td><td>: color code for background color during</td></tr> </table>	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)	(i) STRING strName	: control name	(i) LONG gcColor	: color code for background color during
(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)						
(i) STRING strName	: control name						
(i) LONG gcColor	: color code for background color during						
Return value	None						
Details	<p>Sets the background color during interlock. After the background color is set, the control area is registered as a redraw area.</p>						
Example	<p>Sets the GNCPLCTextBox00000 background color during interlock in the self screen to white (0xffffffff).</p> <pre><code>GCSNCPLCTextboxSetInterlockColor(-1, "GNCPLCTextBox00000", HFFFFFFF);</code></pre>						

GCSNCPLCTextboxGetInterlockColor	Get background color during interlock
---	---------------------------------------

GCSNCPLCTextboxGetInterlockColor	Get background color during interlock				
Syntax	<code>GCSNCPLCTextboxGetInterlockColor (nWindowNo, strName);</code>				
Argument	<table> <tr> <td>(i) LONG nWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i) STRING strName</td><td>: control name</td></tr> </table>	(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)	(i) STRING strName	: control name
(i) LONG nWindowNo	: screen No. (Specify -1 for self screen.)				
(i) STRING strName	: control name				
Return value	Color code for background color during interlock				
Details	Gets the background color during interlock.				
Example	<p>Gets the GNCPLCTextBox00000 background color during interlock in the self screen in Stat.</p> <pre><code>LONG Stat; Stat = GCSNCPLCTextboxGetInterlockColor(-1, "GNCPLCTextBox00000");</code></pre>				

5.16 NCDataTextBox

GCSNCDataTextboxSetBorderID	Set 3D border resource ID
Syntax	GCSNCDataTextboxSetBorderID(nWindowNo, strName, usID);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG usID : 3D border resource ID
Return value	None
Details	Sets the 3D border resource ID. After the 3D border resource ID is set, the control area is registered as a redraw area.
Example	Sets the GNCDatTextBox00000 3D border resource ID in the self screen to 1. GCSNCDataTextboxSetBorderID(-1, "GNCDatTextBox00000", 1);

GCSNCDataTextboxGetBorderID	Set 3D border resource ID
Syntax	GCSNCDataTextboxGetBorderID(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	3D border resource ID
Details	Sets the 3D border resource ID.
Example	Gets the GNCDatTextBox00000 3D border resource ID in the self screen in Stat. LONG Stat; Stat = GCSNCDataTextboxGetBorderID(-1, "GNCDatTextBox00000");

GCSNCDatTextboxSetFontID	Set font resource ID
Syntax	<code>GCSNCDatTextboxSetFontID(nWindowNo, strName, usID);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)LONG usID : font resource ID</p>
Return value	None
Details	<p>Sets the font resource ID.</p> <p>After the font resource ID is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCDatTextBox00000 font resource ID in the self screen to 1.</p> <pre>GCSNCDatTextboxSetFontID(-1, "GNCDatTextBox00000", 1);</pre>

GCSNCDatTextboxGetFontID	Get font resource ID
Syntax	<code>GCSNCDatTextboxGetFontID(nWindowNo, strName);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p>
Return value	Font resource ID
Details	Gets the font resource ID.
Example	<p>Gets the GNCDatTextBox00000 font resource ID in the self screen in Stat.</p> <pre>Stat = GCSNCDatTextboxGetFontID(-1, "GNCDatTextBox00000");</pre>

GCSNCDatTextboxSetCaption	Set caption information
Syntax	GCSNCDatTextboxSetCaption(nWindowNo, strName, gmCaption);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)GMEM gmCaption : global memory for caption information
Return value	None
Details	Sets caption information. After the caption information is set, the control area is registered as a redraw area.
Example	Sets the GNCDatTextBox00000 caption information in the self screen as follows: Color : White (0xffffffff) Horizontal position : 0 Vertical position : 1 Left margin : 10 Right margin : 0 Top margin : 0 Bottom margin : 0 <pre>mem = GMEMCreate("TESTMEM", 14) ; GMEMSetLong(mem, 0, HFFFFF) ; GMEMSetChar(mem, 4, 0) ; GMEMSetChar(mem, 5, 1) ; GMEMSetShort(mem, 6, 10) ; GMEMSetShort(mem, 8, 0) ; GMEMSetShort(mem, 10, 0) ; GMEMSetShort(mem, 12, 0) ; GCSNCDatTextboxSetCaption(-1, "GNCDatTextBox00000", mem) ; GMEMDelete(mem);</pre>

GCSNCDatTextboxGetCaption	Get caption information
Syntax	<code>GCSNCDatTextboxGetCaption(nWindowNo, strName, gmCaption);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (o)GMEM gmCaption : global memory for caption information
Return value	Store the acquired caption information in gmCaption.
Details	Gets the caption information.
Example	<p>Gets the GNCDatTextBox00000 caption information in the self screen as follows:</p> <pre>nCol : Color nHPos : Horizontal position nVPos : Vertical position nLMgn : Left margin nRMgn : Right margin nTMgn : Top margin nBMgn : Bottom margin mem = GMEMCreate("TESTMEM", 14) ; GCSNCDatTextboxGetCaption(-1, "GNCDatTextBox00000", mem) ; nCol = GMEMGetLong(mem, 0) ; nHPos = GMEMGetChar(mem, 4) ; nHPos = GMEMGetChar(mem, 5) ; nLMgn = GMEMGetShort(mem, 6) ; nRMgn = GMEMGetShort(mem, 8) ; nTMgn = GMEMGetShort(mem, 10) ; nBMgn = GMEMGetShort(mem, 12) ; GMEMDelete(mem);</pre>

GCSNCDatTextboxSetFocusEffect	Set effect during focus
Syntax	<code>GCSNCDatTextboxSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect: 1: no effect 2: cursor display 3: select all After the effect is set, the control area is registered as a redraw area.
Example	Sets the GNCDatTextBox00000 effect during focus in the self screen to 1. <code>GCSNCDatTextboxSetFocusEffect(-1, "GNCDatTextBox00000", 1);</code>

GCSNCDatTextboxGetFocusEffect	Get effect during focus
Syntax	<code>GCSNCDatTextboxGetFocusEffect(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	1: no effect 2: cursor display 3: select all Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GNCDatTextBox00000 effect during focus in the self screen in Stat. <code>LONG Stat; Stat = GCSNCDatTextboxGetFocusEffect(-1, "GNCDatTextBox00000");</code>

GCSNCDatTextboxSetFocusColor	Set background color during focus
Syntax	<code>GCSNCDatTextboxSetFocusColor(nWindowNo, strName, gcColor);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)LONG gcColor : color code for background color during focus</p>
Return value	None
Details	<p>Sets the background color during focus.</p> <p>After the background color is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCDatTextBox00000 background color during focus in the self screen to white (0xffffffff).</p> <pre>GCSNCDatTextboxSetFocusColor(-1, "GNCDatTextBox00000", HFFFFFF);</pre>

GCSNCDatTextboxGetFocusColor	Get background color during focus
Syntax	<code>GCSNCDatTextboxGetFocusColor(nWindowNo, strName);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p>
Return value	Color code for background color during focus
Details	Gets the background color during focus.
Example	<p>Gets the GNCDatTextBox00000 background color during focus in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCDatTextboxGetFocusColor(-1, "GNCDatTextBox00000");</pre>

GCSNCDatTextboxSetNormalColor	Set normal background color
Syntax	<code>GCSNCDatTextboxSetNormalColor(nWindowNo, strName, gcColor);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)LONG gcColor : color code for normal background color</p>
Return value	None
Details	<p>Sets the normal background color.</p> <p>After the normal background color is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCDatTextBox00000 normal background color in the self screen to white (0xffffffff).</p> <pre>GCSNCDatTextboxSetNormalColor(-1, "GNCDatTextBox00000", HFFFFFF) ;</pre>

GCSNCDatTextboxGetNormalColor	Get normal background color
Syntax	<code>GCSNCDatTextboxGetNormalColor(nWindowNo, strName);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p>
Return value	Color code for normal background color
Details	Gets the normal background color.
Example	<p>Gets the GNCDatTextBox00000 normal background color in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCDatTextboxGetNormalColor(-1, "GNCDatTextBox00000") ;</pre>

GCSNCDatTextboxSetDisableColor	Set background color when disabled
Syntax	<code>GCSNCDatTextboxSetDisableColor(nWindowNo, strName, gcColor);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)LONG gcColor : color code for background color when disabled</p>
Return value	None
Details	<p>Sets the background color when disabled.</p> <p>After the background color is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCDatTextBox00000 background color when disabled in the self screen to white (0xffffffff).</p> <pre>GCSNCDatTextboxSetDisableColor(-1, "GNCDatTextBox00000", HFFFFFFF);</pre>

GCSNCDatTextboxGetDisableColor	Get background color when disabled
Syntax	<code>GCSNCDatTextboxGetDisableColor(nWindowNo, strName);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p>
Return value	Color code for background color setting when disabled
Details	Gets the background color when disabled.
Example	<p>Gets the GNCDatTextBox00000 background color when disabled in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCDatTextboxGetDisableColor(-1, "GNCDatTextBox00000");</pre>

GCSNCDatTextboxSetTextType		Set character string type
Syntax	GCSNCDatTextboxSetTextType(nWindowNo, strName, ucType);	
Argument	<ul style="list-style-type: none">(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)(i)STRING strName : control name(i)LONG ucType : character string type	
Return value	None	
Details	<p>Sets the character string type. One of the following values is set for ucType: 0: character string 1: Binary integer value 2: Signed decimal integer value 3: Unsigned decimal integer value 4: Hexadecimal integer value 5: Real number After the character string type is set, the control area is registered as a redraw area.</p>	
Example	<p>Sets the GNCDatTextBox00000 display character string type in the self screen to 1. GCSNCDatTextboxSetTextType(-1, "GNCDatTextBox00000", 1);</p>	

GCSNCDatTextboxGetTextType	Get character string type
Syntax	<code>GCSNCDatTextboxGetTextType(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: character string 1: Binary integer value 2: Signed decimal integer value 3: Unsigned decimal integer value 4: Hexadecimal integer value 5: Real number Other than above: Illegal setting
Details	Gets the display character string type.
Example	Gets the GNCDatTextBox00000 display character string type in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSNCDatTextboxGetTextType(-1, "GNCDatTextBox00000");</code>
GCSNCDatTextboxSetCommaStatus	Set comma display status
Syntax	<code>GCSNCDatTextboxSetCommaStatus(nWindowNo, strName, fStatus);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : comma display status
Return value	None
Details	Sets whether commas will be displayed for text boxes or not. One of the following values is set for fStatus: 0: normal display status 1: comma display status After the comma display status is set, the control area is registered as a redraw area.
Example	Sets the GNCDatTextBox00000 comma display status in the self screen to 1. <code>GCSNCDatTextboxSetCommaStatus(-1, "GNCDatTextBox00000", 1);</code>

GCSNCDatTextboxGetCommaStatus	Get comma display status
Syntax	<code>GCSNCDatTextboxGetCommaStatus(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: normal display status 1: comma display status
Details	Gets the setting as to whether the test box display status is normal display status or the comma display status.
Example	Gets the GNCDatTextBox00000comma display status in the self screen in Stat. LONG Stat; Stat = GCSNCDatTextboxGetCommaStatus(-1, "GNCDatTextBox00000") ;
GCSNCDatTextboxSetRefuseInputNumberStatus	Set numerical input disabled status
Syntax	<code>GCSNCDatTextboxSetRefuseInputNumberStatus(nWindowNo, strName, fStatus);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : number input status
Return value	None
Details	Sets whether numerical input will be rejected for text boxes or not. One of the following values is set for fStatus: 0: input enabled 1: input disabled
Example	Sets the GNCDatTextBox00000 numerical input disabled status in the self screen to 1. <code>GCSNCDatTextboxSetRefuseInputNumberStatus(-1, "GNCDatTextBox00000", 1) ;</code>

GCSNCDatTextboxGetRefuseInputNumberStatus	Get numerical input disabled status
---	-------------------------------------

GCSNCDatTextboxGetRefuseInputNumberStatus	Get numerical input disabled status
Syntax	<code>GCSNCDatTextboxGetRefuseInputNumberStatus(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: input enabled 1: input disabled
Details	Gets the setting as to whether numerical input will be rejected for text boxes or not.
Example	Gets the GNCDatTextBox00000 numerical input disabled status in the self screen in Stat. <code>LONG Stat; Stat = GCSNCDatTextboxGetRefuseInputNumberStatus(-1, "GNCDatTextBox00000");</code>

GCSNCDatTextboxSetRefuseInputSmallLetterStatus	Set one-byte lower case character input disabled status
--	---

GCSNCDatTextboxSetRefuseInputSmallLetterStatus	Set one-byte lower case character input disabled status
Syntax	<code>GCSNCDatTextboxSetRefuseInputSmallLetterStatus(nWindowNo, strName, fStatus);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : one-byte lower case character input
Return value	None
Details	Sets whether one-byte lower case character input will be rejected for text boxes or not. One of the following values is set for fStatus: 0: input enabled 1: input disabled Example Sets the GTextBox00000
Example	Sets the GNCDatTextBox00000 one-byte small letter input disabled status in the self screen to 1. <code>GCSNCDatTextboxSetRefuseInputSmallLetterStatus(-1, "GNCDatTextBox00000", 1);</code>

GCSNCDatTextboxGetRefuseInputSmallLetterStatus		Get one-byte lower case character input disabled status
Syntax	GCSNCDatTextboxGetRefuseInputSmallLetterStatus (nWindowNo, strName);	
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name	
Return value	0: input enabled 1: input disabled	
Details	Gets the setting as to whether one-byte lower case character input will be rejected for text boxes or not.	
Example	<p>Gets the GNCDatTextBox00000 one-byte small letter input disabled status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCDatTextboxGetRefuseInputSmallLetterStatus(-1, "GNCDatTextBox00000");</pre>	
GCSNCDatTextboxSetRefuseInputCapitalLetterStatus		Set one-byte upper case character input disabled status
Syntax	GCSNCDatTextboxSetRefuseInputCapitalLetterStatus(nWindowNo, strName, fStatus);	
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : one-byte upper case character input	
Return value	None	
Details	<p>Sets whether one-byte upper case character input will be rejected for text boxes or not.</p> <p>One of the following values is set for fStatus:</p> <p>0: input enabled 1: input disabled</p>	
Example	<p>Sets the GNCDatTextBox00000 one-byte capital letter input disabled status in the self screen to 1.</p> <pre>GCSNCDatTextboxSetRefuseInputCapitalLetterStatus(-1, "GNCDatTextBox00000", 1);</pre>	

GCSNCDatTextboxGetRefuseInputCapitalLetterStatus	Get one-byte upper case character input disabled status
 Syntax	GCSNCDatTextboxGetRefuseInputCapitalLetterStatus(nWindowNo, strName);
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
 Return value	0: input enabled 1: input disabled
 Details	Gets whether one-byte upper case character input will be rejected for text boxes or not.
 Example	Gets the GNCDatTextBox00000 one-byte capital letter input disabled status in the self screen in Stat. LONG Stat; Stat = GCSNCDatTextboxGetRefuseInputCapitalLetterStatus(-1, "GNCDatTextBox00000") ;
GCSNCDatTextboxSetRefuseInputSymbolLetterStatus	Set one-byte symbol input disabled status
 Syntax	GCSNCDatTextboxSetRefuseInputSymbolLetterStatus(nWindowNo, strName, fStatus);
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : one-byte symbol input status
 Return value	None
 Details	Sets whether one-byte symbol input will be rejected for text boxes or not. One of the following values is set for fStatus: 0: input enabled 1: input disabled
 Example	Sets the GNCDatTextBox00000 one-byte symbol letter input disabled status in the self screen to 1. GCSNCDatTextboxSetRefuseInputSymbolLetterStatus(-1, "GNCDatTextBox00000", 1) ;

GCSNCDatTextboxGetRefuseInputSymbolLetterStatus	Get one-byte symbol input disabled status
 Syntax	GCSNCDatTextboxGetRefuseInputSymbolLetterStatus(nWindowNo, strName);
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
 Return value	0: input enabled 1: input disabled
 Details	Gets whether one-byte symbol input will be rejected for text boxes or not.
 Example	Gets the GNCDatTextBox00000 one-byte symbol letter input disabled status in the self screen in Stat. LONG Stat; Stat = GCSNCDatTextboxGetRefuseInputSymbolLetterStatus(-1, "GNCDatTextBox00000");

GCSNCDatTextboxSetZeroSuppressStatus	Set zero suppress display status
 Syntax	GCSNCDatTextboxSetZeroSuppressStatus(nWindowNo, strName, fStatus);
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : zero suppress display status
 Return value	None
 Details	Sets whether to enable zero suppress display for text boxes or not. One of the following values is set for fStatus: 0: Normal display status 1: Zero suppress display status
 Example	Sets the GNCDatTextBox00000 zero suppress display status in the self screen to 1. GCSNCDatTextboxSetZeroSuppressStatus(-1, "GNCDatTextBox00000", 1);

GCSNCDataTextboxGetZeroSuppressStatus	Get zero suppress display status
 Syntax	<code>GCSNCDataTextboxGetZeroSuppressStatus(nWindowNo, strName);</code>
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
 Return value	0: Normal display status 1: Zero suppress display status
 Details	Gets whether the text box display is in normal display status or in zero suppress display status.
 Example	Gets the GNCDatTextBox00000 zero suppress display status in the self screen in Stat. <code>LONG Stat; Stat = GCSNCDataTextboxGetZeroSuppressStatus(-1, "GNCDatTextBox00000");</code>
GCSNCDataTextboxSetString	Set display character string
 Syntax	<code>GCSNCDataTextboxSetString(nWindowNo, strName, pString);</code>
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)STRING pString : display character string
 Return value	0: setting failed 1: setting succeeded
 Details	Sets the display character string. After the display character string is set, the control area is registered as a redraw area. (Note 1) By executing the display character string setting, data will be written in the NC. (Note 2) Character strings can be set even when the focus is not placed on the NC data text box.
 Example	Sets the character string "ABCD" in GNCDatTextBox00000 in the self screen. <code>GCSNCDataTextboxSetString(-1, "GNCDatTextBox00000", "ABCD");</code>

GCSNCDataTextboxGetString		Get display character string
Syntax	GCSNCDataTextboxGetString(nWindowNo, strName, pString);	
Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(o)STRING pString	: display character string
Return value	0: acquisition failed 1: acquisition succeeded	
Details	<p>Stores the display character string in pString. (Note 1) By executing "Get display character string", data will be acquired from the NC. (Note 2) When the focus is placed, the data displayed in the NC text box and the NC data may differ. In that case, NC data will be acquired.</p>	
Example	<p>Gets the GNCDATAtextBox00000 display character string in the self screen in strStat.</p> <pre>STRING strStat; GCSNCDataTextboxGetString(-1, "GNCDATAtextBox00000", strStat);</pre>	

GCSNCDataTextboxSetStringBuffer		Set input character string
 Syntax	GCSNCDataTextboxSetStringBuffer(nWindowNo, strName, ulBufferSize, pStringBuffer);	
 Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)LONG ulBufferSize	: length of input character string
	(i)STRING pStringBuffer	: input character string
 Return value	0: setting failed 1: setting succeeded	
 Details	<p>Sets input character string to the NC data text box. Enter [INPUT] to write the input character string to the NC. After the input character string is set, the control area is registered as a redraw area.</p> <p>(Note 1) If the input character string is set with the focus placed on the text box, the input character string will be displayed. If not, the displayed data will be rewritten by the function of display updating cycle.</p> <p>(Note 2) The length of input character string is limited by the property setting "Number of the maximum characters". If the input character string exceeds the limit, only the maximum number of characters from the top will be set.</p>	
 Example	<p>Set the input character string "ABCD" to GNCDatTextBox00000 in the self screen.</p> <pre>GCSNCDataTextboxSetStringBuffer(-1, "GNCDatTextBox00000", 4, "ABCD") ;</pre>	

GCSNCDataTextboxGetStringBuffer	Get input character string
Syntax	GCSNCDataTextboxGetStringBuffer(nWindowNo, strName, ulBufferSize);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (o)GMEM ulBufferSize : global memory for saving the length of input character string
Return value	Input character string
Details	Gets the value displayed in the NC data text box. When the focus is located at the text box, the data displayed in the NC data text box may differ from the one in the NC. In that case, the data displayed in the NC data text box will be acquired.
Example	Gets displayed character string in GNCDATA TextBox00000 in the self screen to strString. mem = GMEMCreate("TESTMEM", 4) ; STRING strString ; strString = GCSNCDataTextboxGetStringBuffer(-1, "GNCDATA TextBox00000", mem) ; GMEMDelete(mem);

GCSNCDatTextboxSetGNCValue		Set display value
Syntax	GCSNCDatTextboxSetGNCValue(nWindowNo, strName, gvValue);	
Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)GMEM gvValue	: global memory for setting value
Return value	0: setting failed 1: setting succeeded	
Details	<p>Sets the value displayed in a text box. Numbers are converted to character strings according to the display format. After the value displayed in a text box is set, the control area is registered as a redraw area.</p>	
Example	<pre>Sets the signed decimal integer value 100 as a value to be displayed in the GNCDatTextBox00000 in the self screen. GCSNCDatTextboxSetTextType(-1, "GNCDatTextBox00000", 2); mem = GMEMCreate("TESTMEM", 4); GMEMSetLong(mem, 0, 100); GCSNCDatTextboxSetGNCValue(-1, "GNCDatTextBox00000", mem); GMEMDelete(mem);</pre>	

GCSNCDatTextboxGetGNCValue	Get display value
Syntax	GCSNCDatTextboxGetGNCValue(nWindowNo, strName, gvValue);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (o)GMEM gvValue : global memory to store numerical value
Return value	0: acquisition failed 1: acquisition succeeded 2: variable <empty>
Details	Gets the value displayed in a text box. Character strings are converted to numbers according to the display format.
Example	Gets the numerical value being displayed in GNCDatTextBox00000 in the self screen as nVal : LONG integer value. GMEM mem; LONG nVal; mem = GMEMCreate("TESTMEM", 4) ; GCSNCDatTextboxGetGNCValue(-1, "GTextBox00000", mem) ; nVal = GMEMGetLong(mem, 0) ; GMEMDelete(mem);

GCSNCDatTextboxSetBackGroundPattern	Set background fill status	
Syntax	<code>GCSNCDatTextboxSetBackGroundPattern(nWindowNo, strName, nBackGroundPattern);</code>	
Argument	(i)LONG nWindowNo (i)STRING strName (i)LONG nBackGroundPattern	: screen No. (Specify -1 for self screen.) : control name : background fill status
Return value	None	
Details	<p>Sets the background color fill status. One of the following values is set for nBackGroundPattern: -1: no fill -2: with background fill After the background fill status is set, the control area is registered as a redraw area.</p>	
Example	<p>Sets the GNCDatTextBox00000 background fill status to -2. <code>GCSNCDatTextboxSetBackGroundPattern(-1, "GNCDatTextBox00000", -2);</code></p>	
GCSNCDatTextboxGetBackGroundPattern	Get background fill status	
Syntax	<code>GCSNCDatTextboxGetBackGroundPattern(nWindowNo, strName);</code>	
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name	
Return value	<p>Background fill status -1: no fill -2: with background fill</p>	
Details	Gets the background color fill status.	
Example	<p>Gets the GNCDatTextBox00000 background fill status in the self screen in Stat. <code>LONG Stat; Stat = GCSNCDatTextboxGetBackGroundPattern(-1, "GNCDatTextBox00000");</code></p>	

GCSNCDatTextboxSetIntegerWidth	Set integer part width
Syntax	<code>GCSNCDatTextboxSetIntegerWidth(nWindowNo, strName, ucWidth);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucWidth : The number of integer part figures
Return value	None
Details	Sets the number of integer part figures.
Example	Sets the GNCDatTextBox00000 the number of integer part figures in the self screen to 2. <code>GCSNCDatTextboxSetIntegerWidth(-1, "GNCDatTextBox00000", 2);</code>

GCSNCDatTextboxGetIntegerWidth	Get integer part width
Syntax	<code>GCSNCDatTextboxGetIntegerWidth(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	The number of integer part figures
Details	Gets the number of integer part figures.
Example	Gets the GNCDatTextBox00000 the number of integer part figures in the self screen in Stat. LONG Stat; Stat = GCSNCDatTextboxGetIntegerWidth(-1, "GNCDatTextBox00000");

GCSNCDatTextboxSetDecimalWidth	Set decimal part width
Syntax	<code>GCSNCDatTextboxSetDecimalWidth(nWindowNo, strName, ucWidth);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucWidth : The number of decimal part figures
Return value	None
Details	Sets the number of decimal part figures.
Example	<p>Sets the GNCDatTextBox00000 the number of decimal part figures in the self screen to 2.</p> <pre>GCSNCDatTextboxSetDecimalWidth(-1, "GNCDatTextBox00000", 2);</pre>

GCSNCDatTextboxGetDecimalWidth	Get decimal part width
Syntax	<code>GCSNCDatTextboxGetDecimalWidth(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	The number of decimal part figures
Details	Gets the number of decimal part figures.
Example	<p>Gets the GNCDatTextBox00000 the number of decimal part figures in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCDatTextboxGetDecimalWidth(-1, "GNCDatTextBox00000");</pre>

GCSNCDatTextboxSetScale	Set scale
Syntax	<code>GCSNCDatTextboxSetScale(nWindowNo, strName, gmScale);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)GMEM gmScale : global memory for scale
Return value	None
Details	Sets the scale.
Example	Sets the scale of GNCDatTextBox00000 in the self screen as DOUBLE real number value : 2.54. <pre>mem = GMEMCreate("TESTMEM", 8) ; GMEMSetDouble(mem, 0, 2.54) ; GCSNCDatTextboxSetScale(-1, "GNCDatTextBox00000", mem) ; GMEMDelete(mem);</pre>

GCSNCDatTextboxGetScale	Get scale
Syntax	<code>GCSNCDatTextboxGetScale(nWindowNo, strName, gmScale);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (o)GMEM gmScale : global memory to store scale
Return value	None
Details	Gets the scale.
Example	Gets the scale of GNCDatTextBox00000 in the self screen as nVal : DOUBLE real number value. <pre>GMEM mem; DOUBLE nVal; mem = GMEMCreate("TESTMEM", 8) ; GCSNCDatTextboxGetScale(-1, "GNCDatTextBox00000", mem) ; nVal = GMEMGetDouble(mem, 0) ; GMEMDelete(mem);</pre>

GCSNCDatTextboxSetOffset	Set offset
Syntax	<code>GCSNCDatTextboxSetOffset(nWindowNo, strName, IOffset);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG IOffset : offset
Return value	None
Details	Sets the offset.
Example	Sets the GNCDatTextBox00000 offset in the self screen to 100. <code>GCSNCDatTextboxSetOffset(-1, "GNCDatTextBox00000", 100);</code>

GCSNCDatTextboxGetOffset	Get offset
Syntax	<code>GCSNCDatTextboxGetOffset(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Offset
Details	Gets the offset.
Example	Gets the GNCDatTextBox00000 offset in the self screen in Stat. LONG Stat; Stat = GCSNCDatTextboxGetOffset(-1, "GNCDatTextBox00000");

GCSNCDatTextboxSetSystemNumber	Set part system number
Syntax	<code>GCSNCDatTextboxSetSystemNumber(nWindowNo, strName, ISystem);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ISystem : part system number
Return value	None
Details	<p>Sets the part system number. After the part system number is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GNCDatTextBox00000 part system number in the self screen to 1.</p> <pre>GCSNCDatTextboxSetSystemNumber(-1, "GNCDatTextBox00000", 1);</pre>

GCSNCDatTextboxGetSystemNumber	Get part system number
Syntax	<code>GCSNCDatTextboxGetSystemNumber(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Part system number
Details	Gets the part system number.
Example	<p>Gets the GNCDatTextBox00000 part system number in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCDatTextboxGetSystemNumber(-1, "GNCDatTextBox00000");</pre>

GCSNCDatTextboxSetGround	Set ground information
Syntax	<code>GCSNCDatTextboxSetGround(nWindowNo, strName, IGround);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)LONG IGround : ground information</p>
Return value	None
Details	<p>Sets the ground information.</p> <p>One of the following values is set for IGround:</p> <p>0 : Foreground</p> <p>1 : Background</p>
Example	<p>Sets the GNCDatTextBox00000 ground information in the self screen to 0 (foreground).</p> <p><code>GCSNCDatTextboxSetGround(-1, "GNCDatTextBox00000", 0);</code></p>

GCSNCDatTextboxGetGround	Get ground information
Syntax	<code>GCSNCDatTextboxGetGround(nWindowNo, strName);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p>
Return value	Ground information
Details	<p>Gets the ground information.</p> <p>0 : Foreground</p> <p>1 : Background</p>
Example	<p>Gets the GNCDatTextBox00000 ground information in the self screen in Stat.</p> <p><code>LONG Stat;</code></p> <p><code>Stat = GCSNCDatTextboxGetGround(-1, "GNCDatTextBox00000");</code></p>

GCSNCDatTextboxSetAxisInfo	Set axis information
Syntax	<code>GCSNCDatTextboxSetAxisInfo(nWindowNo, strName, ulAxis);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ulAxis : axis information
Return value	None
Details	Sets the axis information. One of the following values is set for ulAxis: 0 : No axis designation 1 to 32 : Axis number
Example	Sets the GNCDatTextBox00000 axis number in the self screen to 1. <code>GCSNCDatTextboxSetAxisInfo(-1, "GNCDatTextBox00000", 1);</code>

GCSNCDatTextboxGetAxisInfo	Get axis information
Syntax	<code>GCSNCDatTextboxGetAxisInfo(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Axis information
Details	Gets the axis information.
Example	Gets the GNCDatTextBox00000 axis information in the self screen in Stat. <code>LONG Stat; Stat = GCSNCDatTextboxGetAxisInfo(-1, "GNCDatTextBox00000");</code>

GCSNCDatTextboxSetSection	Set section No.
Syntax	GCSNCDatTextboxSetSection(nWindowNo, strName, ISection);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ISection : section No.
Return value	None
Details	Sets the section No.
Example	Sets the GNCDatTextBox00000 section No. in the self screen to 1. GCSNCDatTextboxSetSection(-1, "GNCDatTextBox00000", 1);

GCSNCDatTextboxGetSection	Get section No.
Syntax	GCSNCDatTextboxGetSection(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Section No.
Details	Gets the section No.
Example	Gets the GNCDatTextBox00000 section No. in the self screen in Stat. LONG Stat; Stat = GCSNCDatTextboxGetSection(-1, "GNCDatTextBox00000");

GCSNCDatTextboxSetSubSection	Set sub-section No.
Syntax	GCSNCDatTextboxSetSubSection(nWindowNo, strName, ISubSection);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ISubSection : sub-section No.
Return value	None
Details	Sets the sub-section No.
Example	Sets the GNCDatTextBox00000 sub-section No. in the self screen to 1. GCSNCDatTextboxSetSubSection(-1, "GNCDatTextBox00000", 1);

GCSNCDatTextboxGetSubSection	Get sub-section No.
Syntax	GCSNCDatTextboxGetSubSection(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Sub-section No.
Details	Gets the sub-section No.
Example	Gets the GNCDatTextBox00000 sub-section No. in the self screen in Stat. LONG Stat; Stat = GCSNCDatTextboxGetSubSection(-1, "GNCDatTextBox00000");

GCSNCDatTextboxSetDataType		Set data type
Syntax	GCSNCDatTextboxSetDataType(nWindowNo, strName, IDatatype);	
Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)LONG IDatatype	: data type
Return value	None	
Details	<p>Sets the data type. One of the following values is set for IDatatype:</p> <ul style="list-style-type: none"> 0x1 : 1-byte integer type 0x2 : 2-byte integer type 0x3 : 4-byte integer type 0x5 : 8-byte real type 0x10: Character string type 	
Example	<p>Sets the GNCDatTextBox00000 data type in the screen No. to 1.</p> <pre>GCSNCDatTextboxSetDataType(-1, "GNCDatTextBox00000", 1);</pre>	
GCSNCDatTextboxGetDataType		Get data type
Syntax	GCSNCDatTextboxGetDataType(nWindowNo, strName);	
Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
Return value	<ul style="list-style-type: none"> 0x1 : 1-byte integer type 0x2 : 2-byte integer type 0x3 : 4-byte integer type 0x5 : 8-byte real type 0x10: Character string type Other than above: Illegal setting 	
Details	Gets the data type.	
Example	<p>Gets the GNCDatTextBox00000 data type in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSNCDatTextboxGetDataType(-1, "GNCDatTextBox00000");</pre>	

5.17 Menu

GCSMenuRefresh	Redraw menu
Syntax	GCSMenuRefresh(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	None
Details	Redraws the menu button.
Example	Redraws GNXMenu00000 in the self screen. GCSMenuRefresh(-1, "GNXMenu00000");

GCSMenuSetRefreshValidFlag	Set menu display
Syntax	GCSMenuSetRefreshValidFlag(nWindowNo, strName, nRefreshValidFlag);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT nRefreshValidFlag : display valid flag
Return value	None
Details	Sets whether to enable or disable the menu display. One of the following values is set for nRefreshValidFlag: 1: Menu display enabled 0: Menu display disabled When the menu display is changed from disabled to enabled, always execute GCSMenuRefresh().
Example	Sets the GNXMenu00000 menu display in the self screen to enabled and redraws the menu. GCSMenuSetRefreshValidFlag(-1, "GNXMenu00000", 1); GCSMenuRefresh(-1, "GNXMenu00000");

GCSMenuSetMenuButtonName_all	Set character string on one-row menu (10 menus)
 Syntax	<code>GCSMenuSetMenuButtonName_all(nWindowNo, strName, nMenuGroupID, strData);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)STRING strData : character string to be set
 Return value	Setting result
 Details	<p>Sets the character strings (names) for all the menu buttons (10 buttons) of one-row menu.</p> <p>Up to seven characters can be displayed in 1 row for the menu name. Put the line break code between the rows to make two rows.</p>
 Example	<p>Sets the names as shown below for the GNXMenu00000 menu buttons in the self screen.</p> <p>1st menu : "MENU1" 2nd menu : "MENU2" 3rd menu : "MENU3" 4th menu : "MENU4" 5th menu : "MENU5" 6th menu : "MENU6" 7th menu : "MENU7" 8th menu : "MENU8" 9th menu : "MENU9" 10th menu : (empty)</p> <pre>GCSMenuSetMenuButtonName_all(-1, "GNXMenu00000", 1, "MENU1,MENU2,MENU3,MENU4,MENU5,MENU6,MENU7,MEN U8,MENU9, ");</pre>

GCSMenuSetMenuButtonUpperName_all	Set character string on upper row of two-row menu (10 menus)
Syntax	<code>GCSMenuSetMenuButtonUpperName_all(nWindowNo, strName, nMenuGroupID, strData);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)STRING strData : character string to be set
Return value	Setting result
Details	Sets the character strings (names) for all the menu buttons (10 buttons) of the upper row of two-row menu. Up to seven characters can be displayed in 1 row for the menu name.
Example	Sets the names as shown below for the GNXMenu00000 upper row menu buttons in the self screen. <pre> 1st menu : "MENU1" 2nd menu : "MENU2" 3rd menu : "MENU3" 4th menu : "MENU4" 5th menu : "MENU5" 6th menu : "MENU6" 7th menu : "MENU7" 8th menu : "MENU8" 9th menu : "MENU9" 10th menu : (empty) GCSMenuSetMenuButtonUpperName_all(-1, "GNXMenu00000", 1, "MENU1,MENU2,MENU3,MENU4,MENU5,MENU6,MENU7,MEN U8,MENU9, "); </pre>

GCSMenuSetMenuItemName_all	Set character string on lower row of two-row menu (10 menus)
Syntax	GCSMenuSetMenuItemName_all(nWindowNo, strName, nMenuGroupID, strData);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)STRING strData : character string to be set
Return value	Setting result
Details	Sets the character strings (names) for all the menu buttons (10 buttons) of the lower row of two-row menu. Seven characters maximum can be displayed on a row for the menu name. Put the line break code between the rows when two rows.
Example	Sets the names as shown below for the GNXMenu00000 lower row menu buttons in the self screen. 1st menu : "MENU1" 2nd menu : "MENU2" 3rd menu : "MENU3" 4th menu : "MENU4" 5th menu : "MENU5" 6th menu : "MENU6" 7th menu : "MENU7" 8th menu : "MENU8" 9th menu : "MENU9" 10th menu : (empty) <pre>GCSMenuSetMenuItemName_all(-1, "GNXMenu00000", 1, "MENU1,MENU2,MENU3,MENU4,MENU5,MENU6,MENU7,MEN U8,MENU9, ") ;</pre>

GCSMenuSetMenuButtonName_one	Set character string on one-row menu (one menu)
 Syntax	<code>GCSMenuSetMenuButtonName_one(nWindowNo, strName, nMenuGroupID, nMenuNo, strData);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No. (i)STRING strData : character string to be set
 Return value	Setting result
 Details	<p>Sets the character string (name) for the specified menu button (one button) of one-row menu.</p> <p>Seven characters maximum can be displayed on a row for the menu name. Put the line break code between the lows when two rows.</p>
 Example	<p>Sets the character strings at and subsequent to nOffset in the character string table for the GNXMenu00000 1st to 9th menu buttons in the self screen</p> <pre> SHORT nOffset ; 'Offset (0-) from the beginning of the character string table SHORT nMenuLoop ; STRING strMenu ; nOffset = 1 ; nMenuLoop = 1 ; FOR (9) GCSResourceLoadString((nOffset + nMenuLoop), strMenu) ; GCSMenuSetMenuButtonName_one(-1, "GNXMenu00000", 1, nMenuLoop, strMenu) ; nMenuLoop = nMenuLoop + 1 ; NEXT </pre>

GCSMenuSetMenuItemName_one	Set character string on upper row of two-row menu (one menu)
Syntax	GCSMenuSetMenuItemName_one(nWindowNo, strName, nMenuGroupID, nMenuNo, strData);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No. (i)STRING strData : character string to be set
Return value	Setting result
Details	Sets the character string (name) for the specified menu button (one button) of the upper row of two-row menu. Up to seven characters can be displayed in 1 row for the menu name.
Example	<p>Sets the character strings at and subsequent to nOffset in the character string table for the GNXMenu00000 1st to 9th menu buttons in the self screen</p> <pre> SHORT nOffset ; 'Offset (0-) from the beginning of the character string table SHORT nMenuLoop ; STRING strMenu ; nOffset = 1 ; nMenuLoop = 1 ; FOR (9) GCSResourceLoadString((nOffset + nMenuLoop), strMenu) ; GCSMenuSetMenuItemName_one(-1, "GNXMenu00000", 1, nMenuLoop, strMenu) ; nMenuLoop = nMenuLoop + 1 ; NEXT </pre>

GCSMenuSetMenuItemName_one	Set character string on lower row of two-row menu (one menu)
Syntax	GCSMenuSetMenuItemName_one(nWindowNo, strName, nMenuGroupID, nMenuNo, strData);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No. (i)STRING strData : character string to be set
Return value	Setting result
Details	Sets the character string (name) for the specified menu button (one button) of the lower row of two-row menu. Seven characters maximum can be displayed on a row for the menu name. Put the line break code between the rows when two rows.
Example	<p>Sets the character strings at and subsequent to nOffset in the character string table for the GNXMenu00000 1st to 9th menu buttons in the self screen</p> <pre> SHORT nOffset ; 'Offset (0-) from the beginning of the character string table SHORT nMenuLoop ; STRING strMenu ; nOffset = 1 ; nMenuLoop = 1 ; FOR (9) GCSResourceLoadString((nOffset + nMenuLoop), strMenu) ; GCSMenuSetMenuItemName_one(-1, "GNXMenu00000", 1, nMenuLoop, strMenu) ; nMenuLoop = nMenuLoop + 1 ; NEXT </pre>

GCSMenuSetMenuButtonState_one	Set state of one-row menu (one menu)
Syntax	<pre>GCSMenuSetMenuButtonState_one(nWindowNo, strName, nMenuGroupID, nMenuNo, nMenuState);</pre>
Argument	<ul style="list-style-type: none">(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)(i)STRING strName : control name(i)LONG nMenuGroupID : menu group ID (fixed to 1)(i)SHORT nMenuNo : menu No.(i)LONG nMenuState : menu selection status
Return value	Setting result
Details	<p>Sets the selection state for the specified one-row menu button (one button).</p> <p>One of the following values is set for nMenuState:</p> <ul style="list-style-type: none">0: Menu button OFF (not selected, normal)1: Menu button ON (selected)-1: Menu button disabled
Example	<p>Sets the menu selection status to ON for the GNXMenu00000 1st menu button in the self screen.</p> <pre>GCSMenuSetMenuButtonState_one(-1, "GNXMenu00000", 1, 1, 1);</pre>

GCSMenuSetMenuButtonUpperState_one	Set state of upper row of two-row menu (one menu)
Syntax	<code>GCSMenuSetMenuButtonUpperState_one(nWindowNo, strName, nMenuGroupID, nMenuNo, nMenuState);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No. (i)LONG nMenuState : menu selection status
Return value	Setting result
Details	Sets the selection state for the upper row of the specified two-row menu button (one button). One of the following values is set for nMenuState: 0: Menu button OFF (not selected, normal) 1: Menu button ON (selected) -1: Menu button disabled
Example	Sets the menu selection status to ON for the upper row of the GNXMenu00000 1st menu button in the self screen. <code>GCSMenuSetMenuButtonUpperState_one(-1, "GNXMenu00000", 1, 1, 1);</code>

GCSMenuSetMenuButtonLowerState_one		Set state of lower row of two-row menu (one menu)
Syntax	GCSMenuSetMenuButtonLowerState_one(nWindowNo, strName, nMenuGroupID, nMenuNo, nMenuState);	
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No. (i)LONG nMenuState : menu selection status	
Return value	Setting result	
Details	Sets the selection state for the lower row of the specified two-row menu button (one button). One of the following values is set for nMenuState: 0: Menu button OFF (not selected, normal) 1: Menu button ON (selected) -1: Menu button disabled	
Example	Sets the menu selection status to ON for the lower row of the GNXMenu00000 1st menu button in the self screen. GCSMenuSetMenuButtonLowerState_one(-1, "GNXMenu00000", 1, 1, 1);	

GCSMenuGetMenuItemState_one	Get state of one-row menu (one menu)
 Syntax	<code>GCSMenuGetMenuItemState_one(nWindowNo, strName, nMenuGroupID, nMenuNo);</code>
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No.
 Return value	0: Menu button OFF (not selected, normal) 1: Menu button ON (selected) -1: Menu button disabled
 Details	Gets the selection state for the specified one-row menu button (one button).
 Example	Gets the menu selection status of the GNXMenu00000 1st menu button in the self screen. <pre>LONG Stat; Stat = GCSMenuSetMenuItemState_one(-1, "GNXMenu00000", 1, 1);</pre>

GCSMenuGetMenuItemUpperState_one	Get state of upper row of two-row menu (one menu)
 Syntax	<code>GCSMenuGetMenuItemUpperState_one(nWindowNo, strName, nMenuGroupID, nMenuNo);</code>
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No.
 Return value	0: Menu button OFF (not selected, normal) 1: Menu button ON (selected) -1: Menu button disabled
 Details	Gets the selection state for the upper row of the specified two-row menu button (one button).
 Example	Gets the menu selection status of the upper row of the GNXMenu00000 1st menu button in the self screen. <pre>LONG Stat; Stat = GCSMenuGetMenuItemUpperState_one(-1, "GNXMenu00000", 1, 1);</pre>

GCSMenuGetMenuItemLowerState_one	Get state of lower row of two-row menu (one menu)
Syntax	<code>GCSMenuGetMenuItemLowerState_one(nWindowNo, strName, nMenuGroupID, nMenuNo);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No.
Return value	0: Menu button OFF (not selected, normal) 1: Menu button ON (selected) -1: Menu button disabled
Details	Gets the selection state for the lower row of the specified two-row menu button (one button).
Example	Gets the menu selection status of the lower row of the GNXMenu00000 1st menu button in the self screen. LONG Stat; Stat = GCSMenuGetMenuItemLowerState_one(-1, "GNXMenu00000", 1, 1);

GCSMenuSetMenuItemOffIcon_one	Set icon of one-row menu (menu) at OFF
Syntax	<code>GCSMenuSetMenuItemOffIcon_one(nWindowNo, strName, nMenuGroupID, nMenuNo, nlconID);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nMenuGroupID : menu group ID (fixed to 1) (i)SHORT nMenuNo : menu No. (i)SHORT nlconID : icon resource ID at the time of OFF
Return value	Setting result
Details	Sets the icon resource ID at the time of OFF for the specified one-row menu button (one button).
Example	Set the first icon resource ID at the time of OFF for the GNXMenu00000 1st menu button in the self screen. LONG Stat; Stat = GCSMenuSetMenuItemOffIcon_one(-1, "GNXMenu00000", 1, 1, 1);

GCSMenuSetMenuItemIcon_one	Set icon of one-row menu (menu) at ON
Syntax	<code>GCSMenuSetMenuItemIcon_one(nWindowNo, strName, nMenuGroupID, nMenuNo, nlconID);</code>
Argument	<ul style="list-style-type: none">(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)(i)STRING strName : control name(i)LONG nMenuGroupID : menu group ID (fixed to 1)(i)SHORT nMenuNo : menu No.(i)SHORT nlconID : icon resource ID at the time of ON
Return value	Setting result
Details	Sets the icon resource ID at the time of ON for the specified one-row menu button (one button).
Example	<pre>Set the first icon resource ID at the time of ON for the GNXMenu00000 1st menu button in the self screen. LONG Stat; Stat = GCSMenuSetMenuItemIcon_one(-1, "GNXMenu00000", 1, 1, 1);</pre>

GCSMenuSendProcessID	Issue process ID
Syntax	GCSMenuSendProcessID(nWindowNo, strName, nProcessID);
Argument	(i)LONG nWindowNo : screen No. (i)STRING strName : control name (i)LONG nProcessID : process ID
Return value	Setting result
Details	Issues process ID to the panel One of the following values is set for nWindowNo. 1000: Monitor screen 2000: Setup screen 3000: Edit screen One of the following values is set for nProcessID: 0: Close custom window 1: Display Monitor screen 2: Display Setup screen 3: Display Edit screen 4: Display Diagnosis screen 5: Display Maintenance screen 6: Display SFP screen 7: Display F0 screen 8: Display the screen for window display 9: Display the screen for window selection 10: Display menu list 11: Switch part system 12: Display parameter/operation guidance 13: Cancel direct screen selection
Example	Closes the custom window registered to menu customization. LONG Stat; Stat = GCSMenuSendProcessID(1000, 0, 0);

GCSMenuChangeMenuType	Switch display between one-row menu and two-row menu
Syntax	<code>GCSMenuChangeMenuType (nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Setting result
Details	Switches the display between the one-row menu and the two-row menu. Switching can be executed between the following menu types. - One-row menu (VGA) (Classic) <--> Two-row menu (VGA) (Classic) - One-row menu (XGA) (Classic) <--> Two-row menu (XGA) (Classic) - One-row menu (VGA) <--> Two-row menu (VGA) - One-row menu (XGA) <--> Two-row menu (XGA)
Example	Switches the display of the GNXMenu00000 menu on self screen between the one-row menu and the two-row menu. <code>LONG Stat;</code> <code>Stat = GCSMenuChangeMenuType(-1, "GNXMenu00000");</code>

GCSMenuSetDstObject()	Specify called control
Syntax	<code>GCSMenuSetDstObject (nWindowNo, strName, strDstName);</code>
Argument	(i) LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i) STRING strName : Control name (i) STRING strDstName : Called control name
Return value	Setting result
Details	Specify the called control. (Note) After the specified called control is called, the called control will be focused.
Example	<p>Specify GBASICCONTROL00005 in the self screen as the called control in GNXMENU00000 in the self screen.</p> <pre>LONG nStatus = 0; nStatus = GCSSetDstObject (-1, "GNXMENU00000","GBASICCONTROL00005");</pre> <p>OnKeyPress of BasicControl is called by using the key code of the menu return button as the argument when the menu return button for the menu part is pressed.</p> <pre>\$GBasicControl00005-OnKeyPress : if(LLPARAM == 122) ' Menu return button ' Process when the menu return button is pressed : endif; \$End</pre>

GCSMenuSetNextMenuButtonState	Set menu switching button selection state
 Syntax	<code>GCSMenuSetNextMenuButtonState(nWindowNo, strName, nButtonState, IType)</code>
 Argument	<p>(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)</p> <p>(i)STRING strName : Control name</p> <p>(i)LONG nButtonState : A button selection state</p> <p>(i)LONG IType : Type bit12: Specifies whether to update drawing. ON: Does not update drawing. OFF: Updates drawing.</p>
 Return value	Setting result
 Details	<p>Sets the selection state for the menu switching button.</p> <p>Set any of the following values for nButtonState.</p> <p>0: Button OFF (Not selected, default)</p> <p>-1: Button enabled</p>
 Example	<p>Sets the button selection state to normal for the menu switching button of GNXMenu00000 on self screen.</p> <p><code>GCSMenuSetNextMenuButtonState(-1, "GNXMenu00000", 0, 0);</code></p>

GCSMenuSetOpeMessage	Set operation message
 Syntax	<code>GCSMenuSetOpeMessage(nWindowNo, strName, strOpeMessageString)</code>
 Argument	<p>(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)</p> <p>(i)STRING strName : Control name</p> <p>(i)STRING strOpeMessageString : Operation message</p>
 Return value	Setting result
 Details	<p>Sets operation messages using character strings.</p> <p>Up to 40 characters can be used for an operation message.</p>
 Example	<p>Sets the operation message part of GNXMenu00000 to the "Message1" character string on self screen.</p> <p><code>GCSMenuSetOpeMessage(-1, "GNXMenu00000", "Message1");</code></p>

GCSMenuBeginAnimState		Start menu animated motion setting
 Syntax	GCSMenuBeginAnimState(nWindowNo, strName, nMenuAnimType)	
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nMenuAnimType : Type of menu animation 0: No animation 1: Rightward sliding 2: Upward sliding 3: Downward sliding	
 Return value	0: Normal end	
 Details	<p>Starts the setting for animated motion.</p> <p>After the start setting for animated motion has been completed, set the updating function for the menu to be displayed by animation (setting of name, normal/highlighted/hidden display, icons, etc.).</p> <p>After the GCSMenuEndAnimState() setting has been completed, animated motion starts.</p> <p>Set any of the following values for nMenuAnimType.</p> <ul style="list-style-type: none"> 0: No animation 1: Rightward sliding 2: Upward sliding 3: Downward sliding <p>(Note) If the operation parameter (#8976 Menu animation disabled) is enabled, menu animation is not executed.</p>	
 Example	Executes menu animation after the GNXMenu00000 menu name on self screen is changed.	
<pre> GCSMenuBeginAnimState(-1, "GNXMenu00000", 1); // Starting the menu state change GCSMenuSetMenuBarUpperName_all(-1, "GNXMenu00000", 1,"MENU1,MENU2,MENU3,MENU4,MENU5,MENU6,MENU7,ME NU8,MENU9,"); // Setting menu names GCSMenuEndAnimState(-1, "GNXMenu00000"); // Completing the menu state change and starting rightward animation 4.3.23 </pre>		

GCSMenuEndAnimState	Complete menu animated motion setting
Syntax	GCSMenuEndAnimState(nWindowNo, strName)
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	0: Normal end
Details	Sets the completion for animated motion setting. Set the updating function for the menu to be displayed by animation (setting of name, normal/highlighted/hidden display, icons, etc.). Calling the this function starts animated motion.
(Note) If the control parameter (#8976 Menu Anim Invalid) is enabled, menu animation is not executed.	
Example	Executes menu animation after the GNXMenu00000 menu name on self screen is changed.
<pre>GCSMenuBeginAnimState(-1, "GNXMenu00000", 1); // Starting the menu state change GCSMenuSetMenuButtonUpperName_all(-1, "GNXMenu00000", 1,"MENU1,MENU2,MENU3,MENU4,MENU5,MENU6,MENU7,ME NU8,MENU9, "); // Setting menu names GCSMenuEndAnimState(-1, "GNXMenu00000"); // Completing the menu state change and starting rightward animation</pre>	

GCSMenuStopAnim	Stop menu animation
Syntax	GCSMenuStopAnim(nWindowNo, strName)
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	0: Normal end
Details	<p>Stops menu animation and displays the menu after the state has been changed.</p> <p>Use this function to stop menu animation that is running using GCSMenuEndAnimState().</p> <p>If you call this function when menu animation is not executed, the stop process is not executed and the program ends normally.</p>
Example	<p>Stops the animation of GNXMenu00000 on self screen, and sets the operation message part to the "Message1" character string.</p> <pre>GCSMenuStopAnim(-1, "GNXMenu00000"); // Stopping menu animation GCSMenuSetOpeMessage(-1, "GNXMenu00000", "Message1"); // Setting the "Message1" character string</pre>

5.18 FileInOut

GCSIOCheckUpDateFile	Check existence of file
Syntax	GCSIOCheckUpDateFile(nWindowNo, strName, strFileInfo);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)STRING strFileInfo : file path to be checked (up to 128 characters in the path)
Return value	TRUE :The file exists FALSE :The file does not exist
Details	Checks if the specified file exists.
Example	Checks if the common variable file " COMMON.VAR " exists in the "COMMON" directory of "Drive D" using GNXFileInOut00000 in the self screen. LONG Stat; Stat = GCSIOCheckUpDateFile(-1, "GNXFileInOut00000", "D:/COMMON/COMMON.VAR");

GCSIOFileTransfer	Start file transfer	
Syntax	GCSIOFileTransfer(nWindowNo, strName, strInFileInfo, strOutFileInfo);	
Argument	(i)LONG nWindowNo	: Screen No. (Specify -1 for self screen.)
	(i)STRING strName	: Control name
	(i)STRING strInFileInfo	: Source file path (up to 128 characters in the path)
	(i)STRING strOutFileInfo	: Destination file path (up to 128 characters in the path)
Return value	Error code	
	0 : Normal completion	
	1 : Unable to open the transfer source file	
	2 : Unable to open the transfer destination file	
	5 : Unable to read the transfer source file	
	8 : Unable to write to the transfer destination file	
	22: Specified file does not exist	
	24: Memory capacity over	
	31: Specified file is in automatic operation	
	32: Specified file is in program check	
	33: Specified file is in program restart	
	34: An illegal character is included in Argument	
	35: Unable to transfer without password input	
	37: The same file is specified for the transfer source and destination	
	39: Excessive number of programs is registered	
	60: File name length is longer than the maximum	
	61: Directory is specified for transfer source file name (Note)	
	63: FLD drive is not connected	
	66: The number of files registered is excessive	
	67: Edit lock B is active	
	68: Edit lock C is active	
	70: Data serve is not connected (M800V/M80V/M800/M80 (Windows-based display unit) and M700VW)	
	71: In PLC RUN	
	72: Data protect is active	
	74: Memory card is not connected	
	84: Write protect is active on the specified device	
	86: Specified path is incorrect	
	87: In transferring	
	88: The file to transfer is not specified	
Details	Inputs and outputs NC data between NC memory/NC memory 2 and an external device.	
Example	Transfers the common variable file "COMMON.VAR" in the "COMMON" directory of "Drive D" using GNXFileInOut00000 in the self screen. LONG Stat; Stat = GCSIOFileTransfer(-1, "GNXFileInOut00000", "D:/COMMON/COMMON.VAR", "M01:/DAT/COMMON.VAR");	

(Note) A full path has to be used to specify the file name in the file information to be given to the argument. However, an error does not occur even when a file name is omitted from the transfer destination file information (the device and directory have to be specified). If the file name is omitted, transfer is performed with the transfer source file name.

GCSIODDeleteFile	Delete file/directory
Syntax	GCSIODDeleteFile(nWindowNo, strName, strFileInfo);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)STRING strFileInfo : file path to be deleted (up to 128 characters in the path)
Return value	Error code 0: Normal completion 15: Unable to delete the specified file (directory) 22: Specified file does not exist 31: Specified file is in automatic operation 32: Specified file is in program check 33: Specified file is in program restart 34: An illegal character is included in Argument 57: A file exists in the directory 63: FLD drive is not connected 67: Edit lock B is active 68: Edit lock C is active 70: Data server is not connected (M800V/M80V/M800/M80 (Windows-based display unit) and M700VW) 72: Data protect is active 74: Memory card is not connected 84: Write protect is active on the specified device 86: Specified path is incorrect
Details	Deletes the specified file (directory).
Example	Deletes the common variable file "COMMON.VAR" from the "COMMON" directory of "Drive D" using GNXFileInOut00000 in the self screen. LONG Stat; Stat = GCSIODDeleteFile(-1, "GNXFileInOut00000", "D:/COMMON/COMMON.VAR");

GCSIOCreateDirectory		Create directory
 Syntax	GCSIOCreateDirectory(nWindowNo, strName, strDirInfo);	
 Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)STRING strDirInfo	: path of directory to be created (up to 128 characters in the path)
 Return value	Error code 0: Normal completion 18: Unable to create directory 21: Unable to create directory on this device 34: An illegal character is included in Argument 39: Excessive number of programs is registered 63: FLD drive is not connected 66: The number of files registered is excessive 70: Data server is not connected (M800V/M80V/M800/M80 (Windows-based display unit) and M700VW) 74: Memory card is not connected 84: Write protect is active on the specified device 85: Specified directory already exists 86: Specified path is incorrect	
 Details	Creates the specified directory.	
 Example	Creates the "TEST" directory on "Drive D" using GNXFileInOut00000 in the self screen. LONG Stat; Stat = GCSIOCreateDirectory(-1, "GNXFileInOut00000", "D:/TEST");	

GCSIORenameFile	Rename file/directory	
Syntax	GCSIORenameFile(nWindowNo, strName, strOldFileName, strNewFileName);	
Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)STRING strOldFileName	: file path before change (up to 128 characters in the path)
	(i)STRING strNewFileName	: file path after change (up to 128 characters in the path)
Return value	Error code 0 : Normal completion 16: Unable to rename the selected file 29: Different device has been specified 31: Specified file is in automatic operation 32: Specified file is in program check 33: Specified file is in program restart 34: An illegal character is included in Argument 37: The same file name is specified for the names before and after rename 60: File name length is longer than the maximum 63: FLD drive is not connected 67: Edit lock B is active 68: Edit lock C is active 70: Data server is not connected (M800V/M80V/M800/M80 (Windows-based display unit) and M700VW) 72: Data protect is active 74: Memory card is not connected 84: Write protect is active on the specified device 86: Specified path is incorrect.	
Details	Changes the file (directory) name to the specified one.	
Example	Changes the "COMMON" directory of "Drive D" to "TEST" using GNXFileInOut00000 in the self screen. LONG Stat; Stat = GCSIOCreateDirectory(-1, "GNXFileInOut00000", "D:/COMMON", "D:/TEST");	

GCSIInterrupt	Interrupt file transfer
Syntax	<code>GCSIInterrupt(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Error code 0 : Normal completion
Details	Interrupts the file transfer that is being carried out.
Example	Interrupts the file transfer of GNXFileInOut00000 in the self screen. <code>LONG Stat;</code> <code>Stat = GCSIInterrupt(-1, "GNXFileInOut00000");</code>

GCSIOInitializeMessage	Initialize file input/output part
Syntax	<code>GCSIOInitializeMessage(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	None
Details	Initializes the drawing of message and bar graph.
Example	Initializes the message and bar graph displayed using GNXFileInOut00000 in the self screen. <code>GCSIOInitializeMessage(-1, "GNXFileInOut00000");</code>

GCSGetLastError	Get error information
Syntax	<code>GCSGetLastError(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Error code 0: Normal completion 1: Unable to open the transfer source file 2: Unable to open the transfer destination file 5: Unable to read the transfer source file 8: Unable to write to the transfer destination file 15: Unable to delete the specified file (directory) 16: Unable to rename the selected file 18: Unable to create directory 21: Unable to create directory on this device 22: Specified file does not exist 24: Memory capacity over 29: Different device has been specified 31: Specified file is in automatic operation 32: Specified file is in program check 33: Specified file is in program restart 34: An illegal character is included in Argument 35: Unable to transfer without password input 37: The same file is specified for the transfer source and destination 39: Excessive number of programs is registered 57: A file exists in the directory 60: The file name length is longer than the maximum 61: Directory is specified for transfer source file name 63: FLD drive is not connected 66: The number of files registered is excessive 67: Edit lock B is active 68: Edit lock C is active 70: Data server is not connected (M800V/M80V/M800/M80 (Windows-based display unit) and M700VW) 71: In PLC RUN 72: Data protect is active 74: Memory card is not connected 79: Serial number is incorrect 84: Write protect is active on the specified device 85: The directory already exists 86: Specified path is incorrect 87: In transferring 88: The file to transfer is not specified
Details	Gets the information of currently occurring errors, including the error that occurs during file transfer.
Example	Gets the information of the errors that occur during file transfer of GNXFileInOut00000 in the self screen. <code>LONG Stat;</code> <code>Stat = GCSGetLastError(-1, "GNXFileInOut00000");</code>

GCSIOGetTransferStatus	Get transfer status
Syntax	<code>GCSIOGetTransferStatus(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Transfer status 0:No status 1:Being transferred 2:Transfer completed 3:In Error
Details	Gets the file transfer status.
Example	Gets the file transfer status of GNXFileInOut00000 in the self screen. <code>LONG Stat;</code> <code>Stat = GCSIOGetTransferStatus(-1, "GNXFileInOut00000");</code>

5.19 AlarmMessage

<code>GCSAlarmMessageSetDispMessageType</code>	Set character string display form
Syntax	<code>GCSAlarmMessageSetDispMessageType(nWindowNo, strName, ucDispType);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucDispType : character string display form
Return value	None
Details	Sets the property "Character string display form" to change the type to display character string. One of the following values is set for ucSystemNumber: 0: When the message is split, the residual message is not displayed at the next drawing update. 1: When the message is split, the residual message is displayed at the next drawing update. 2: A character string is displayed according to the setting of the parameter (#11021 PLC mesg disp type).
Example	Sets GNXAlarmMessage00000 in the self screen so that if a message is split, the residual message is not displayed at the next drawing update. <code>GCSAlarmMessageSetDispMessageType(-1, "GNXAlarmMessage00000", 0);</code>

5.20 MonitorStatus

GCSMonStatusSetDispSysNumber	Set part system number to display
 Syntax	<code>GCSMonStatusSetDispSysNumber(nWindowNo, strName, ucSystemNumber);</code>
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucSystemNumber : part system number to display (0 to 8)
 Return value	TRUE :setting succeeded FALSE :setting failed
 Details	Sets the property "Part system designation" to change the part system to display. However, if "0" is given to the argument, the number of part systems to be displayed is the same as that of the valid part systems (the number of part systems to be displayed varies according to the part size).
 Example	Changes the part system displayed with GNXMonitorStatus00000 in the self screen to the part system number 2. <code>LONG Stat;</code> <code>Stat = GCSMonStatusSetDispSysNumber(-1, "GNXMonitorStatus00000", 2);</code>

GCSMonStatusGetDispSysNumber	Get part system number to display
 Syntax	<code>GCSMonStatusGetDispSysNumber(nWindowNo, strName);</code>
 Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
 Return value	The part system number being displayed (0 to 8)
 Details	Gets the value of the property "NumberOfSystems".
 Example	Gets the part system displayed with GNXMonitorStatus00000 in the self screen in MonStat. <code>LONG MonStat;</code> <code>MonStat = GCSMonStatusGetDispSysNumber(-1, "GNXMonitorStatus00000");</code>

5.21 Counter

GCSCounterAxisChange	Change axis to be displayed
Syntax	GCSCounterAxisChange(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: Error 1: Normal completion
Details	Changes the axis to be displayed when the number of control axes has exceeded the maximum number of lines for display. After the axis is set, the control area is registered as a redraw area.
Example	Changes the axis to be displayed on GNXCounter00000 in the self screen. LONG IStatus; IStatus = GCSCounterAxisChange(-1, "GNXCounter00000");

GCSCounterSetCounterType	Set counter type
Syntax	GCSCounterSetCounterType(nWindowNo, strName, ICounterType);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ICounterType : counter type
Return value	0: Error 1: Normal completion
Details	Sets the counter type. Sets ICounterType to one of the following values. 0: Current position 1: Workpiece coordinate position 2: Machine's position 3: Program position 7: Remaining command 8: Manual interruption amount 9: Next command 10: Restart position 11: Restart remain distance 15: Tip workpiece coordinate position 17: Tool axis movement 18: Tip machining position 19: Relative position 20: Table coordinate position 21: Work installation position 22: Inclined surface coordinate position 26: PLC axis position After the counter type is set, the control area is registered as a redraw area.
Example	Sets the GNXCounter00000 counter type in the self screen to 1. LONG IStatus; IStatus = GCSCounterSetCounterType(-1, "GNXCounter00000", 1);

5.22 CycleTime

GCSCycleTimeSetTimeType	Set type of time to be displayed
Syntax	GCSCycleTimeSetTimeType(nWindowNo, strName, lArea, lTimeType);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG lArea : display position (0: upper / 1: lower) (i)LONG lTimeType : type of time
Return value	0: Error 1: Normal completion
Details	Sets the type of time to be displayed. Sets lTimeType to one of the following values. 0: Default (upper: automatic start / lower: cycle time) 1: Date 2: Time 3: Power-ON time 4: Automatic operation time 5: Automatic start time 6: External accumulated time 1 7: External accumulated time 2 8: Cycle time 9: Cut time After the time type is set, the control area is registered as a redraw area.
Example	Sets the GNXCycleTime00000 time type (upper) in the self screen to 1. <pre>LONG lStatus; lStatus = GCSCycleTimeSetTimeType(-1, "GNXCycleTime00000", 0, 1);</pre>

5.23 LoadMeter

<code>GCSLoadMeterSetDispType</code>	Set display type of load meter
Syntax	<code>GCSLoadMeterSetDispType(nWindowNo, strName, IDispType);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG IDispType : display type
Return value	None
Details	Sets the display type. Sets IDispType to one of the following values. 0 : Display spindle load (Load meter 1) only (upper) 1 : Display Z axis load (Load meter 2) only (lower) 2 : Display both spindle and Z axis loads 3 : Display Z axis load (Load meter 2) only (upper) After the display type is set, the control area is registered as a redraw area.
Example	Sets the GNXLoadMeter00000 display type in the self screen to 1. <code>GCSLoadMeterSetDispType(-1, "GNXLoadMeter00000", 1);</code>

5.24 SPCommand

GCSSPCommandSetDispSpAxis	Set display order of spindles
Syntax	GCSSPCommandSetDispSpAxis(nWindowNo, strName, gmSPs, ISpNum);
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)GMEM gmSPs : global memory for storing spindle Nos.</p> <p>(i)LONG ISpNum : the number of spindles to be displayed</p>
Return value	None
Details	<p>Sets the display order of spindles.</p> <p>If you wish to display the 1st spindle, set the spindle No. to 0.</p> <p>Either the setting value of the property item S_Number or that of the argument ISpNum, whichever is smaller, is enabled.</p> <p>After the display order is set, the control area is registered as a redraw area.</p> <p>(Note) Prepare global memories for storing spindle Nos. by the number of spindles to be displayed (Four bytes/spindle).</p>
Example	<pre> Sets the GNXSPCommand00000 spindle No. in the self screen to the 1st and 3rd spindles. GMEM mem; mem = GMEMCreate("DISPSP", 8); 'Create global memories for two spindles GMEMSetLong(mem, 0, 0); 'Set the 1st spindle (0) in the first memory GMEMSetLong(mem, 4, 2); 'Set the 3rd spindle (2) in the second memory GCSSPCommandSetDispSpAxis(-1, "GNXSPCommand00000", mem, 2); GMEMDelete(mem); </pre>

5.25 NCTable

GCSNCTableSetCellBackColor	Set background color of each cell
Syntax	<code>GCSNCTableSetCellBackColor(nWindowNo, strName, gcColor,usLine, usRow);</code>
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No.(Specify -1 for self screen) (i)STRING strName : control name (i)LONG gcColor : color code for background color (RGB) (i)SHORT usLine : line No. (from 0) (i)SHORT usRow : row No. (from 0)
Return value	<ul style="list-style-type: none"> (Long) Setting result 0x0 : Normal 10x2001 : cell No. is out of range
Details	<p>Sets the background color to the designated cell. After the background color is set, the control area is registered as a redraw area.</p>
Example	<p>Sets green (0x008000) to the background color of the cell in GNCTable00000 line No.3, row No.2 in the self screen.</p> <pre>LONG Stat; Stat = GCSNCTableSetCellBackColor(-1, "GNCTable00000", H008000, 3, 2);</pre>

GCSNCTableSetCellString	Set character string of each cell
Syntax	<code>GCSNCTableSetCellString(nWindowNo, strName, pString, usLine, usRow);</code>
Argument	(i)LONG nWindowNo : screen No.(Specify -1 for self screen) (i)STRING strName : control name (i)STRING pString : character string to be set (0 to 128 characters) (i)SHORT usLine : line No. (from 0) (i)SHORT usRow : row No. (from 0)
Return value	(Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2095 : failed to reserve memory
Details	Sets the character string to the designated cell. After the character string is set, the control area is registered as a redraw area.
Example	Sets character string "Test" to the cell in GNCTable00000 line No.3, row No.2 in the self screen. <code>LONG Stat; Stat = GCSNCTableSetCellString(-1, "GNCTable00000", "Test", 3, 2);</code>

GCSNCTableGetCellString	Get string for each cell
Syntax	<code>GCSNCTableGetCellString(nWindowNo, strName, pString, usLine, usRow);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (o)STRING pString : character string to be acquired (i)SHORT usLine : line No. (from 0) (i)SHORT usRow : row No. (from 0)
Return value	(Long) Getting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2094 : length of the acquired character string is illegal
Details	Gets the character string in the designated cell.
Example	Gets up to 50 characters of the displayed character string in GNCTable00000 line No.3, row No.2 in the self screen to "pString". <pre>STRING pString; LONG Stat; Stat = GCSNCTableGetCellString(-1, "GNCTable00000", pString,3, 2);</pre>

GCSNCTableSetSubCursorNum	Set position of sub cursor
Syntax	<code>GCSNCTableSetSubCursorNum(nWindowNo, strName, usLine, usRow);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)SHORT usLine : line No. (from 0) (i)SHORT usRow : row No. (from 0)
Return value	(Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2091 : sub cursor is invalid
Details	Sets the display position of the sub cursor. After the position is set, the control area is registered as a redraw area.
Example	Sets the display position of sub cursor to GNCTable00000 line No.3, row No.2 in the self screen. LONG Stat; Stat = GCSNCTableSetSubCursorNum(-1, "GNCTable00000", 3, 2);

GCSNCTableGetSubCursorNum	Get position of sub cursor
Syntax	GCSNCTableGetSubCursorNum(nWindowNo, strName, gmPoint);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (o)GMEM gmPoint : global memory for line and row No.
Return value	(Long) Getting result 0x0 : Normal 0x2091 : sub cursor is invalid
Details	Gets the display position of sub cursor
Example	Gets the display position of sub cursor in GNCTable00000 in the self screen to: nLine: line No. of sub cursor nRow: row No. of sub cursor SHORT nLine; SHORT nRow; LONG Stat; GMEM mem; mem = GMEMCreate("MATRIX", 4); Stat = GCSNCTableGetSubCursorNum(-1, "GNCTable00000", mem); nLine = GMEMGetShort(mem, 0); nRow = GMEMGetShort(mem, 2); GMEMDelete(mem);

GCSNCTableSetCellWidth	Set width of cell
Syntax	<code>GCSNCTableSetCellWidth(nWindowNo, strName, usRowNum, nWidth, nRatioMode);</code>
Argument	<ul style="list-style-type: none">(i)LONG nWindowNo : screen No. (Specify -1 for self screen)(i)STRING strName : control name(i)SHORT usRowNum : row No. (from 0)(i)SHORT nWidth : row width (from 1)(i)SHORT nRatioMode : row ratio mode (0:ratio 1:Pixel)
Return value	<ul style="list-style-type: none">(Long) Setting result0x0 : Normal0x2001 : cell No. is out of range
Details	<p>Sets width of the designated cell. After the width is set, the control area is registered as a redraw area.</p>
Example	<p>Sets width of cell in GNCTable00000 line No.3, row in the self screen to "30" with Pixel mode.</p> <pre>LONG Stat; Stat = GCSNCTableSetCellWidth(-1, "GNCTable00000", 3, 30, 1);</pre>

GCSNCTableGetCellNumFromPoint	Get cell No. including designated coordinate
 Syntax	GCSNCTableGetCellNumFromPoint(nWindowNo, strName, ptPoint gmPoint);
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)GMEM gptLPoint : global memory for coordinate (o)GMEM gmPoint : global memory for line and row No.
 Return value	<ul style="list-style-type: none"> (Long) Getting result 0x0 : Normal 0x2001 : cell No. is out of range
 Details	Gets cell No. including the designated coordinate (absolute coordinate).
 Example	<p>Get the cell position corresponding to X coordinate : 100 (Pixel), Y coordinate : 50 (Pixel) in "GNCTable00000" in the self screen as:</p> <pre> nLine: cell's line No. including corresponding coordinate nRow: cell's row No. including corresponding coordinate GMEM mem1; mem1 = GMEMCreate("TESTMEM", 4); GMEMSetShort(mem1, 0, 100); GMEMSetShort(mem1, 2, 50); SHORT nLine; SHORT nRow; LONG Stat; GMEM mem2; mem2 = GMEMCreate("MATRIX", 4); Stat = GCSNCTableGetCellNumFromPoint(-1, "GNCTable00000", mem1, mem2); nLine = GMEMGetShort(mem2, 0); nRow = GMEMGetShort(mem2, 2); GMEMDelete(mem1); GMEMDelete(mem2); </pre>

GCSNCTableSetLineTitleString		Set line title
Syntax		GCSNCTableSetLineTitleString(nWindowNo, strName, pString, usLine);
Argument		(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)STRING pString : character string to be set (0 to 128) (i)SHORT usLine : line No. (from 0)
Return value		(Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2092 : title hidden mode 0x2095 : failed to reserve memory
Details		Sets title to the designated line. After the title is set, the control area is registered as a redraw area.
Example		Set character string "No.1" to GNCTable00000 line No.3 in the self screen as the title. LONG Stat; Stat = GCSNCTableSetLineTitleString(-1, "GNCTable00000", "No.1", 3);

GCSNCTableGetLineTitleString		Get line title
Syntax	GCSNCTableGetLineTitleString(nWindowNo, strName, pString, usLine);	
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (o)STRING pString : character string to be acquired (i)SHORT usLine : line No. (from 0)	
Return value	(Long) Getting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2092 : title hidden mode 0x2094 : length of the acquired character string is illegal	
Details	Gets the line title in the designated line.	
Example	Gets the displayed character string for a line title in GNCTable00000 line No.3 in the self screen. STRING pString; LONG Stat; Stat =GCSNCTableGetLineTitleString(-1, "GNCTable00000", pString, 3);	

GCSNCTableSetRowTitleString		Set row title
Syntax	GCSNCTableSetRowTitleString(nWindowNo, strName, pString, usRow);	
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)STRING pString : character string to be set (0 to 128) (i)SHORT usRow : row No. (from 0)	
Return value	(Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2092 : title hidden mode 0x2095 : failed to reserve memory	
Details	Sets title to the designated row. After the title is set, the control area is registered as a redraw area.	
Example	Set character string "SYSTEM1" to GNCTable00000 row No.2 in the self screen as a title. LONG Stat; Stat = GCSNCTableSetRowTitleString(-1,"GNCTable00000","SYSTEM1", 2);	

GCSNCTableGetRowTitleString		Get row title
Syntax	GCSNCTableGetRowTitleString(nWindowNo, strName, pString, usRow);	
Argument	(i)LONG nWindowNo : screen No.(Specify -1 for self screen) (i)STRING strName : control name (o)STRING pString : character string to be acquired (i)SHORT usRow : row No. (from 0)	
Return value	(Long) Getting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2092 : title hidden mode 0x2094 : length of the acquired character string is illegal	
Details	Gets the title in the designated row.	
Example	Gets the displayed character string for a title in GNCTable00000 row No.2 in the self screen. STRING pString; LONG Stat; Stat =GCSNCTableGetRowTitleString(-1, "GNCTable00000", pString, 2);	

GCSNCTableSetLineTitleStringPosition	Set character string position of line title
 Syntax	<code>GCSNCTableSetLineTitleStringPosition(nWindowNo, strName, ucHPosition, ucVPosition, usLine);</code>
 Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen)</p> <p>(i)STRING strName : control name</p> <p>(i)CHAR ucHPosition : character position - horizontal</p> <ul style="list-style-type: none"> 0 : Align left 1 : Center 2 : Align right <p>(i)CHAR ucVPosition : character position - vertical</p> <ul style="list-style-type: none"> 0 : Align top 1 : Center 2 : Align bottom <p>(i)SHORT usLine : line No. (from 0)</p>
 Return value	<p>(Long) Setting result</p> <p>0x0 : Normal</p> <p>0x2001 : cell No. is out of range</p> <p>0x2092 : title hidden mode</p> <p>0x2093 : value is out of setting range</p>
 Details	<p>Sets a character string position of designated line title.</p> <p>After the position is set, the control area is registered as a redraw area.</p>
 Example	<p>Set "Align left" to "horizontal" and set "Align bottom" to "vertical" of the character position of line title in GNCTable00000 line No.3 in the self screen.</p> <pre>LONG Stat; Stat = GCSNCTableSetLineTitleStringPosition(-1, "GNCTable00000", 0, 2, 3);</pre>

GCSNCTableSetRowTitleStringPosition	Set character string position of row title
Syntax	<code>GCSNCTableSetRowTitleStringPosition(nWindowNo, strName, ucHPosition, ucVPosition, usRow);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen)</p> <p>(i)STRING strName : control name</p> <p>(i)CHAR ucHPosition : character position - horizontal 0 : Align left 1 : Center 2 : Align right</p> <p>(i)CHAR ucVPosition : character position - vertical 0 : Align top 1 : Center 2 : Align bottom</p> <p>(i)SHORT usRow : row No. (from 0)</p>
Return value	<p>(Long) Setting result</p> <p>0x0 : Normal</p> <p>0x2001 : cell No. is out of range</p> <p>0x2092 : title hidden mode</p> <p>0x2093 : value is out of setting range</p>
Details	<p>Sets a character string position of designated row title.</p> <p>After the position is set, the control area is registered as a redraw. area.</p>
Example	<p>Set "Center" to "horizontal" and set "Align top" to "vertical" of the character position of row title in GNCTable00000 line No.2 in the self screen.</p> <pre>LONG Stat; Stat = GCSNCTableSetRowTitleStringPosition(-1, "GNCTable00000", 1, 0, 2);</pre>

GCSNCTableSetCellStringPosition	Set character string position of data area
 Syntax	<code>GCSNCTableSetCellStringPosition(nWindowNo, strName, ucHPosition, ucVPosition, usLine, usRow);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)CHAR ucHPosition : character position - horizontal <ul style="list-style-type: none"> 0 : Align left 1 : Center 2 : Align right (i)CHAR ucVPosition : character position - vertical <ul style="list-style-type: none"> 0 : Align top 1 : Center 2 : Align bottom (i)SHORT usLine : line No. (from 0) (i)SHORT usRow : row No. (from 0)
 Return value	<ul style="list-style-type: none"> (Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2093 : value is out of setting range
 Details	<p>Sets a character string position of designated data area. After the position is set, the control area is registered as a redraw area.</p>
 Example	<p>Set "Align right" to "horizontal" and set "Center" to "vertical" of the character string position of data area in GNCTable00000 line No.3, row No.2 in the self screen.</p> <pre>LONG Stat; Stat = GCSNCTableSetCellStringPosition(-1, "GNCTable00000", 2, 1, 3, 2);</pre>

GCSNCTableSetBeforeSubCursorNum	Set the last sub cursor No.
Syntax	<code>GCSNCTableSetBeforeSubCursorNum(nWindowNo, strName, usLine, usRow);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)SHORT usLine : line No. (from 0) (i)SHORT usRow : row No. (from 0)
Return value	(Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2091 : sub cursor is invalid
Details	Sets a designated cell position as the last position before the sub cursor moves. After the position is set, the control area is registered as a redraw area.
Example	Set GNCTable00000 line No.0, row No.0 in the self screen as the last position before sub cursor moves. <code>LONG Stat; Stat = GCSNCTableSetBeforeSubCursorNum(-1, "GNCTable00000", 0, 0);</code>

GCSNCTableGetBeforeSubCursorNum	Get the last sub cursor No.
Syntax	GCSNCTableGetBeforeSubCursorNum(nWindowNo, strName, gmPoint);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (o)GMEM gmPoint : Global memory for line and row No.
Return value	(Long) Setting result 0x0 : Normal 0x2091 : sub cursor is invalid
Details	Gets the last position before the sub cursor moves. If it is combined with the function that gets the sub cursor position, the movement amount of the sub cursor is obtained.
Example	The last position for GNCTable00000 in the self screen before the sub cursor moves is obtained as: nLine: line No. of the cell before sub cursor moves nRow: row No. of the cell before sub cursor moves SHORT nLine; SHORT nRow; LONG Stat; GMEM mem; mem = GMEMCreate("MATRIX", 4); Stat = GCSNCTableGetBeforeSubCursorNum(-1, "GNCTable00000", mem); nLine = GMEMGetShort(mem, 0); nRow = GMEMGetShort(mem, 2); GMEMDelete(mem);

GCSNCTableSetLineTitleBackColor	Set background color of line title
Syntax	GCSNCTableSetLineTitleBackColor(nWindowNo, strName, gcColor, usLine);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)LONG gcColor : color code for background color(RGB) (i)SHORT usLine : line No. (from 0)
Return value	(Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2092 : title hidden mode
Details	Sets background color of the designated line title. After the color is set, the control area is registered as a redraw area.
Example	Set green (0x008000) to the background color of the line title in GNCTable00000 line No.3 in the self screen. LONG Stat; Stat = GCSNCTableSetLineTitleBackColor(-1, "GNCTable00000", H008000, 3);

GCSNCTableSetRowTitleBackColor	Set background color of row title
 Syntax	<code>GCSNCTableSetRowTitleBackColor(nWindowNo, strName, gcColor, usRow);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No.(Specify -1 for self screen) (i)STRING strName : control name (i)LONG gcColor : color code for background color(RGB) (i)SHORT usRow : row No. (from 0)
 Return value	<ul style="list-style-type: none"> (Long) Setting result 0x0 : Normal 0x2001 : cell No. is out of range 0x2092 : title hidden mode
 Details	<p>Sets background color of the designated row title. After the color is set, the control area is registered as a redraw area.</p>
 Example	<p>Set green (0x008000) to the background color of the row title for GNCTable00000 line No.2 in the self screen.</p> <pre>LONG Stat; Stat = GCSNCTableSetRowTitleBackColor(-1, "GNCTable00000", H008000, 2);</pre>

GCSNCTableSetSubCursorBackColor	Set background color of sub cursor
 Syntax	<code>GCSNCTableSetSubCursorBackColor(nWindowNo, strName, gcColor);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : screen No. (Specify -1 for self screen) (i)STRING strName : control name (i)LONG gcColor : color code for background color(RGB)
 Return value	<ul style="list-style-type: none"> (Long) Setting result 0x0 : Normal
 Details	<p>Sets background color of the sub cursor. After the color is set, the control area is registered as a redraw area.</p>
 Example	<p>Set green (0x008000) to the background color of the sub cursor in GNCTable00000 in the self screen.</p> <pre>LONG Stat; Stat = GCSNCTableSetSubCursorBackColor (-1, "GNCTable00000", H008000);</pre>

5.26 InputBox

GCSInputBoxSetPasswordStatus	Set password display status
Syntax	GCSInputBoxSetPasswordStatus(nWindowNo, strName, fStatus);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : password display status
Return value	None
Details	Sets whether the password will be displayed for input boxes or not. One of the following values is set for fStatus. 0: normal display status 1: password display status After the password display status is set, the control area is registered as a redraw area.
Example	Sets the GTextBox00000 password display status in the self screen to 1. GCSInputBoxSetPasswordStatus(-1, "GInputBox00000", 1);

GCSInputBoxGetPasswordStatus	Get password display status
Syntax	GCSInputBoxGetPasswordStatus(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: normal display status 1: password display status
Details	Gets whether the input box display status is normal display status or the password display status.
Example	Gets the GInputBox00000 password display status in the self screen. LONG Stat; Stat = GCSInputBoxGetPasswordStatus(-1, "GInputBox00000");

GCSInputBoxSetString	Set display character string
Syntax	GCSInputBoxSetString(nWindowNo, strName, pString);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (i) STRING pString : display character string
Return value	0: setting failed 1: setting succeeded
Details	Sets the display character string. After the display character string is set, the control area is registered as a redraw area.
Example	Sets the character string "ABCD" to GInputBox00000 in the self screen. GCSInputBoxSetString(-1, "GInputBox00000", "ABCD");

GCSInputBoxGetString	Get display character string
Syntax	GCSInputBoxGetString(nWindowNo, strName, pString);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name (o) STRING pString : display character string
Return value	0: acquisition failed 1: acquisition succeeded
Details	Stores the display character string in pString.
Example	Gets the GInputBox00000 display character string in the self screen in strStat. STRING strStat; GCSInputBoxGetString(-1, "GInputBox00000", strStat);

GCSInputBoxSetGValue	Set display value
Syntax	GCSInputBoxSetGValue(nWindowNo, strName, gvValue);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)GMEM gvValue : global memory for setting value
Return value	0: setting failed 1: setting succeeded
Details	Sets the value displayed in an input box. Numbers are converted to character strings according to the format defined by the control to reflect the INPUT. If the conversion of numbers to character strings fails, or the converted character strings exceeds the maximum number of characters, or if any control is not specified as the destination to reflect the INPUT, an error is returned in the return value. After the display value is set, the control area is registered as a redraw area.
Example	Sets the signed decimal integer value 100 as a value to be displayed in the GInputBox00000 in the self screen. <pre>mem = GMEMCreate("TESTMEM", 4) ; GMEMSetLong(mem, 0, 100) ; GCSInputBoxSetGValue(-1, "GInputBox00000", mem) ; GMEMDelete(mem);</pre>

GCSInputBoxGetGValue	Get display value
Syntax	GCSInputBoxGetGValue(nWindowNo, strName, gvValue);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (o)GMEM gvValue : global memory to numerical value
Return value	0: acquisition failed 1: acquisition succeeded
Details	Gets the value displayed in an input box. Display character strings are converted to numbers according to the character string type defined by the control to reflect the INPUT and stored in the argument. If the value is not displayed or the conversion into numbers fails, or if any control is not specified as the destination to reflect the INPUT, an error is returned in the return value.
Example	Gets the value displayed in GInputBox00000 in the self screen as nVal : LONG integer value. GMEM mem; LONG nVal; mem = GMEMCreate("TESTMEM", 4) ; GCSInputBoxGetGValue(-1, "GInputBox00000", mem) ; nVal = GMEMGetLong(mem, 0) ; GMEMDelete(mem);

GCSInputBoxSetFocusEffect	Set effect during focus
Syntax	<code>GCSInputBoxSetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucFocusEffect : effect during focus
Return value	None
Details	Sets the effect during focus. One of the following values is set for ucFocusEffect. 1: No effect 2: With cursor 3: Select After the effect during focus is set, the control area is registered as a redraw area.
Example	Sets the GInputBox00000 effect during focus in the self screen to 1. <code>GCSInputBoxSetFocusEffect(-1, "GInputBox00000", 1);</code>
GCSInputBoxGetFocusEffect	Get effect during focus
Syntax	<code>GCSInputBoxGetFocusEffect(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	1: No effect 2: With cursor 3: Select Besides the above: illegal display setting
Details	Gets the effect used during focus.
Example	Gets the GInputBox00000 effect during focus in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSInputBoxGetFocusEffect(-1, "GInputBox00000");</code>

GCSInputBoxSetBackGroundPattern	Set background fill status
Syntax	<code>GCSInputBoxSetBackGroundPattern(nWindowNo, strName, nBackGroundPattern);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nBackGroundPattern : background fill status
Return value	None
Details	Sets the background color fill status. One of the following values is set for nBackGroundPattern: -1: no fill -2: with background fill After the background fill status is set, the control area is registered as a redraw area.
Example	Sets the GInputBox00000 background fill status in the self screen to -2. <code>GCSInputBoxSetBackGroundPattern(-1, "GInputBox00000", -2);</code>

GCSInputBoxGetBackGroundPattern	Get background fill status
Syntax	<code>GCSInputBoxGetBackGroundPattern(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Background fill status -1: no fill -2: with background fill
Details	Gets the background color fill status.
Example	Gets the GInputBox00000 background fill status in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSInputBoxGetBackGroundPattern(-1, "GInputBox00000");</code>

GCSInputBoxSetCalcFlag	Set operation function
Syntax	<code>GCSInputBoxSetCalcFlag(nWindowNo, strName, ucCalcFlag);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucCalcFlag : availability of operation function
Return value	None
Details	Specify the availability of operation function. One of the following values is set for ucCalcFlag. 0: Without operation function 1: With operation function
Example	Sets the GInputBox00000 operation function in the self screen to "1". <code>GCSInputBoxSetCalcFlag(-1, "GInputBox00000", 1);</code>

GCSInputBoxGetCalcFlag	Get operation function
Syntax	<code>GCSInputBoxGetCalcFlag(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: Without operation function 1: With operation function Besides the above: illegal setting
Details	Gets the availability of operation function
Example	Gets the GInputBox00000 operation function availability in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSInputBoxGetCalcFlag(-1, "GInputBox00000");</code>

GCSInputBoxSetInputValue	Set the control to reflect the INPUT
Syntax	GCSInputBoxSetInputValue(nWindowNo, strName, ucSetType);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucSetType : setting method (absolute/incremental)
Return value	0: setting failed 1: setting succeeded
Details	Sets the input contents to the control to reflect the INPUT. The setting method can be selected from absolute or incremental. When the absolute is selected, the value will directly be set. And when the incremental is selected, the value in the control to which the INPUT will be reflected, will be added to the input value. One of the following values is set for ucSetType. 0: Absolute setting 1: Incremental setting After the setting is made, the control area is registered as a redraw area. If any control is not specified as the destination to reflect the INPUT, an error is returned in the return value.
Example	Sets the added value to the GInputBox00000 control specified to reflect the INPUT in the self screen (1). GCSInputBoxSetInputValue(-1, "GInputBox00000", 1);

GCSInputBoxSetEchoBack	Set echo back
Syntax	<code>GCSInputBoxSetEchoBack(nWindowNo, strName, ucEchoBack);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucEchoBack : availability of echo back
Return value	None
Details	Set whether to echo back or not. One of the following values is set for ucEchoBack. 0: Do not echo back 1: Echo back When 1(Echo back) is set and, also, a control is specified as the destination to reflect the INPUT, its content will be reflected and displayed in the input box.
Example	Sets the GInputBox00000 echo back in the self screen to 1. <code>GCSInputBoxSetEchoBack(-1, "GInputBox00000", 1);</code>

GCSInputBoxGetEchoBack	Get echo back
Syntax	<code>GCSInputBoxGetEchoBack(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: Do not echo back 1: Echo back Besides the above: illegal display setting
Details	Gets whether to echo back or not to echo back.
Example	Gets the availability of echo back in the GInputBox0000 in the self screen in Stat. LONG Stat; Stat = GCSInputBoxGetEchoBack(-1, "GInputBox00000");

GCSInputBoxSetAbsIncType	Set input method (absolute/incremental)
Syntax	<code>GCSInputBoxSetAbsIncType(nWindowNo, strName, nInputType);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nInputType : input method (absolute/incremental)
Return value	None
Details	Select the input method (absolute/incremental) One of the following values is set for nInputType. 0: Absolute input 1: Incremental input
Example	Sets GInputBox00000 input method (absolute/incremental) in the self screen to "1". <code>GCSInputBoxSetAbsIncType(-1, "GInputBox00000", 1);</code>

GCSInputBoxGetAbsIncType	Get input method (absolute/incremental)
Syntax	<code>GCSInputBoxGetAbsIncType(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: Absolute input 1: Incremental input Besides the above: illegal display setting
Details	Gets the input method (absolute/incremental)
Example	Gets GInputBox00000 input method (absolute/incremental) in the self screen in Stat. LONG Stat; Stat = GCSInputBoxGetAbsIncType(-1, "GInputBox00000");

GCSInputBoxSetRefrectControl		Set the control to reflect the INPUT
Syntax	GCSInputBoxSetRefrectControl(nWindowNo, strName, strRefrectControlName);	
Argument	(i)LONG nWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)STRING strRefrectControlName	: name of the control to reflect the INPUT
Return value	0: setting failed 1: setting succeeded	
Details	<p>Set the control to reflect the INPUT. One of the following control names is set for strRefrectControlName.</p> <ul style="list-style-type: none">- Text box control- PLC text box control- NC data text box control <p>If a control name not mentioned above is set, an error is returned in the return value.</p>	
Example	<p>Sets the text box(GTextBox00001) in the control to reflect the INPUT of GInputBox00000 in the self screen in Stat.</p> <pre>GCSInputBoxSetRefrectControl(-1, "GInputBox00000","GTextBox00001");</pre>	

GCSInputBoxGetRefrectControlTextType	Set character string type of control to reflect the INPUT
Syntax	<code>GCSInputBoxGetRefrectControlTextType(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Character string type <u>When the control to reflect the INPUT is a "text box".</u> GTEXT_TYPE_STRING(0) : character string GTEXT_TYPE_SHORT(1) : short value GTEXT_TYPE USHORT(2) : unsigned short value GTEXT_TYPE_LONG(3) : long value GTEXT_TYPE ULONG(4) : unsigned long value GTEXT_TYPE_FLOAT(5) : float value Besides the above : illegal setting
	<u>When the control to reflect the INPUT is a "PLC text box".</u> GPLCTEXT_TYPE_DEC(1) : signed decimal integer GPLCTEXT_TYPE_UDEC(2) : unsigned decimal integer GPLCTEXT_TYPE_HEX(3) : hexadecimal integer GPLCTEXT_TYPE_FLOAT(4) : real number (float) GPLCTEXT_TYPE_DOUBLE(5) : real number (double) GPLCTEXT_TYPE_STRING(6) : character sequence Besides the above : illegal setting
	<u>When the control to reflect the INPUT is a "NC data text box".</u> GNCTEXT_TYPE_STRING(0) : character string GNCTEXT_TYPE_BIN(1) : binary integer GNCTEXT_TYPE_DEC(2) : signed decimal integer GNCTEXT_TYPE_UDEC(3) : unsigned decimal integer GNCTEXT_TYPE_HEX(4) : hexadecimal integer GNCTEXT_TYPE_DOUBLE(5) : real number (double) Besides the above : illegal setting
Details	Gets the character string type (character string/numerical value/real number etc.) of the control to reflect the INPUT.
Example	Gets GInputBox00000 character string type of control to reflect the INPUT in the self screen to Stat. LONG Stat; Stat= GCSInputBoxGetRefrectControlTextType(-1," GInputBox00000") ;

GCSInputBoxGetInputMode	Get input mode (insert/overwrite)
Syntax	GCSInputBoxGetInputMode(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: Insert mode 1: Overwrite mode
Details	Gets the current input mode (insert/overwrite).
Example	Gets the GInputBox00000 current input mode in the self screen in Stat. LONG Stat; Stat = GCSInputBoxGetInputMode(-1, "GInputBox00000");
Complement	When the cursor type is "Vertical line", it always gets 0(insert mode).

GCSInputBoxGetSubCursorControl	Get the ID of the sub cursor display control
Syntax	<code>GCSInputBoxGetSubCursorControl (nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	-1 : acquisition failed ID of the control where the : acquisition succeeded sub cursor is pointed
Details	Gets the ID of the control where the sub cursor is pointed at. When the sub cursor settings are not made, an error (-1) is returned to the return value.
Example	Gets GInputBox00000 ID of the control where the sub cursor is pointed in the self screen. <code>LONG _ICtrlid; _ICtrlid = GCSInputBoxGetSubCursorControl (-1,"GInputBox00000");</code>
Complement	There are two ways to get the control name from the control ID. (1) Acquisition from the macro editing dialog box The definition of a control ID will be output to the file created when converted for interpreter execution. The control ID definition file will be "PNLPG##.GID". ### : Three digits indicating the page No. in hexadecimal number. Recreate the converted "PNLPG##.GID" after adding or deleting a control. Output example) <code>GINPUTBOX00000,0,GInputBox GTEXTBOX00001,1,GTextBox GNCPCLTEXTBOX00004,2,GNCPCLTextbox GNCDATATEXTBOX00007,3,GNCDataTextBox GBASICCONTROL00000,4,GBasicControl</code> (2) Acquisition by generating the source The control ID will be output as the enum definition to the file created when the source is generated for compilation execution. The file to which the control ID will be output will be a panel/window hpp file. The hpp file name at default will be "GCPPanel****.hpp" for a panel and "GCWindow****.hpp" for a window. **** : Five digits indicating the page No. in hexadecimal number. Regenerate the source code and recreate "GCPPanel****.hpp" or "GCWindow****.hpp" after adding or deleting a control. Output example) <code>class GCPPanel00000 : public GCPPanel { public: //{{CONTROL_ID enum { GSOFTKEY00000 = 0, GTEXTBOX00001 = 1, GNCPCLTEXTBOX00004 = 2, GNCDATATEXTBOX00007 = 3, GBASICCONTROL00000 = 4, }; //}}CONTROL_ID</code>

5.27 SoftKey

GCSSoftKeySetPasswordStatus	Set password display status
Syntax	GCSSoftKeySetPasswordStatus(nWindowNo, strName, fStatus);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG fStatus : password display status
Return value	None
Details	<p>Sets whether the password will be displayed for the ten-key control.</p> <p>One of the following values is set for fStatus.</p> <ul style="list-style-type: none"> 0: normal display status 1: password display status <p>After the password display status is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GTextBox00000 password display status in the self screen to "1".</p> <pre>GCSSoftKeySetPasswordStatus(-1, "GSoftKey00000", 1);</pre>

GCSSoftKeyGetPasswordStatus	Get password display status
Syntax	GCSSoftKeyGetPasswordStatus(nWindowNo, strName);
Argument	(i) LONG nWindowNo : screen No. (Specify -1 for self screen.) (i) STRING strName : control name
Return value	0: normal display status 1: password display status
Details	Gets whether the ten-key control display status is normal display status or the password display status.
Example	<p>Gets the GSoftKey00000 password display status in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSSoftKeyGetPasswordStatus(-1, "GSoftKey00000");</pre>

GCSSoftKeySetString	Set display character string
Syntax	GCSSoftKeySetString(nWindowNo, strName, pString);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)STRING pString : display character string
Return value	0: setting failed 1: setting succeeded
Details	Sets the character string to display in the input data display part. After the display character string is set, the control area is registered as a redraw area.
Example	Sets the character string "ABCD" to GSoftKey00000 input data display part in the self screen. <code>GCSSoftKeySetString(-1, "GSoftKey00000", "ABCD");</code>

GCSSoftKeyGetString	Get display character string
Syntax	GCSSoftKeyGetString(nWindowNo, strName, pString);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (o)STRING pString : display character string
Return value	0: acquisition failed 1: acquisition succeeded
Details	Stores the display character string in pString.
Example	Gets the character string displayed in GSoftKey00000 input data display part in the self screen in strStat. <code>STRING strStat; GCSSoftKeyGetString(-1, "GSoftKey00000", strStat);</code>

GCSSoftKeySetGValue	Set display value
Syntax	<code>GCSSoftKeySetGValue(nWindowNo, strName, gvValue);</code>
Argument	<ul style="list-style-type: none">(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)(i)STRING strName : control name(i)GMEM gvValue : global memory for setting value
Return value	<ul style="list-style-type: none">0: setting failed1: setting succeeded
Details	<p>Sets the value to be displayed in the input data display part. Numbers are converted to character strings according to the format defined by the control to reflect the INPUT.</p> <p>If the conversion of numbers to character strings fails, or the converted character strings exceeds the maximum number of characters, or if any control is not specified as the destination to reflect the INPUT, an error is returned in the return value.</p> <p>After the display value is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the signed decimal integer value 100 as a value to be displayed in the GSoftKey00000 in the self screen.</p> <pre>mem = GMEMCreate("TESTMEM", 4) ; GMEMSetLong(mem, 0, 100) ; GCSSoftKeySetGValue(-1, "GSoftKey00000", mem) ; GMEMDelete(mem);</pre>

GCSSoftKeyGetGValue	Get display value
Syntax	<code>GCSSoftKeyGetGValue(nWindowNo, strName, gvValue);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (o)GMEM gvValue : global memory for numerical value
Return value	0: acquisition failed 1: acquisition succeeded
Details	Gets the value displayed in the input data display part. Displayed character strings are converted to numbers according to the character string type defined by the control to reflect the INPUT and stored in the argument. If the value is not displayed or the conversion into numbers fails, an error is returned in the return value.
Example	<pre>Gets the value displayed in GSoftKey00000 in the self screen as nVal : LONG integer value. GMEM mem; LONG nVal; mem = GMEMCreate("TESTMEM", 4) ; GCSSoftKeyGetGValue(-1, "GSoftKey00000", mem) ; nVal = GMEMGetLong(mem, 0) ; GMEMDelete(mem);</pre>

GCSSoftKeySetFocusEffect	Set effect during focus
Syntax	<code>GCSSoftKeySetFocusEffect(nWindowNo, strName, ucFocusEffect);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucFocusEffect : effect during focus
Return value	None
Details	<p>Sets the effect during focus. One of the following values is set for ucFocusEffect.</p> <p>1: No effect 2: With cursor</p> <p>Only when the property "Input type" is set to "All key type", the cursor will be displayed at the input data display part.</p> <p>After the effect during focus is set, the control area is registered as a redraw area.</p>
Example	<p>Sets the GSoftKey00000 effect during focus in the self screen to "1".</p> <pre>GCSSoftKeySetFocusEffect(-1, "GSoftKey00000", 1);</pre>
GCSSoftKeyGetFocusEffect	Get effect during focus
Syntax	<code>GCSSoftKeyGetFocusEffect(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	1: No effect 2: With cursor Besides the above: illegal display setting
Details	Gets the setting during focus.
Example	<p>Gets the GSoftKey00000 effect during focus in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSSoftKeyGetFocusEffect(-1, "GSoftKey00000");</pre>

GCSSoftKeySetCalcFlag	Set operation function
Syntax	<code>GCSSoftKeySetCalcFlag(nWindowNo, strName, ucCalcFlag);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)LONG ucCalcFlag : availability of operation function</p>
Return value	None
Details	<p>Specify the availability of operation function.</p> <p>One of the following values is set for ucCalcFlag.</p> <p>0: Without operation function</p> <p>1: With operation function</p> <p>"Without operation function" and "With operation function" can be switched over only when the property "Input type" is set to "ALL key type". When the operation function is not provided, an operator will be counted as a character. When the "Input type" is set to "Decimal number" or "Hexadecimal", the operation function will always be valid.</p>
Example	<p>Sets the GSoftKey00000 operation function in the self screen to "1".</p> <pre>GCSSoftKeySetCalcFlag(-1, "GSoftKey00000", 1);</pre>

GCSSoftKeyGetCalcFlag	Get operation function
Syntax	<code>GCSSoftKeyGetCalcFlag(nWindowNo, strName);</code>
Argument	<p>(i)LONG nWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p>
Return value	<p>0: Without operation function</p> <p>1: With operation function</p> <p>Besides the above: illegal setting</p>
Details	Gets the availability of operation function.
Example	<p>Gets the GSoftKey00000 operation function availability in the self screen in Stat.</p> <pre>LONG Stat; Stat = GCSSoftKeyGetCalcFlag(-1, "GSoftKey00000");</pre>

GCSSoftKeySetInputValue	Set the control to reflect the INPUT
Syntax	GCSSoftKeySetInputValue(nWindowNo, strName, ucSetType);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG ucSetType : Setting method (absolute/incremental)
Return value	0: setting failed 1: setting succeeded
Details	<p>Sets the input contents to the control to reflect the INPUT.</p> <p>The setting method can be selected from absolute or incremental.</p> <p>When the absolute is selected, the value will directly be set. And when the incremental is selected, the value in the control to which the INPUT will be reflected, will be added to the input value.</p> <p>One of the following values is set for ucSetType.</p> <p>0: Absolute setting 1: Incremental setting</p> <p>After the setting is made, the control area is registered as a redraw area.</p> <p>If any control is not specified as the destination to reflect the INPUT, an error is returned in the return value.</p>
Example	Sets the added value to the GInputBox00000 control specified to reflect the INPUT in the self screen (1). <code>GCSSoftKeySetInputValue(-1, "GSoftKey00000", 1);</code>

GCSSoftKeySetAbsIncType	Set input method (absolute/incremental)
Syntax	GCSSoftKeySetAbsIncType(nWindowNo, strName, nInputType);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)LONG nInputType : input method (absolute/incremental)
Return value	None
Details	Select the input method (absolute/incremental) When "Inc" is set, the Inc key button on the ten-key control will be highlighted. One of the following values is set for nInputType. 0: Absolute input 1: Incremental input
Example	Sets the input method (absolute/incremental) of GSoftKey00000 in the self screen to "1". GCSSoftKeySetAbsIncType(-1, "GSoftKey00000", 1);

GCSSoftKeyGetAbsIncType	Get input method (absolute/incremental)
Syntax	<code>GCSSoftKeyGetAbsIncType(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0: Absolute input 1: Incremental input Besides the above: illegal display setting
Details	Gets the input method (absolute/incremental)
Example	Gets GSoftKey00000 input method (absolute/incremental)in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSSoftKeyGetAbsIncType(-1, "GSoftKey00000");</code>
GCSSoftKeySetRefrectControl	Set the control to reflect the INPUT
Syntax	<code>GCSSoftKeySetRefrectControl(nWindowNo, strName, strRefrectControlName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)STRING strRefrectControlName : Name of the control to reflect the INPUT
Return value	0: setting failed 1: setting succeeded
Details	Set the control to which the INPUT is to be reflected. One of the following control names is set for strRefrectControlName. - Text box control - PLC text box control - NC data text box control If a control name not mentioned above is set, an error is returned in the return value.
Example	Sets the text box (GTextBox00001) in the control to reflect the INPUT of GInputBox00000 in the self screen in Stat. <code>GCSSoftKeySetRefrectControl(-1, "GSoftKey00000", "GTextBox00001");</code>

GCSSoftKeyGetRefrectControlTextType	Set character string type of control to reflect the INPUT
Syntax	GCSSoftKeyGetRefrectControlTextType(nWindowNo, strName);
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	<p>Character string type <u>When the control to reflect the INPUT is a "text box".</u></p> <p>GTEXT_TYPE_STRING(0) : character string GTEXT_TYPE_SHORT(1) : short value GTEXT_TYPE USHORT(2) : unsigned short value GTEXT_TYPE_LONG(3) : long value GTEXT_TYPE ULONG(4) : unsigned long value GTEXT_TYPE_FLOAT(5) : float value Besides the above : illegal setting</p> <p><u>When the control to reflect the INPUT is a "PLC text box".</u></p> <p>GPLCTEXT_TYPE_DEC(1) : signed decimal integer GPLCTEXT_TYPE_UDEC(2) : unsigned decimal integer GPLCTEXT_TYPE_HEX(3) : hexadecimal integer GPLCTEXT_TYPE_FLOAT(4) : real number Besides the above : illegal setting</p> <p><u>When the control to reflect the INPUT is a "NC data text box".</u></p> <p>GNCTEXT_TYPE_STRING(0) : character string GNCTEXT_TYPE_BIN(1) : binary integer GNCTEXT_TYPE_DEC(2) : signed decimal integer GNCTEXT_TYPE_UDEC(3) : unsigned decimal integer GNCTEXT_TYPE_HEX(4) : hexadecimal integer GNCTEXT_TYPE_DOUBLE(5) : real number (double) Besides the above : illegal setting</p>
Details	Gets the character string type (character string/numerical value/real number etc.) of the control to reflect the INPUT.
Example	<p>Gets GSoftKey00000 character string type of control to reflect the INPUT in the self screen to Stat.</p> <pre>LONG Stat; Stat= GCSSoftKeyGetRefrectControlTextType(-1,"GSoftKey00000");</pre>

GCSSoftKeyGetInputMode	Get input mode (insert/overwrite)
Syntax	<code>GCSSoftKeyGetInputMode(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	0:Insert mode 1:Overwrite modeGets the current input mode (insert/overwrite).
Details	Gets the current input mode (insert/overwrite).
Example	Gets the GSoftKey00000 current input mode in the self screen in Stat. <code>LONG Stat;</code> <code>Stat = GCSSoftKeyGetInputMode(-1, "GSoftKey00000");</code>
Complement	When the cursor type is "Vertical line", it always gets 0(insert mode).

GCSSoftKeySetTitleString	Set title bar display character string
Syntax	<code>GCSSoftKeySetTitleString(nWindowNo, strName, pTitleString);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)STRING pTitleString : title bar display character string
Return value	None
Details	Gets the character string to be displayed on the title bar. When the title name exceeds the maximum number of characters, the title name will overlap with the movement mark Δ . Make sure that the title name does not exceed the maximum number of characters. After the setting is made, the control area is registered as a redraw area.
Example	Sets "ABCD" to the GSoftKey00000 title bar in the self screen. <code>GCSSoftKeySetTitleString(-1, "GSoftKey00000", "ABCD");</code>

GCSSoftKeyGetSubCursorControl	Get the ID of the sub cursor display control
Syntax	<code>GCSSoftKeyGetSubCursorControl (nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	-1 : acquisition failed ID of the control where the :acquisition succeeded sub cursor is pointed
Details	Gets the ID of the control where the sub cursor is pointed at. When the sub cursor settings are not made, an error (-1) is returned to the return value.
Example	Gets GSoftKey00000 of the control where the sub cursor is pointed in the self screen. <code>LONG _ICtrlid; _ICtrlid = GCSSoftKeyGetSubCursorControl (-1," GSoftKey00000");</code>
Complement	There are two ways to get the control name from the control ID. (1) Acquisition from the macro editing dialog box The definition of a control ID will be output to the file created when converted for interpreter execution. The control ID definition file will be "PNLPG##.GID". ### : Three digits indicating the page No. in hexadecimal number. Recreate the converted "PNLPG##.GID" after adding or deleting a control. Output example) <code>GSOFTKEY00000,0,GSoftKey GTEXTBOX00001,1,GTextBox GNCPCLTEXTBOX00004,2,GNCPCLTextBox GNCDATATEXTBOX00007,3,GNCDataTextBox GBASICCONTROL00000,4,GBasicControl</code> (2) Acquisition by generating the source The control ID will be output as the enum definition to the file created when the source is generated for compilation execution. The file to which the control ID will be output will be a panel/window hpp file. The hpp file name at default will be "GCPPanel****.hpp" for a panel and "GCWindow****.hpp" for a window. ***** : Five digits indicating the page No. in hexadecimal number. Regenerate the source code and recreate "GCPPanel****.hpp" or "GCWindow****.hpp" after adding or deleting a control. Output example) class GCPPanel00000 : public GCPPanel <pre>{ public: //{{CONTROL_ID enum { GSOFTKEY00000 = 0, GTEXTBOX00001 = 1, GNCPCLTEXTBOX00004 = 2, GNCDATATEXTBOX00007 = 3, GBASICCONTROL00000 = 4, }; //}}CONTROL_ID</pre>

GCSNCPageChgBtnSetDestinationPageID	Set destination screen number
Syntax	<code>GCSNCPageChgBtnSetDestinationPageID(nWindowNo, strName, wDstPageID);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)UNSIGNED SHORT wDstPageID : Destination screen No.
Return value	FALSE : Abnormal TRUE : Normal
Details	Sets the destination screen number.
Example	Sets the destination screen number of GNCPAGEChangeButton00000 on self screen to 7000. <code>GCSNCPageChgBtnSetDestinationPageID (-1,"GNCPAGEChangeButton00000",7000);</code>
GCSNCPageChgBtnGetDestinationPageID	Get destination screen number
Syntax	<code>GCSNCPageChgBtnGetDestinationPageID(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	0-9999: Destination screen No.
Details	Gets the destination screen number.
Example	Gets the destination screen number of GNCPAGEChangeButton00000 on self screen to wStat. UNSIGNED SHORT wStat; <code>wStat = GCSNCPageChgBtnGetDestinationPageID (-1, "GNCPAGEChangeButton00000");</code>

GCSNCPageChgBtnSetFocusMoveToWindow	Set focus move to window
 Syntax	<code>GCSNCPageChgBtnSetFocusMoveToWindow(nWindowNo, strName, wFocusMove);</code>
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)UNSIGNED SHORT wFocusMove
 Return value	FALSE : Abnormal TRUE : Normal
 Details	Sets focus move to the target window. For wFocusMove, specify any of the following values. 0 : Perform focus move 1 : Do not perform focus move
 Example	Sets focus move for the GNCPAGEChangeButton00000 window in the self screen to [1: Do not perform focus move]. <code>GCSNCPageChgBtnSetFocusMoveToWindow (-1, "GNCPAGEChangeButton00000", 1);</code>

GCSNCPageChgBtnGetFocusMoveToWindow	Get focus move to window
 Syntax	<code>GCSNCPageChgBtnGetFocusMoveToWindow (nWindowNo, strName);</code>
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
 Return value	0 : Perform focus move 1 : Do not perform focus move
 Details	Gets focus move to the target window.
 Example	Gets focus move to the GNCPAGEChangeButton00000 window on the self screen to wStat. UNSIGNED SHORT wStat; wStat = GCSNCPageChgBtnGetFocusMoveToWindow (-1, "GNCPAGEChangeButton00000");

GCSNCPageChgBtnSetCloseWindow	Set close of source window
 Syntax	<code>GCSNCPageChgBtnSetCloseWindow(nWindowNo, strName, wCloseWindow);</code>
 Argument	<p>(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)</p> <p>(i)STRING strName : Control name</p> <p>(i)UNSIGNED SHORT wCloseWindow : Close of the source window</p>
 Return value	<p>FALSE(0) : Abnormal</p> <p>TRUE(1) : Normal</p>
 Details	<p>Sets close of the source window.</p> <p>For wCloseWindow, specify any of the following values.</p> <p>0 : Do not close the source window</p> <p>1 : Closes the source window</p>
 Example	<p>Sets close of the GNCPAGEChangeButton00000 window on the self screen to "1" (Close).</p> <pre>GCSNCPageChgBtnSetCloseWindow(-1,"GNCPAGEChangeButton00000", 1);</pre>
GCSNCPageChgBtnGetCloseWindow	Get close of source window
 Syntax	<code>GCSNCPageChgBtnGetCloseWindow(nWindowNo, strName);</code>
 Argument	<p>(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)</p> <p>(i)STRING strName : Control name</p>
 Return value	<p>0 : Do not close the source window</p> <p>1 : Closes the source window</p>
 Details	Gets close of the source window.
 Example	<p>Gets close of the GNCPAGEChangeButton00000 window on the self screen to wStat.</p> <pre>UNSIGNED SHORT wStat; nStat = GCSNCPageChgBtnGetCloseWindow (-1, "GNCPAGEChangeButton00000");</pre>

GCSNCPageChgBtnSetInputKeyID	Set input key ID
Syntax	<code>GCSNCPageChgBtnSetInputKeyID(nWindowNo, strName, wInputKeyID);</code>
Argument	<p>(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)</p> <p>(i)STRING strName : Control name</p> <p>(i)UNSIGNED SHORT wInputKeyID : Input key ID</p>
Return value	<p>FALSE(0) : Abnormal</p> <p>TRUE(1) : Normal</p>
Details	<p>Sets the input key ID.</p> <p>For wCloseWindow, specify any of the following values.</p> <p>0: No setting</p> <p>1: Switches the part system.</p> <p>2 :SFP</p> <p>3 :F0</p> <p>4: Menu list</p> <p>5: Help</p> <p>6: Displays the window.</p> <p>7: Switches the window.</p> <p>8: Menu 1</p> <p>9: Menu 2</p> <p>10: Menu 3</p> <p>11: Menu 4</p> <p>12: Menu 5</p> <p>13: Menu 6</p> <p>14: Menu 7</p> <p>15: Menu 8</p> <p>16: Menu 9</p> <p>17: Menu 10</p> <p>18: Switches the menu to the left.</p> <p>19: Switches the menu to the right.</p> <p>20 : MONITOR</p> <p>21 : SETUP</p> <p>22 : EDIT</p> <p>23 : DIAGN</p> <p>24 : MAINT</p>
Example	<p>Sets the input key ID of GNCPAGEChangeButton00000 on the self screen to "no setting".</p> <pre>GCSNCPageChgBtnSetInputKeyID(-1, "GNCPAGEChangeButton00000", 0);</pre>

GCSNCPageChgBtnGetInputKeyID	Get input key ID
 Syntax	<code>GCSNCPageChgBtnGetInputKeyID (nWindowNo, strName);</code>
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
 Return value	Input key ID 0: No setting 1: Switches the part system. 2 :SFP 3 :F0 4: Menu list 5: Help 6: Displays the window. 7: Switches the window. 8: Menu 1 9: Menu 2 10: Menu 3 11: Menu 4 12: Menu 5 13: Menu 6 14: Menu 7 15: Menu 8 16: Menu 9 17: Menu 10 18: Switches the menu to the left. 19: Switches the menu to the right. 20 : MONITOR 21 : SETUP 22 : EDIT 23 : DIAGN 24 : MAINTE
 Details	Gets the input key ID setting.
 Example	Gets the input key ID of GNCPagChangeButton00000 on the self screen to wStat. <code>UNSIGNED SHORT wStat;</code> <code>wStat = GCSNCPageChgBtnGetInputKeyID (-1, "GNCPagChangeButton00000");</code>

5.28 Graph

GCSNCGraphSetChartType	Set chart type
 Syntax	<code>GCSNCGraphSetChartType(nWindowNo, strName, nChartType);</code>
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nChartType : Chart type (0: Pie chart, 1: Band chart)
 Return value	None
 Details	Sets the chart type.
 Example	Sets the chart type of GNCGraph00000 on self screen to 0: Pie chart. <code>GCSNCGraphSetChartType(-1, "GNCGraph00000", 0);</code>
GCSNCGraphGetChartType	Get chart type
 Syntax	<code>GCSNCGraphGetChartType(nWindowNo, strName);</code>
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
 Return value	Chart type (0: Pie chart, 1: Band chart)
 Details	Gets the chart type.
 Example	Gets the chart type of GNCGraph00000 on self screen. SHORT nChartType; nChartType = GCSNCGraphGetChartType(-1, "GNCGraph00000");

GCSNCGraphSetDispDirection	Set display direction
Syntax	<code>GCSNCGraphSetDispDirection(nWindowNo, strName, nDirection);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nDirection : Display direction (0:Vertical, 1:Horizontal)
Return value	None
Details	Sets the display direction (vertical or horizontal) of the band chart.
Example	Sets the display direction of GNCGraph00000 on self screen to 1: Landscape. <code>GCSNCGraphSetDispDirection(-1, "GNCGraph00000", 1);</code>
GCSNCGraphGetDispDirection	Get display direction
Syntax	<code>GCSNCGraphGetDispDirection(nWindowNo, strName, ItemNum);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Display direction (0:Vertical, 1:Horizontal)
Details	Sets the display direction (vertical or horizontal) of the band chart.
Example	Gets the display direction of GNCGraph00000 on self screen. SHORT nDirection; nDirection =GCSNCGraphGetDispDirection(-1, "GNCGraph00000")

GCSNCGraphSetItemNum	Set number of items
Syntax	GCSNCGraphSetItemNum(nWindowNo, strName, ItemNum);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)LONG ItemNum : Number of items (1 to 32)
Return value	None
Details	Sets the number of items to be displayed in the chart.
Example	Sets the number of items for GNCGraph00000 on self screen to 6. GCSNCGraphSetItemNum(-1, "GNCGraph00000", 6);

GCSNCGraphGetItemNum	Get number of items
Syntax	GCSNCGraphGetItemNum(nWindowNo, strName, ItemNum);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Number of chart items
Details	Gets the number of items to be displayed in the chart.
Example	Gets the number of items for GNCGraph00000 on self screen. LONG ItemNum; ItemNum = GCSNCGraphGetItemNum(-1, "GNCGraph00000");

GCSNCGraphSetSection

Set section number

Syntax`GCSNCGraphSetSection(nWindowNo, strName, ISection);`**Argument**

(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name
(i)LONG ISection : Section number

Return value

None

Details

Sets the section number.

Example

Sets the section number of GNCGraph00000 on self screen to 55.
`GCSNCGraphSetSection(-1, "GNCGraph00000", 55);`

GCSNCGraphGetSection

Get section number

Syntax`GCSNCGraphGetSection(nWindowNo, strName);`**Argument**

(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name

Return value

Section number

Details

Gets the section number.

Example

Gets the section number of GNCGraph00000 on self screen.
LONG ISubSection;
`ISubSection = GCSNCGraphGetSection(-1, "GNCGraph00000");`

GCSNCGraphSetSubSection	Set sub-section number
Syntax	<code>GCSNCGraphSetSubSection(nWindowNo, strName, ISubSection);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)LONG ISubSection : Sub-section number
Return value	None
Details	Sets the sub-section number.
Example	Sets the sub-section number of GNCGraph00000 on self screen to 90000. <code>GCSNCGraphSetSubSection (-1, "GNCGraph00000", 90000);</code>
GCSNCGraphGetSubSection	Get sub-section number
Syntax	<code>GCSNCGraphGetSubSection(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Sub-section number
Details	Gets the sub-section number.
Example	Gets the sub-section number of GNCGraph00000 on self screen. <code>LONG ISubSection; ISubSection = GCSNCGraphGetSubSection (-1, "GNCGraph00000");</code>

GCSNCGraphSetGround

Set ground

Syntax`GCSNCGraphSetGround(nWindowNo, strName, IGround);`**Argument**

(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name
(i)LONG IGround : Ground

Return value

None

Details

Sets the ground.

Example

Sets the ground of GNCGraph00000 on self screen to 0.

`GCSNCGraphSetGround(-1, "GNCGraph00000", 0);`**GCSNCGraphGetGround**

Get ground

Syntax`GCSNCGraphGetGround(nWindowNo, strName);`**Argument**

(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name

Return value

Ground

Details

Gets the ground.

Example

Gets the ground of GNCGraph00000 on self screen.

`LONG IGround;``IGround = GCSNCGraphGetGround(-1, "GNCGraph00000");`

GCSNCGraphSetAxisInfo	Set axis number
Syntax	<code>GCSNCGraphSetAxisInfo(nWindowNo, strName, IAxis);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)LONG IAxis : Axis number
Return value	None
Details	Sets the axis number.
Example	Sets the axis number of GNCGraph00000 on self screen to 2. <code>GCSNCGraphSetAxisInfo(-1, "GNCGraph00000", 2);</code>

GCSNCGraphGetAxisInfo	Get axis number
Syntax	<code>GCSNCGraphGetAxisInfo(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Axis number
Details	Gets the axis number.
Example	Gets the axis number of GNCGraph00000 on self screen. <code>LONG IAxis;</code> <code>IAxis = GCSNCGraphGetAxisInfo(-1, "GNCGraph00000");</code>

GCSNCGraphSetDataType	Set data type
Syntax	<code>GCSNCGraphSetDataType(nWindowNo, strName, IDataType);</code>
Argument	<p>(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)LONG IDataType : Data type</p>
Return value	None
Details	<p>Sets the data type of NC data. For IDataType, specify any of the following values.</p> <ul style="list-style-type: none"> GNCGRAPH_DTYPE_CHAR(1) : char type GNCGRAPH_DTYPE_SHORT(2) : short value GNCGRAPH_DTYPE_LONG(3) : long value GNCGRAPH_DTYPE_DOUBLE(5) : double value GNCGRAPH_DTYPE_UCHAR(33) : unsigned char value GNCGRAPH_DTYPE USHORT(34) : unsigned short value GNCGRAPH_DTYPE ULONG(35) : unsigned long value
Example	<p>Sets the data type of GNCGraph00000 on self screen. <code>GCSNCGraphSetDataType(-1, "GNCGraph00000", 2);</code></p>
GCSNCGraphGetDataType	Get data type
Syntax	<code>GCSNCGraphGetDataType(nWindowNo, strName);</code>
Argument	<p>(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name</p>
Return value	<ul style="list-style-type: none"> GNCGRAPH_DTYPE_CHAR(1) : char type GNCGRAPH_DTYPE_SHORT(2) : short value GNCGRAPH_DTYPE_LONG(3) : long value GNCGRAPH_DTYPE_DOUBLE(5) : double value GNCGRAPH_DTYPE_UCHAR(33) : unsigned char value GNCGRAPH_DTYPE USHORT(34) : unsigned short value GNCGRAPH_DTYPE ULONG(35) : unsigned long value
Details	Gets the data type of NC data.
Example	<p>Gets the data type of GNCGraph00000 on self screen. <code>LONG DataType;</code> <code>DataType = GCSNCGraphGetDataType(-1, "GNCGraph00000");</code></p>

GCSNCGraphSetReadMethod	Set reading method
-------------------------	--------------------

 Syntax GCSNCGraphSetReadMethod(nWindowNo, strName,
nReadMethod);

 Argument (i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name
(i)SHORT nReadMethod : Reading method

 Return value None

 Details Sets the reading method of NC data.

 Example Sets 1 to the reading method of GNCGraph00000 on self screen.
GCSNCGraphSetReadMethod(-1, "GNCGraph00000", 1);

GCSNCGraphGetReadMethod	Get reading method
-------------------------	--------------------

 Syntax GCSNCGraphGetReadMethod(nWindowNo, strName);

 Argument (i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name

 Return value Reading method

 Details Sets the reading method of NC data.

 Example Gets the reading method of GNCGraph00000 on self screen.
SHORT nReadMethod;
nReadMethod = GCSNCGraphGetReadMethod(-1,
"GNCGraph00000");

GCSNCGraphSetReadOffset	Set read offset
Syntax	<code>GCSNCGraphSetReadOffset(nWindowNo, strName, lReadOffset);</code>
Argument	<ul style="list-style-type: none">(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)(i)STRING strName : Control name(i)LONG lReadOffset : Read offset
Return value	None
Details	Sets the read offset of NC data.
Example	Sets the read offset of GNCGraph00000 on self screen to 100. <code>GCSNCGraphSetReadOffset(-1, "GNCGraph00000", 100);</code>

GCSNCGraphGetReadOffset	Get read offset
Syntax	<code>GCSNCGraphGetReadOffset(nWindowNo, strName);</code>
Argument	<ul style="list-style-type: none">(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)(i)STRING strName : Control name
Return value	Read offset
Details	Gets the read offset of NC data.
Example	Gets the read offset of GNCGraph00000 on self screen. <code>LONG ReadOffset;</code> <code>ReadOffset = GCSNCGraphGetReadOffset(-1, "GNCGraph00000");</code>

GCSNCGraphSetGraphFillPattern		Set pattern
 Syntax	GCSNCGraphSetGraphFillPattern(nWindowNo, strName, nItemNum, nFillPattern);	
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nItemNum : Item No. (1 to 32) (i)SHORT nFillPattern : Pattern	
 Return value	None	
 Details	Sets the background pattern (item specification).	
 Example	Sets the pattern of item 2 of GNCGraph00000 on self screen to 7. GCSNCGraphSetGraphFillPattern(-1, "GNCGraph00000", 2, 7);	
GCSNCGraphGetGraphFillPattern		Get pattern
 Syntax	GCSNCGraphGetGraphFillPattern(nWindowNo, strName, nItemNum);	
 Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nItemNum : Item No. (1 to 32)	
 Return value	Pattern	
 Details	Gets the background pattern (item specification).	
 Example	Gets the pattern of item 3 of GNCGraph00000 on self screen. SHORT nFillPattern; GCSNCGraphGetGraphFillPattern(-1, "GNCGraph00000", 3, nFillPattern);	

GCSNCGraphSetGraphForeColor	Set foreground color
 Syntax	<code>GCSNCGraphSetGraphForeColor(nWindowNo, strName, nItemNum, IForeColor);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nItemNum : Item No. (1 to 32) (i)LONG IForeColor : Foreground color
 Return value	None
 Details	Sets the foreground color (item specification).
 Example	<p>Sets the foreground color of item 4 of GNCGraph00000 on self screen to white.</p> <pre>GCSNCGraphSetGraphForeColor(-1, "GNCGraph00000", 4, HFFFFFF);</pre>

GCSNCGraphGetGraphForeColor	Get foreground color
 Syntax	<code>GCSNCGraphGetGraphForeColor(nWindowNo, strName, nItemNum);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nItemNum : Item No. (1 to 32)
 Return value	Foreground color
 Details	Gets the foreground color (item specification).
 Example	<p>Gets the foreground color of item 3 of GNCGraph00000 on self screen.</p> <pre>LONG ForeColor; GCSNCGraphGetGraphForeColor(-1, "GNCGraph00000", 3, ForeColor);</pre>

GCSNCGraphSetGraphBackColor	Set background color								
Syntax	<code>GCSNCGraphSetGraphBackColor(nWindowNo, strName, nItemNum, IBackColor);</code>								
Argument	<table> <tr> <td>(i)LONG nWindowNo</td><td>: Screen No. (Specify "-1" for self screen.)</td></tr> <tr> <td>(i)STRING strName</td><td>: Control name</td></tr> <tr> <td>(i)SHORT nItemNum</td><td>: Item No. (1 to 32)</td></tr> <tr> <td>(i)LONG IBackColor</td><td>: Background color</td></tr> </table>	(i)LONG nWindowNo	: Screen No. (Specify "-1" for self screen.)	(i)STRING strName	: Control name	(i)SHORT nItemNum	: Item No. (1 to 32)	(i)LONG IBackColor	: Background color
(i)LONG nWindowNo	: Screen No. (Specify "-1" for self screen.)								
(i)STRING strName	: Control name								
(i)SHORT nItemNum	: Item No. (1 to 32)								
(i)LONG IBackColor	: Background color								
Return value	None								
Details	Sets the background color (item specification).								
Example	<p>Sets the background color of item 4 of GNCGraph00000 on self screen to white.</p> <pre>GCSNCGraphSetGraphBackColor(-1, "GNCGraph00000", 4, HFFFFFF);</pre>								

GCSNCGraphGetGraphBackColor	Get background color						
Syntax	<code>GCSNCGraphGetGraphBackColor(nWindowNo, strName, nItemNum);</code>						
Argument	<table> <tr> <td>(i)LONG nWindowNo</td><td>: Screen No. (Specify "-1" for self screen.)</td></tr> <tr> <td>(i)STRING strName</td><td>: Control name</td></tr> <tr> <td>(i)SHORT nItemNum</td><td>: Item No. (1 to 32)</td></tr> </table>	(i)LONG nWindowNo	: Screen No. (Specify "-1" for self screen.)	(i)STRING strName	: Control name	(i)SHORT nItemNum	: Item No. (1 to 32)
(i)LONG nWindowNo	: Screen No. (Specify "-1" for self screen.)						
(i)STRING strName	: Control name						
(i)SHORT nItemNum	: Item No. (1 to 32)						
Return value	Background color						
Details	Gets the background color (item specification).						
Example	<p>Gets the background color of item 3 of GNCGraph00000 on self screen.</p> <pre>LONG BackColor; GCSNCGraphGetGraphBackColor(-1, "GNCGraph00000", 3, BackColor);</pre>						

GCSNCGraphSetScaleColor

Set scale color

Syntax`GCSNCGraphSetScaleColor(nWindowNo, strName, IScaleColor);`**Argument**

(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name
(i)LONG IScaleColor : Scale color

Return value

None

Details

Sets the scale color.

Example

Sets the scale of GNCGraph00000 on self screen to white.

`GCSNCGraphSetScaleColor(-1, "GNCGraph00000", HFFFFFF);`**GCSNCGraphGetScaleColor**

Get scale color

Syntax`GCSNCGraphGetScaleColor(nWindowNo, strName);`**Argument**

(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name

Return value

Scale color

Details

Gets the scale color.

Example

Gets the scale color of GNCGraph00000 on self screen.

`LONG IScaleColor;``IScaleColor = GCSNCGraphGetScaleColor(-1,
"GNCGraph00000");`

GCSNCGraphSetScaleNum	Set scale number
Syntax	<code>GCSNCGraphSetScaleNum(nWindowNo, strName, IScaleNum);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)LONG IScaleNum : Scale number
Return value	None
Details	Sets the scale number.
Example	Sets the scale number of GNCGraph00000 on self screen to 101. <code>GCSNCGraphSetScaleNum(-1, "GNCGraph00000", 101);</code>
GCSNCGraphGetScaleNum	Get scale number
Syntax	<code>GCSNCGraphGetScaleNum(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Scale number
Details	Gets the scale number.
Example	Gets the scale number of GNCGraph00000 on self screen. LONG IScaleNum; IScaleNum = GCSNCGraphGetScaleNum(-1, "GNCGraph00000");

GCSNCGraphSetScaleWidth Set scale width

 Syntax GCSNCGraphSetScaleWidth(nWindowNo, strName,
nScaleWidth);

 Argument (i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name
(i)SHORT nScaleWidth : Scale width

 Return value None

 Details Sets the width of the scale.

 Example Sets the scale width of GNCGraph00000 on self screen to 101.
GCSNCGraphSetScaleWidth(-1, "GNCGraph00000", 101);

GCSNCGraphGetScaleWidth Get scale width

 Syntax GCSNCGraphGetScaleWidth(nWindowNo, strName);

 Argument (i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.)
(i)STRING strName : Control name

 Return value Scale width

 Details Gets the scale width.

 Example Gets the scale width of GNCGraph00000 on self screen.
SHORT nScaleWidth;
nScaleWidth = GCSNCGraphGetScaleWidth(-1,
"GNCGraph00000");

GCSNCGraphSetScaleMin	Set scale (minimum)
Syntax	<code>GCSNCGraphSetScaleMin(nWindowNo, strName, dValue);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)DOUBLE dValue : Scale (minimum)
Return value	None
Details	Sets the scale (minimum) of the chart.
Example	Sets the Scale Min of GNCGraph00000 on self screen to -200.0. <code>GCSNCGraphSetScaleMin(-1, "GNCGraph00000", -200.0);</code>
GCSNCGraphGetScaleMin	Get scale (minimum)
Syntax	<code>GCSNCGraphGetScaleMin(nWindowNo, strName, dValue);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (o)DOUBLE dValue : Scale (minimum)
Return value	None
Details	Gets the scale (minimum) of the chart.
Example	Gets the scale (minimum) of GNCGraph00000 on self screen. DOUBLE dValue; <code>GCSNCGraphGetScaleMin(-1, "GNCGraph00000", dValue);</code>

GCSNCGraphSetScaleMax	Set scale (maximum)
Syntax	<code>GCSNCGraphSetScaleMax(nWindowNo, strName, dValue);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)DOUBLE dValue : Scale (maximum)
Return value	None
Details	Sets the scale (maximum) of the chart.
Example	Sets the Scale Max of GNCGraph00000 on self screen to 201.001. <code>GCSNCGraphSetScaleMax(-1, "GNCGraph00000", 201.001);</code>
GCSNCGraphGetScaleMax	Get scale (maximum)
Syntax	<code>GCSNCGraphGetScaleMax(nWindowNo, strName, dValue);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (o)DOUBLE dValue : Scale (maximum)
Return value	None
Details	Gets the scale (maximum) of the chart.
Example	Gets the scale (maximum) of GNCGraph00000 on self screen. <code>DOUBLE dValue;</code> <code>GCSNCGraphGetScaleMax(-1, "GNCGraph00000", dValue);</code>

GCSNCGraphSetLowerLimit	Set boundary value (lower limit)
Syntax	<code>GCSNCGraphSetLowerLimit(nWindowNo, strName, dValue);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)DOUBLE dValue : Boundary value (lower limit)
Return value	None
Details	Sets the boundary value (lower limit).
Example	Sets the boundary value (lower limit) of GNCGraph00000 on self screen to -1000.123. <code>GCSNCGraphSetLowerLimit(-1, "GNCGraph00000", -1000.123);</code>
GCSNCGraphGetLowerLimit	Get boundary value (lower limit)
Syntax	<code>GCSNCGraphGetLowerLimit(nWindowNo, strName, dValue);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (o)DOUBLE dValue : Boundary value (lower limit)
Return value	None
Details	Gets the boundary value (lower limit).
Example	Gets the boundary value (lower limit) of GNCGraph00000 on self screen. DOUBLE dValue; <code>GCSNCGraphGetLowerLimit(-1, "GNCGraph00000", dValue);</code>

GCSNCGraphSetUpperLimit	Set boundary value (upper limit)
Syntax	GCSNCGraphSetUpperLimit(nWindowNo, strName, dValue);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)DOUBLE dValue : Boundary value (upper limit)
Return value	None
Details	Sets the boundary value (upper limit).
Example	Sets the boundary value (upper limit) of GNCGraph00000 on self screen to 1000.001. GCSNCGraphSetUpperLimit(-1, "GNCGraph00000", 1000.001);

GCSNCGraphGetUpperLimit	Get boundary value (upper limit)
Syntax	GCSNCGraphGetUpperLimit(nWindowNo, strName, dValue);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (o)DOUBLE dValue : Boundary value (upper limit)
Return value	None
Details	Gets the boundary value (upper limit).
Example	Gets the boundary value (upper limit) of GNCGraph00000 on self screen. DOUBLE dValue; GCSNCGraphGetUpperLimit(-1, "GNCGraph00000", dValue);

GCSNCGraphSetSort	Set sort type
Syntax	GCSNCGraphSetSort(nWindowNo, strName, nSort);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nSort : Sort type (0: Specified order, 1: Ascending order, 2: Descending order)
Return value	None
Details	Sets the chart (item) display order.
Example	Sets the short type of GNCGraph00000 on original screen to "1:Ascending order". GCSNCGraphSetSort(-1, "GNCGraph00000", 1);
GCSNCGraphGetSort	Get sort type
Syntax	GCSNCGraphGetSort(nWindowNo, strName);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Sort type
Details	Gets the sort type.
Example	Gets the sort type of GNCGraph00000 on self screen. SHORT nSort; nSort = GCSNCGraphGetSort(-1, "GNCGraph00000");

GCSNCGraphGetData	Get chart item data (reading order)
Syntax	<code>GCSNCGraphGetData(nWindowNo, strName, nItemNum, dValue);</code>
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)SHORT nItemNum : Item No. (1 to 32) (o)DOUBLE dValue : Read data of the specified chart item
Return value	Result 0 : Abnormal 1 : Normal
Details	Specifies the chart item, and gets data read from NC. (Item numbers are specified in the reading order.)
Example	Gets data of graph item 32 of GNCGraph00000 on self screen. <code>DOUBLE dValue; GCSNCGraphGetData(-1, "GNCGraph00000", 32, dValue);</code>

GCSNCGraphSetSystemNumber	Set part system number
Syntax	GCSNCGraphSetSystemNumber(nWindowNo, strName, ISystemNumber);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name (i)LONG ISystemNumber : Part system number
Return value	None
Details	Sets the part system number.
Example	Sets the part system number of GNCGraph00000 on self screen to 1. GCSNCGraphSetSystemNumber(-1, "GNCGraph00000", 1);
GCSNCGraphGetSystemNumber	Get part system number
Syntax	GCSNCGraphGetSystemNumber(nWindowNo, strName);
Argument	(i)LONG nWindowNo : Screen No. (Specify "-1" for self screen.) (i)STRING strName : Control name
Return value	Part system number
Details	Gets the part system number.
Example	Gets the part system number of GNCGraph00000 on self screen. LONG ISystemNumber; ISystemNumber = GCSNCGraphGetSystemNumber(-1, "GNCGraph00000");

5.29 AlarmList

GCSNCAlarmListUpdateHistory	Update alarm history
Syntax	GCSNCAlarmListUpdateHistory(nWindowNo, strName);
Argument	(i)LONG nWindowNo: screen No. (Specify -1 for self screen.) (i)STRING strName: control name
Return value	None
Details	Updates the alarm history.
Example	Updates the GNCAccount00000 alarm history in the self screen. GCSNCAlarmListUpdateHistory(-1, "GNCAccount00000");

GCSNCAListSetDispType	Set display type
 Syntax	<code>GCSNCAListSetDispType(nWindowNo, strName, usType);</code>
 Argument	(i)LONG nWindowNo: screen No. (Specify -1 for self screen.) (i)STRING strName: control name (i)SHORT usType: display type
 Return value	None
 Details	Sets the alarm type to be displayed in the alarm list. 0: NC message 1: Stop code 2: Alarm message 3: Operator message After the alarm type is set, the control area is registered as a redraw area if the display target is alarm list.
 Example	Sets NC message to the GNCAList00000 display type in the self screen. <code>GCSNCAListSetDispType(-1, "GNCAList00000", 0);</code>
GCSNCAListGetDispType	Get display type
 Syntax	<code>GCSNCAListGetDispType(nWindowNo, strName);</code>
 Argument	(i)LONG nWindowNo: screen No. (Specify -1 for self screen.) (i)STRING strName: control name
 Return value	Display type
 Details	Gets the alarm type to be displayed in the alarm list. 0: NC message 1: Stop code 2: Alarm message 3: Operator message
 Example	Gets the GNCAList00000 display type in the self screen. <code>usType = GCSNCAListGetDispType(-1, "GNCAList00000");</code>

GCSNCAlarmListGetSelectLine	Get select line number
Syntax	<code>GCSNCAlarmListGetSelectLine(nWindowNo, strName);</code>
Argument	(i)LONG nWindowNo: Screen No. (Specify "-1" for self screen.) (i)STRING strName: Control name
Return value	Select line number
Details	Gets the select line number in message area. If it is unspecified or out of range, 0 is returned. If page switch is executed with PageUp key or PageDown key after selecting a line, 1 (top line) is returned.
Example	Gets the GNCAccountList00000 select line number in the self screen. <code>SHORT nLine; nLine = GCSNCAlarmListGetSelectLine(-1, "GNCAccountList00000");</code>

GCSNCAListGetAlarmInfo	Get alarm information
Syntax	GCSNCAListGetAlarmInfo(nWindowNo, strName, ISelectLine, IAlarmInfo, Data);
Argument	<ul style="list-style-type: none"> (i)LONG nWindowNo: Screen No. (Specify "-1" for self screen.) (i)STRING strName: Control name (i)LONG ISelectLine: Specify the line number of alarm information to be acquired (i)LONG IAlarmInfo: Specify the item of alarm information to be acquired (o)Variable-type Data: Acquired data
Return value	<ul style="list-style-type: none"> 0: Acquisition failed 1: Acquisition succeeded
Details	<p>Gets the alarm information currently displayed in alarm list or alarm history.</p> <p>For the item of alarm information to be acquired, set the value of the specified bit ON in the table below, and specify the STRING type as the Variable-type Data.</p> <p>To acquire multiple items at the same time, combine the specified bit with a logical sum and set it. In this case, specify the variable name of the character string array with the elements corresponding to the number of items to be acquired in the Variable-type Data.</p>

<Alarm list>

Specified bit	NC message/ Stop code	Alarm message/ Operator message
0	Alarm class	Alarm class
1	Alarm message	Alarm message
2	Parameter 1	Parameter
3	Parameter 2	-
4	Part system	-

<Alarm history>

Specified bit	NC message	Alarm message
0	Date	Date
1	Time	Time
2	Alarm class	Alarm class
3	Alarm message	Alarm message
4	Alarm data 1	Message number
5	Alarm data 2	Classification number
6	Part system	-

 Example	Gets the alarm information currently displayed in GNCAccountList00000 alarm list (first row of NC message) in the self screen. <Acquisition example of single item> Gets the alarm information (Alarm class). <pre>STRING strAlarm; LONG IResult; IResult = GCSNCAlarmListGetAlarmInfo(-1, "GNCAccountList00000", 1, H1, strAlarm); (Example) For "P277 macro alarm message 100", "P277" is returned to strAlarm.</pre>
	 <Acquisition example of several items> Gets the alarm information (Alarm class and Parameter 1). <pre>STRING strInfo(2); LONG IResult; IResult = GCSNCAlarmListGetAlarmInfo(-1, "GNCAccountList00000", 1, H5, strInfo); (Example) For "P277 macro alarm message 100", "P277" is returned to strInfo(0) and "100" is returned to strInfo(1).</pre>

5.30 Extension Menu

GCSNCExMenuSetFontID	Set font resource ID
Syntax	GCSNCExMenuSetFontID (lWindowNo, strName, usID);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usID : font resource ID
Return value	None
Details	Sets the font resource ID.
Example	Sets the GNCExMenu00000 font resource ID in the self screen to 1. GCSNCExMenuSetFontID(-1, "GNCExMenu00000", 1);
GCSNCExMenuGetFontID	Get font resource ID
Syntax	GCSNCExMenuGetFontID (lWindowNo, strName);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Font resource ID
Details	Gets the font resource ID.
Example	Gets the GNCExMenu00000 font resource ID in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetFontID(-1, "GNCExMenu00000");

GCSNCEXMenuGetMenuNumFromPoint		Get menu No. from mouse press position
Syntax	GCSNCEXMenuGetMenuNumFromPoint (IWindowNo, strName, usPointX, usPointY);	
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usPointX : X coordinate of pointing device (i)SHORT usPointY : Y coordinate of pointing device	
Return value	Button No. Menu button No. : 1 to 10 Menu return button : 11 Menu switching button : 12 No press button, or "display status" property is set to other than "full display" : 0	
Details	Gets the menu No. from the mouse press position. The upper left of the control is the origin (0, 0) of the pointing device coordinates.	
Example	Gets the menu No. from the mouse press position in GNCEXMenu00000 in the self screen in Stat. SHORT usX; 'Coordinate X SHORT usY; 'Coordinate Y SHORT Stat; 'Button No. 'Gets coordinate usX = LUPARAM & H0000FFFF; 'Get coordinate X usY = (LUPARAM & HFFFF0000) >> 16; 'Get coordinate Y Stat = GCSNCEXMenuGetMenuNumFromPoint(-1, "GNCEXMenu00000", usX, usY);	

GCSNCExMenuGetDispMenuGroup	Get menu group currently displayed
Syntax	GCSNCExMenuGetDispMenuGroup (IWindowNo, strName);
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	Menu group No. (1 to 10)
Details	Gets the menu group No. currently displayed.
Example	Gets the menu group No. currently displayed in GNCExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetDispMenuGroup(-1, "GNCExMenu00000");

GCSNCEXMenuSetDisplay	Set display type of menu
 Syntax	<code>GCSNCEXMenuSetDisplay (lWindowNo, strName, usMGNNum, usMBNum, ucDType);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)CHAR ucDType : display type
 Return value	None
 Details	Sets the display type of menu. Sets ucDType to one of the following values. 0: Square 1: Image When a setting outside the range is made, the the setting value is not changed..
 Example	Sets the display type of the 1st menu button of GNCEXMenu00000 in the self screen to "Square". <code>GCSNCEXMenuSetDisplay(-1, "GNCEXMenu00000", 1, 1, 0);</code>

GCSNCEXMenuGetDisplay	Get display type of menu
 Syntax	<code>GCSNCEXMenuGetDisplay (lWindowNo, strName, usMGNNum, usMBNum);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)
 Return value	Display type 0: Square 1: Image
 Details	Gets the display type of menu. When a setting outside the range is made, "0: Square" is returned.
 Example	Gets the display type of the 1st menu button of GNCEXMenu00000 in the self screen in Stat. CHAR Stat; <code>Stat = GCSNCEXMenuGetDisplay(-1, "GNCEXMenu00000", 1, 1);</code>

GCSNCExMenuSetUpperMenuOnPattern		Set pattern at the time of upper row menu ON
 Syntax	GCSNCExMenuSetUpperMenuOnPattern (lWindowNo, strName, usMGNNum, nPattern);	
 Argument	<ul style="list-style-type: none">(i)LONG lWindowNo : screen No. (Specify -1 for self screen.)(i)STRING strName : control name(i)SHORT usMGNNum : menu group No. (1 to 10)(i)SHORT nPattern : pattern	
 Return value	None	
 Details	<p>Sets the pattern at the time of the upper row menu ON. One of the following values is set for nPattern</p> <ul style="list-style-type: none">0 : Background painting out1 : Foreground painting out2 to 39 : Pattern 0-3740 : With no painting out <p>When a setting outside the range is made, the setting value is not changed..</p>	
 Example	<p>Sets the pattern at the time of the upper row menu ON to "pattern 0" for menu group 1 of GNCExMenu00000 in the self screen.</p> <pre>GCSNCExMenuSetUpperMenuOnPattern(-1, "GNCExMenu00000", 1, 2);</pre>	

GCSNCExMenuGetUpperMenuOnPattern		Get pattern at the time of upper row menu ON
 Syntax	GCSNCExMenuGetUpperMenuOnPattern (IWindowNo, strName, usMGNNum);	
 Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)	
 Return value	Pattern	
	0 : Background painting out	
	1 : Foreground painting out	
	2 to 39 : Pattern 0-37	
	40 : With no painting out	
 Details	Gets the pattern at the time of the upper row menu ON. When a setting outside the range is made, "0: Background painting out" is returned.	
 Example	Gets the pattern at the time of the upper row menu ON for menu group 1 of GNCExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetUpperMenuOnPattern (-1, "GNCExMenu00000", 1);	

GCSNCExMenuSetLowerMenuOnPattern		Set pattern at the time of lower row menu ON
 Syntax	GCSNCExMenuSetLowerMenuOnPattern (lWindowNo, strName, usMGNNum, nPattern);	
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT nPattern : pattern	
 Return value	None	
 Details	Sets the pattern at the time of the lower row menu ON. One of the following values is set for nPattern. 0 : Background painting out 1 : Foreground painting out 2 to 39 : Pattern 0-37 40 : With no painting out When a setting outside the range is made, the setting value is not changed..	
 Example	Sets the pattern at the time of the lower row menu ON to "pattern 0" for menu group 1 of GNCExMenu00000 in the self screen. GCSNCExMenuSetLowerMenuOnPattern(-1, "GNCExMenu00000", 1, 2);	

GCSNCExMenuGetLowerMenuOnPattern		Get pattern at the time of lower row menu ON
Syntax	GCSNCExMenuGetLowerMenuOnPattern (lWindowNo, strName, usMGNNum);	
Argument	(i)LONG lWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)SHORT usMGNNum	: menu group No. (1 to 10)
Return value	Pattern 0 : Background painting out 1 : Foreground painting out 2 to 39 : Pattern 0-37 40 : With no painting out	
Details	Gets the pattern at the time of the lower row menu ON. When a setting outside the range is made, "0: Background painting out" is returned.	
Example	Gets the pattern at the time of the lower row menu ON for menu group 1 of GNCExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetLowerMenuOnPattern (-1, "GNCExMenu00000", 1);	

GCSNCEExMenuSetUpperMenuOnForeColor	Set foreground color at the time of upper row menu ON
Syntax	<code>GCSNCEExMenuSetUpperMenuOnForeColor (IWindowNo, strName, usMGNNum, IForeColor);</code>
Argument	<ul style="list-style-type: none"> (i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG IForeColor : foreground color
Return value	None
Details	Sets the foreground color at the time of the upper row menu ON. When a setting outside the range is made, the setting value is not changed..
Example	Sets the foreground color at the time of the upper row menu ON to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. <code>GCSNCEExMenuSetUpperMenuOnForeColor(-1, "GNCEExMenu00000", 1, H008000);</code>

GCSNCEExMenuGetUpperMenuOnForeColor	Get foreground color at the time of upper row menu ON
Syntax	<code>GCSNCEExMenuGetUpperMenuOnForeColor (IWindowNo, strName, usMGNNum);</code>
Argument	<ul style="list-style-type: none"> (i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Foreground color
Details	Gets the foreground color at the time of the upper row menu ON. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the foreground color at the time of the upper row menu ON for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; <code>Stat = GCSNCEExMenuGetUpperMenuOnForeColor(-1, "GNCEExMenu00000", 1);</code>

GCSNCEExMenuSetLowerMenuOnForeColor	Set foreground color at the time of lower row menu ON
Syntax	<code>GCSNCEExMenuSetLowerMenuOnForeColor (lWindowNo, strName, usMGNNum, lForeColor);</code>
Argument	<ul style="list-style-type: none"> (i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG lForeColor : foreground color
Return value	None
Details	Sets the foreground color at the time of the lower row menu ON. When a setting outside the range is made, the setting value is not changed..
Example	Sets the foreground color at the time of the lower row menu ON to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. <code>GCSNCEExMenuSetLowerMenuOnForeColor(-1, "GNCEExMenu00000", 1, H008000);</code>

GCSNCEExMenuGetLowerMenuOnForeColor	Get foreground color at the time of lower row menu ON
Syntax	<code>GCSNCEExMenuGetLowerMenuOnForeColor (lWindowNo, strName, usMGNNum);</code>
Argument	<ul style="list-style-type: none"> (i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Foreground color
Details	Gets the foreground color at the time of the lower row menu ON. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the foreground color at the time of the lower row menu ON for menu group 1 in GNCEExMenu00000 of the self screen in Stat. LONG Stat; <code>Stat = GCSNCEExMenuGetLowerMenuOnForeColor (-1, "GNCEExMenu00000", 1);</code>

GCSNCEExMenuSetUpperMenuOnBackColor	Set background color at the time of upper row menu ON
Syntax	GCSNCEExMenuSetUpperMenuOnBackColor (lWindowNo, strName, usMGNNum, lBackColor);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG lBackColor : background color
Return value	None
Details	Sets the background color at the time of the upper row menu ON. When a setting outside the range is made, the setting value is not changed..
Example	Sets the background color at the time of the upper row menu ON to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. GCSNCEExMenuSetUpperMenuOnBackColor (-1, "GNCEExMenu00000", 1, H008000);

GCSNCEExMenuGetUpperMenuOnBackColor	Get background color at the time of upper row menu ON
Syntax	GCSNCEExMenuGetUpperMenuOnBackColor (lWindowNo, strName, usMGNNum);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Background color
Details	Gets the background color at the time of the upper row menu ON. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the background color at the time of the upper row menu ON for menu group 1 of GNCEExMenu00000 in the self screen in Stat LONG Stat; Stat = GCSNCEExMenuGetUpperMenuOnBackColor (-1, "GNCEExMenu00000", 1);

GCSNCEExMenuSetLowerMenuOnBackColor	Set background color at the time of lower row menu ON
Syntax	GCSNCEExMenuSetLowerMenuOnBackColor (lWindowNo, strName, usMGNNum, lBackColor);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG lBackColor : background color
Return value	None
Details	Sets the background color at the time of the lower row menu ON. When a setting outside the range is made, the setting value is not changed..
Example	Sets the background color at the time of the lower row menu ON to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. GCSNCEExMenuSetLowerMenuOnBackColor (-1, "GNCEExMenu00000", 1, H008000);

GCSNCEExMenuGetLowerMenuOnBackColor	Get background color at the time of lower row menu ON
Syntax	GCSNCEExMenuGetLowerMenuOnBackColor (lWindowNo, strName, usMGNNum);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Background color
Details	Gets the background color at the time of the lower row menu ON. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the background color at the time of the lower row menu ON for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; Stat = GCSNCEExMenuGetLowerMenuOnBackColor (-1, "GNCEExMenu00000", 1);

GCSNCExMenuSetMenuOnImage	Set image ID at the time of menu ON
 Syntax	<code>GCSNCExMenuSetMenuOnImage (lWindowNo, strName, usMGNNum, usMBNum, usImageID);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT usImageID : image ID
 Return value	None
 Details	Sets the image ID at the time of the menu ON. One of the following values is set for usImageID. 0 : No image 1 or later : User definition image ID When a setting outside the range is made, the setting value is not changed..
 Example	Sets the image ID at the time of ON for the GNCExMenu00000 1st menu button in the self screen to "1". <code>GCSNCExMenuSetMenuOnImage(-1, "GNCExMenu00000", 1, 1, 1);</code>

GCSNCExMenuGetMenuOnImage	Get image ID at the time of menu ON
 Syntax	<code>GCSNCExMenuGetMenuOnImage (lWindowNo, strName, usMGNNum, usMBNum);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)
 Return value	Image ID 0 : No image 1 or later : User definition image ID
 Details	Gets the image ID at the time of the menu ON. When a setting outside the range is made, "0: No image" is returned.
 Example	Gets the image ID at the time of ON for the GNCExMenu00000 1st menu button in the self screen in Stat. SHORT Stat; <code>Stat = GCSNCExMenuGetMenuOnImage(-1, "GNCExMenu00000", 1, 1);</code>

GCSNCEExMenuSetUpperMenuOnStringColor	Set character color at the time of upper row menu ON
Syntax	GCSNCEExMenuSetUpperMenuOnStringColor (lWindowNo, strName, usMGNNum, lStrColor);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG lStrColor : character color
Return value	None
Details	Sets the character color at the time of the upper row menu ON. When a setting outside the range is made, the setting value is not changed..
Example	Sets the character color at the time of upper row menu ON to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. GCSNCEExMenuSetUpperMenuOnStringColor(-1, "GNCEExMenu00000", 1, H008000)

GCSNCEExMenuGetUpperMenuOnStringColor	Get character color at the time of upper row menu ON
Syntax	GCSNCEExMenuGetUpperMenuOnStringColor (lWindowNo, strName, usMGNNum);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Character color
Details	Gets the character color at the time of the upper row menu ON. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the character color at the time of upper row menu ON for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; Stat = GCSNCEExMenuGetUpperMenuOnStringColor(-1, "GNCEExMenu00000", 1);

GCSNCEExMenuSetLowerMenuOnStringColor	Set character color at the time of lower row menu ON
Syntax	GCSNCEExMenuSetLowerMenuOnStringColor (IWindowNo, strName, usMGNNum, IStrColor);
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG IStrColor : character color
Return value	None
Details	Sets the character color at the time of the lower row menu ON. When a setting outside the range is made, the setting value is not changed..
Example	Sets the character color at the time of lower row menu ON to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. GCSNCEExMenuSetLowerMenuOnStringColor (-1, "GNCEExMenu00000", 1, H008000);

GCSNCEExMenuGetLowerMenuOnStringColor	Get character color at the time of lower row menu ON
Syntax	GCSNCEExMenuGetLowerMenuOnStringColor (IWindowNo, strName, usMGNNum);
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Character color
Details	Gets the character color at the time of the lower row menu ON. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the character color at the time of lower row menu ON for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; Stat = GCSNCEExMenuGetLowerMenuOnStringColor (-1, "GNCEExMenu00000", 1);

GCSNCExMenuSetUpperMenuOffPattern	Set pattern at the time of upper row menu OFF
 Syntax	<code>GCSNCExMenuSetUpperMenuOffPattern (lWindowNo, strName, usMGNNum, nPattern);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT nPattern : pattern setting value
 Return value	None
 Details	Sets the pattern at the time of the upper row menu OFF. One of the following values is set for nPattern. 0 : Background painting out 1 : Foreground painting out 2 to 39 : Pattern 0-37 40 : With no painting out When a setting outside the range is made, the setting value is not changed..
 Example	Sets the pattern at the time of the upper row menu OFF to pattern "0" for menu group 1 of GNCExMenu00000 in the self screen. <code>GCSNCExMenuSetUpperMenuOffPattern(-1, "GNCExMenu00000", 1, 2);</code>

GCSNCExMenuGetUpperMenuOffPattern	Get pattern at the time of upper row menu OFF
 Syntax	<code>GCSNCExMenuGetUpperMenuOffPattern (lWindowNo, strName, usMGNNum);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
 Return value	Pattern 0 : Background painting out 1 : Foreground painting out 2 to 39 : Pattern 0-37 40 : With no painting out
 Details	Gets the pattern at the time of the upper row menu OFF. When a setting outside the range is made, "0: Background painting out" is returned.
 Example	Gets the pattern at the time of the upper row menu OFF for menu group 1 of GNCExMenu00000 in the self screen in Stat. SHORT Stat; <code>Stat = GCSNCExMenuGetUpperMenuOffPattern(-1, "GNCExMenu00000", 1);</code>

GCSNCEExMenuSetLowerMenuOffPattern	Set pattern at the time of lower row menu OFF
 Syntax	<code>GCSNCEExMenuSetLowerMenuOffPattern (lWindowNo, strName, usMGNNum, nPattern);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT nPattern : pattern setting value
 Return value	None
 Details	<p>Sets the pattern at the time of the lower row menu OFF.</p> <p>One of the following values is set for nPattern.</p> <ul style="list-style-type: none"> 0 : Background painting out 1 : Foreground painting out 2 to 39 : Pattern 0-37 40 : With no painting out <p>When a setting outside the range is made, the setting value is not changed..</p>
 Example	<p>Sets the pattern at the time of the lower row menu OFF to pattern "0" for menu group 1 of GNCEExMenu00000 in the self screen.</p> <pre>GCSNCEExMenuSetLowerMenuOffPattern (-1, "GNCEExMenu00000", 1, 2);</pre>

GCSNCEExMenuGetLowerMenuOffPattern	Get pattern at the time of lower row menu OFF
 Syntax	<code>GCSNCEExMenuGetLowerMenuOffPattern (lWindowNo, strName, usMGNNum);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
 Return value	<p>Pattern</p> <ul style="list-style-type: none"> 0 : Background painting out 1 : Foreground painting out 2 to 39 : Pattern 0-37 40 : With no painting out
 Details	<p>Gets the pattern at the time of the lower row menu OFF.</p> <p>When a setting outside the range is made, "0: Background painting out" is returned.</p>
 Example	<p>Gets the pattern at the time of the lower row menu OFF for menu group 1 of GNCEExMenu00000 in the self screen in Stat.</p> <p>SHORT Stat;</p> <pre>Stat = GCSNCEExMenuGetLowerMenuOffPattern (-1, "GNCEExMenu00000", 1);</pre>

GCSNCEExMenuSetUpperMenuOffForeColor	Set foreground color at the time of upper row menu OFF
Syntax	<code>GCSNCEExMenuSetUpperMenuOffForeColor (IWindowNo, strName, usMGNNum, IForeColor);</code>
Argument	<ul style="list-style-type: none"> (i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG IForeColor : foreground color
Return value	None
Details	Sets the foreground color at the time of the upper row menu OFF. When a setting outside the range is made, the setting value is not changed..
Example	Sets the foreground color at the time of the upper row menu OFF to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. <code>GCSNCEExMenuSetUpperMenuOffForeColor(-1, "GNCEExMenu00000", 1, H008000);</code>

GCSNCEExMenuGetUpperMenuOffForeColor	Get foreground color at the time of upper row menu OFF
Syntax	<code>GCSNCEExMenuGetUpperMenuOffForeColor (IWindowNo, strName, usMGNNum);</code>
Argument	<ul style="list-style-type: none"> (i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Foreground color
Details	Gets the foreground color at the time of the upper row menu OFF. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the foreground color at the time of the upper row menu OFF for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; <code>Stat = GCSNCEExMenuGetUpperMenuOffForeColor(-1, "GNCEExMenu00000", 1);</code>

GCSNCEExMenuSetLowerMenuOffForeColor	Set foreground color at the time of lower row menu OFF
Syntax	<code>GCSNCEExMenuSetLowerMenuOffForeColor (IWindowNo, strName, usMGNNum, IForeColor);</code>
Argument	<ul style="list-style-type: none"> (i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG IForeColor : foreground color
Return value	None
Details	Sets the foreground color at the time of the lower row menu OFF. When a setting outside the range is made, the setting value is not changed..
Example	Sets the foreground color at the time of the lower row menu OFF to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. <code>GCSNCEExMenuSetLowerMenuOffForeColor (-1, "GNCEExMenu00000", 1, H008000);</code>
GCSNCEExMenuGetLowerMenuOffForeColor	Get foreground color at the time of lower row menu OFF
Syntax	<code>GCSNCEExMenuGetLowerMenuOffForeColor (IWindowNo, strName, usMGNNum);</code>
Argument	<ul style="list-style-type: none"> (i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Foreground color
Details	Gets the foreground color at the time of the lower row menu OFF. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the foreground color at the time of the lower row menu OFF for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; <code>Stat = GCSNCEExMenuGetLowerMenuOffForeColor (-1, "GNCEExMenu00000", 1);</code>

GCSNCEExMenuSetUpperMenuOffBackColor	Set background color at the time of upper row menu OFF
Syntax	GCSNCEExMenuSetUpperMenuOffBackColor (lWindowNo, strName, usMGNNum, lBackColor);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG lBackColor : background color
Return value	None
Details	Sets the background color at the time of the upper row menu OFF. When a setting outside the range is made, the setting value is not changed..
Example	Sets the background color at the time of the upper row menu OFF to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. GCSNCEExMenuSetUpperMenuOffBackColor (-1, "GNCEExMenu00000", 1, H008000);

GCSNCEExMenuGetUpperMenuOffBackColor	Get background color at the time of upper row menu OFF
Syntax	GCSNCEExMenuGetUpperMenuOffBackColor (lWindowNo, strName, usMGNNum);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Background color
Details	Gets the background color at the time of the upper row menu OFF. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the background color at the time of the upper row menu OFF for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; Stat = GCSNCEExMenuGetUpperMenuOffBackColor (-1, "GNCEExMenu00000", 1);

GCSNCEExMenuSetLowerMenuOffBackColor	Set background color at the time of lower row menu OFF
Syntax	GCSNCEExMenuSetLowerMenuOffBackColor (IWindowNo, strName, usMGNNum, IBackColor);
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG IBackColor : background color
Return value	None
Details	Sets the background color at the time of the lower row menu OFF. When a setting outside the range is made, the setting value is not changed..
Example	Sets the background color at the time of the lower row menu OFF to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. <code>GCSNCEExMenuSetLowerMenuOffBackColor (-1, "GNCEExMenu00000", 1, H008000);</code>

GCSNCEExMenuGetLowerMenuOffBackColor	Get background color at the time of lower row menu OFF
Syntax	GCSNCEExMenuGetLowerMenuOffBackColor (IWindowNo, strName, usMGNNum);
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Background color
Details	Gets the background color at the time of the lower row menu OFF. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the background color at the time of the lower row menu OFF for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; <code>Stat = GCSNCEExMenuGetLowerMenuOffBackColor (-1, "GNCEExMenu00000", 1);</code>

GCSNCExMenuSetMenuOffImage	Set image ID at the time of menu OFF
 Syntax	<code>GCSNCExMenuSetMenuOffImage (lWindowNo, strName, usMGNNum, usMBNum, usImageID);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT usImageID : Image ID
 Return value	None
 Details	<p>Sets the image ID at the time of the menu OFF. One of the following values is set for usImageID.</p> <ul style="list-style-type: none"> 0 : No image 1 or later : User definition image ID <p>When a setting outside the range is made, the setting value is not changed..</p>
 Example	<p>Sets the image ID at the time of OFF for the GNCExMenu00000 1st menu button in the self screen to "1".</p> <pre>GCSNCExMenuSetMenuOffImage(-1, "GNCExMenu00000", 1, 1, 1);</pre>

GCSNCExMenuGetMenuOffImage	Get image ID at the time of menu OFF
 Syntax	<code>GCSNCExMenuGetMenuOffImage (lWindowNo, strName, usMGNNum, usMBNum);</code>
 Argument	<ul style="list-style-type: none"> (i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)
 Return value	<ul style="list-style-type: none"> Image ID 0 : No image 1 or later : User definition image ID
 Details	<p>Gets the image ID at the time of the menu OFF. When a setting outside the range is made, "0: No image" is returned.</p>
 Example	<p>Gets the image ID at the time of OFF for the GNCExMenu00000 1st menu button in the self screen in Stat.</p> <p>SHORT Stat; Stat = GCSNCExMenuGetMenuOffImage(-1, "GNCExMenu00000", 1, 1);</p>

GCSNCEMenuSetUpperMenuOffStringColor	Set character color at the time of upper row menu OFF
Syntax	<code>GCSNCEMenuSetUpperMenuOffStringColor (IWindowNo, strName, usMGNNum, IStrColor);</code>
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG IStrColor : character color
Return value	None
Details	Sets the character color at the time of the upper row menu OFF. When a setting outside the range is made, the setting value is not changed..
Example	Sets the character color at the time of the upper row menu OFF to (green: H008000) for menu group 1 of GNCEMenu00000 in the self screen. <code>GCSNCEMenuSetUpperMenuOffStringColor (-1, "GNCEMenu00000", 1, H008000);</code>

GCSNCEMenuGetUpperMenuOffStringColor	Get character color at the time of upper row menu OFF
Syntax	<code>GCSNCEMenuGetUpperMenuOffStringColor (IWindowNo, strName, usMGNNum);</code>
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Character color
Details	Gets the character color at the time of the upper row menu OFF. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the character color at the time of the upper row menu OFF for menu group 1 of GNCEMenu00000 in the self screen. LONG Stat; Stat = GCSNCEMenuGetUpperMenuOffStringColor(-1, "GNCEMenu00000", 1);

GCSNCEExMenuSetLowerMenuOffStringColor	Set character color at the time of lower row menu OFF
Syntax	GCSNCEExMenuSetLowerMenuOffStringColor (IWindowNo, strName, usMGNNum, IStrColor);
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)LONG IStrColor : character color
Return value	None
Details	Sets the character color at the time of the lower row menu OFF. When a setting outside the range is made, the setting value is not changed..
Example	Sets the character color at the time of the lower row menu OFF to (green: H008000) for menu group 1 of GNCEExMenu00000 in the self screen. GCSNCEExMenuSetLowerMenuOffStringColor (-1, "GNCEExMenu00000", 1, H008000);

GCSNCEExMenuGetLowerMenuOffStringColor	Get character color at the time of lower row menu OFF
Syntax	GCSNCEExMenuGetLowerMenuOffStringColor (IWindowNo, strName, usMGNNum);
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Character color
Details	Gets the character color at the time of the lower row menu OFF. When a setting outside the range is made, "0: Black" is returned.
Example	Gets the character color at the time of the lower row menu OFF for menu group 1 of GNCEExMenu00000 in the self screen in Stat. LONG Stat; Stat = GCSNCEExMenuGetLowerMenuOffStringColor (-1, "GNCEExMenu00000", 1);

GCSNCExMenuSetMenuAction		Set button operations of menu
 Syntax	GCSNCExMenuSetMenuAction (lWindowNo, strName, usMGNNum, usMBNum, usAction);	
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT usAction : button operation	
 Return value	None	
 Details	Sets the button operation of the menu. One of the following values is set for usAction. 0: No operation 1: Momentary 2: Alternate 3: Button group 1 4: Button group 2 5: Button group 3 6: Button group 4 7: Button group 5 When a setting outside the range is made, the setting value is not changed..	
 Example	Sets the button operation of the 1st menu button of GNCExMenu00000 in the self screen to "Momentary". GCSNCExMenuSetMenuAction(-1, "GNCExMenu00000", 1, 1, 1);	

GCSNCExMenuGetMenuAction		Get button operations of menu
 Syntax	GCSNCExMenuGetMenuAction (lWindowNo, strName, usMGNNum, usMBNum);	
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)	
 Return value	Button operation 0: No operation 1: Momentary 2: Alternate 3: Button group 1 4: Button group 2 5: Button group 3 6: Button group 4 7: Button group 5	
 Details	Gets the button operation of the menu. When a setting outside the range is made, "0: No operation" is returned.	
 Example	Gets the button operation of the 1st menu button of GNCExMenu00000 in the self screen in Stat; SHORT Stat; Stat = GCSNCExMenuGetMenuAction(-1, "GNCExMenu00000", 1, 1);	

GCSNCEExMenuSetMenuString	Set character string of menu
Syntax	GCSNCEExMenuSetMenuString (lWindowNo, strName, usMGNNum, usMBNum, strMenu);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)STRING strMenu : character string
Return value	None
Details	Sets the character string of the menu. When a setting outside the range is made, the setting value is not changed..
Example	Sets the character string of the 1st menu button of GNCEExMenu00000 in the self screen to "MENU1". GCSNCEExMenuSetMenuString(-1, "GNCEExMenu00000", 1, 1, "MENU1");

GCSNCEExMenuGetMenuString	Get character string of menu
Syntax	GCSNCEExMenuGetMenuString (lWindowNo, strName, usMGNNum, usMBNum);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)
Return value	Character string
Details	Gets the character string of the menu. When a setting outside the range is made, null character is returned.
Example	Gets the character string of the 1st menu button of GNCEExMenu00000 in the self screen in Stat. STRING Stat; Stat = GCSNCEExMenuGetMenuString(-1, "GNCEExMenu00000", 1, 1);

GCSNCEExMenuSetMenuStringID	Set character string resource ID of menu
Syntax	<code>GCSNCEExMenuSetMenuStringID (lWindowNo, strName, usMGNNum, usMenuStrID);</code>
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMenuStrID : character string resource ID
Return value	None
Details	Sets the character string resource ID of menu. (Sets ten designated menu group buttons) When a setting outside the range is made, the setting value is not changed..
Example	Sets the character string resource ID to "1" for menu group 1 of GNCEExMenu00000 in the self screen. <code>GCSNCEExMenuSetMenuStringID(-1, "GNCEExMenu00000", 1, 1);</code>

GCSNCEExMenuGetMenuStringID	Get character string resource ID of menu
Syntax	<code>GCSNCEExMenuGetMenuStringID (lWindowNo, strName, usMGNNum);</code>
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Character resource ID
Details	Gets the character string resource ID of menu. When a setting outside the range is made, "0" is returned.
Example	Gets the character string resource ID for menu group 1 of GNCEExMenu00000 in the self screen in Stat. <code>SHORT Stat; Stat = GCSNCEExMenuGetMenuStringID(-1, "GNCEExMenu00000", 1);</code>

GCSNCExMenuSetMenuPageAction		Set screen switch operation
 Syntax	GCSNCExMenuSetMenuPageAction (lWindowNo, strName, usMGNNum, usMBNum, usPageAction);	
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT usPageAction : Screen switch operation	
 Return value	None	
 Details	<p>Sets the screen switch operation. One of the following values is set for usPageAction.</p> <p>0: None 1: Open Panel 2: Open Window 3: Close Window 4: ON: Open win., OFF: Close win. 5: ON: Close win., OFF: Open win. When a setting outside the range is made, the setting value is not changed..</p>	
 Example	<p>Sets the screen switch operation setting value of the 1st menu button of GNCExMenu00000 in the self screen to "4".</p> <p>GCSNCExMenuSetMenuPageAction(-1, "GNCExMenu00000", 1, 4);</p>	

GCSNCExMenuGetMenuPageAction Get screen switch operation	
Syntax	GCSNCExMenuGetMenuPageAction (lWindowNo, strName, usMGNNum, usMBNum);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)
Return value	Screen switch operations 0: None 1: Open Panel 2: Open Window 3: Close Window 4: ON: Open win., OFF: Close win. 5: ON: Close win., OFF: Open win.
Details	Gets the screen switch operation. When a setting outside the range is made, "0: None" is returned.
Example	Gets the screen switch operation setting value of the 1st menu button of GNCExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetMenuPageAction(-1, "GNCExMenu00000", 1, 1);

GCSNCEExMenuSetMenuPageNum	Set Panel/Window number
 Syntax	<code>GCSNCEExMenuSetMenuPageNum (lWindowNo, strName, usMGNNum, usMBNum, nPageNum);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT nPageNum : setting value of Panel/Window No.
 Return value	None
 Details	Sets the Panel/Window number. When a setting outside the range is made, the setting value is not changed..
 Example	Sets the Panel/Window number setting value of the 1st menu button of GNCEExMenu00000 in the self screen to "1". <code>GCSNCEExMenuSetMenuPageNum(-1, "GNCEExMenu00000", 1, 1, 1);</code>

GCSNCEExMenuGetMenuPageNum	Get Panel/Window number
 Syntax	<code>GCSNCEExMenuGetMenuPageNum (lWindowNo, strName, usMGNNum, usMBNum);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)
 Return value	Panel/Window number
 Details	Gets the Panel/Window number. When a setting outside the range is made, "0" is returned.
 Example	Gets the Panel/Window number setting value of the 1st menu button of GNCEExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCEExMenuGetMenuPageNum(-1, "GNCEExMenu00000", 1, 1);

GCSNCEExMenuSetMenuStatus	Set menu button status
 Syntax	<code>GCSNCEExMenuSetMenuStatus (lWindowNo, strName, usMGNNum, usMBNum, usStatus);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT usStatus : menu button status
 Return value	None
 Details	Sets the menu button status. One of the following values is set for usStatus. 0: OFF status 1: ON status When a setting outside the range is made, the setting value is not changed..
 Example	Sets the menu button status setting value of the 1st menu button of GNCEExMenu00000 in the self screen to "ON status". <code>GCSNCEExMenuSetMenuStatus(-1, "GNCEExMenu00000", 1, 1, 1);</code>

GCSNCEExMenuGetMenuStatus	Get menu button status
 Syntax	<code>GCSNCEExMenuGetMenuStatus (lWindowNo, strName, usMGNNum, usMBNum);</code>
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10)
 Return value	Menu button status 0: OFF status 1: ON status
 Details	Gets the menu button status. When a setting outside the range is made, "0: OFF status" is returned.
 Example	Gets the menu button status setting value of the 1st menu button of GNCEExMenu00000 in the self screen in Stat. SHORT Stat; <code>Stat = GCSNCEExMenuGetMenuStatus(-1, "GNCEExMenu00000", 1, 1);</code>

GCSNCEExMenuSetMenuViewStatus	Set display status of menu										
 Syntax	<code>GCSNCEExMenuSetMenuViewStatus (IWindowNo, strName, usMGNNum, usMBNum, usViewSts);</code>										
 Argument	<table> <tr> <td>(i)LONG IWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i)STRING strName</td><td>: control name</td></tr> <tr> <td>(i)SHORT usMGNNum</td><td>: menu group No. (1 to 10)</td></tr> <tr> <td>(i)SHORT usMBNum</td><td>: menu button No. (1 to 10)</td></tr> <tr> <td>(i)SHORT usViewSts</td><td>: setting value of display status</td></tr> </table>	(i)LONG IWindowNo	: screen No. (Specify -1 for self screen.)	(i)STRING strName	: control name	(i)SHORT usMGNNum	: menu group No. (1 to 10)	(i)SHORT usMBNum	: menu button No. (1 to 10)	(i)SHORT usViewSts	: setting value of display status
(i)LONG IWindowNo	: screen No. (Specify -1 for self screen.)										
(i)STRING strName	: control name										
(i)SHORT usMGNNum	: menu group No. (1 to 10)										
(i)SHORT usMBNum	: menu button No. (1 to 10)										
(i)SHORT usViewSts	: setting value of display status										
 Return value	None										
 Details	<p>Sets the display status of the menu.</p> <p>One of the following values is set for usViewSts.</p> <ul style="list-style-type: none"> 0: Hide 1: Partial display 2: Whole display 3: Invalid display <p>When a setting outside the range is made, the setting value is not changed..</p>										
 Example	<p>Sets the display status setting value of the 1st menu button of GNCEExMenu00000 in the self screen to "Invalid display".</p> <pre>GCSNCEExMenuSetMenuViewStatus(-1, "GNCEExMenu00000", 1, 1, 3);</pre>										

GCSNCEExMenuGetMenuViewStatus	Get display status of menu								
 Syntax	<code>GCSNCEExMenuGetMenuViewStatus (IWindowNo, strName, usMGNNum, usMBNum);</code>								
 Argument	<table> <tr> <td>(i)LONG IWindowNo</td><td>: screen No. (Specify -1 for self screen.)</td></tr> <tr> <td>(i)STRING strName</td><td>: control name</td></tr> <tr> <td>(i)SHORT usMGNNum</td><td>: menu group No. (1 to 10)</td></tr> <tr> <td>(i)SHORT usMBNum</td><td>: menu button No. (1 to 10)</td></tr> </table>	(i)LONG IWindowNo	: screen No. (Specify -1 for self screen.)	(i)STRING strName	: control name	(i)SHORT usMGNNum	: menu group No. (1 to 10)	(i)SHORT usMBNum	: menu button No. (1 to 10)
(i)LONG IWindowNo	: screen No. (Specify -1 for self screen.)								
(i)STRING strName	: control name								
(i)SHORT usMGNNum	: menu group No. (1 to 10)								
(i)SHORT usMBNum	: menu button No. (1 to 10)								
 Return value	<p>Display status</p> <ul style="list-style-type: none"> 0: Hide 1: Partial display 2: Whole display 3: Invalid display 								
 Details	<p>Gets the display status of the menu.</p> <p>When a setting outside the range is made, "0: Hide" is returned.</p>								
 Example	<p>Gets the display status setting value of the 1st menu button of GNCEExMenu00000 in the self screen in Stat.</p> <pre>SHORT Stat;</pre> <pre>Stat = GCSNCEExMenuGetMenuViewStatus(-1, "GNCEExMenu00000", 1, 1);</pre>								

GCSNCExMenuSetMenuStringPosition		Set character string display position of menu
 Syntax	GCSNCExMenuSetMenuStringPosition (lWindowNo, strName, usMGNNum, ucHPosition, ucVPosition);	
 Argument	<ul style="list-style-type: none">(i)LONG lWindowNo : screen No. (Specify -1 for self screen.)(i)STRING strName : control name(i)SHORT usMGNNum : menu group No. (1 to 10)(i)CHAR ucHPosition : horizontal position(i)CHAR ucVPosition : vertical position	
 Return value	None	
 Details	<p>Sets the character string display position of the menu. One of the following values is set for ucHPosition. 0: Align left 1: Center 2: Align right One of the following values is set for ucVPosition. 0: Align top 1: Center 2: Align bottom When a setting outside the range is made, the setting value is not changed..</p>	
 Example	<p>Sets the character string display position of the menu for menu group 1 of GNCExMenu00000 in the self screen to "Align left" for horizontal position, and to "Center" for vertical position.</p> <pre>GCSNCExMenuSetMenuStringPosition(-1, "GNCExMenu00000", 1, 0, 1);</pre>	

GCSNCExMenuGetStringPosition		Get character string display position of menu
 Syntax	GCSNCExMenuGetStringPosition (IWindowNo, strName, usMGNu, memHPosition, memVPosition);	
 Argument	(i)LONG IWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)SHORT usMGNu	: menu group No. (1 to 10)
	(o)GMEM memHPosition	: reservation of global memory area to store horizontal position : CHAR(1)
	(o)GMEM memVPosition	: reservation of global memory area to store vertical position : CHAR(1)
 Return value	None	
 Details	<p>Gets the character string display position of the menu.</p> <p>Gets one of the following values for memHPosition.</p> <p>Horizontal position</p> <ul style="list-style-type: none"> 0: Align left 1: Center 2: Align right <p>Gets one of the following values for memVPosition.</p> <p>Vertical position</p> <ul style="list-style-type: none"> 0: Align top 1: Center 2: Align bottom <p>When a setting outside the range is made, "1: Center" is returned for horizontal position and vertical position.</p>	
 Example	<p>Gets the character string display position of the menu for menu group 1 of GNCExMenu00000 in the self screen to "memHPos" for horizontal position, and to "memVPos" for vertical position.</p> <pre>CHAR cHPos; 'Horizontal position CHAR cVPos; 'Vertical position GMEM memHPos; GMEM memVPos; memHPos = GMEMCreate("MEMHPOS", 1); memVPos = GMEMCreate("MEMVPOS", 1); GCSNCExMenuGetStringPosition(-1, "GNCExMenu00000", 1, memHPos, memVPos); cHPos = GMEMGetChar(memHPos, 0); cVPos = GMEMGetChar(memVPos, 0); GMEMDelete(memHPos); GMEMDelete(memVPos);</pre>	

GCSNCEExMenuSetUpperMenuGroupNum		Set upper row menu group number
 Syntax	GCSNCEExMenuSetUpperMenuGroupNum (lWindowNo, strName, usMGNNum, usSetMGNNum);	
 Argument	(i)LONG lWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)SHORT usMGNNum	: menu group No. (1 to 10)
	(i)SHORT usSetMGNNum	: upper row menu group number (0 to 10)
 Return value	None	
 Details	Sets the menu group number of the upper row in the two-row display. One of the following values is set for usSetMGNNum. 0 : Hide upper row menu 1 to 10 : Displays the specified group number menu to the upper row When a setting outside the range is made, the setting value is not changed..	
 Example	Sets the upper row menu group number to "2" for menu group 1 of GNCEExMenu00000 in the self screen. GCSNCEExMenuSetUpperMenuGroupNum(-1, "GNCEExMenu00000", 1, 2);	

GCSNCExMenuGetUpperMenuGroupNum	Get upper row menu group number
Syntax	GCSNCExMenuGetUpperMenuGroupNum (lWindowNo, strName, usMGNNum);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)
Return value	Upper row menu group number 0 : Hide upper row menu 1 to 10 : Menu group number specified to the upper row menu
Details	Gets the menu group number of the upper row in the two-row display. When a setting outside the range is made, "0" is returned.
Example	Gets the upper row menu group number for menu group 1 of GNCExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetUpperMenuGroupNum(-1, "GNCExMenu00000", 1);

GCSNCExMenuSetNextMenuGroupNum		Set destination menu group number				
 Syntax	GCSNCExMenuSetNextMenuGroupNum (lWindowNo, strName, usMGNNum, usMBNum, usSetMGNNum);					
 Argument	(i)LONG lWindowNo	: screen No. (Specify -1 for self screen.)				
	(i)STRING strName	: control name				
	(i)SHORT usMGNNum	: menu group No. (1 to 10) return button, switch button, right-flick, left-flick : 0				
	(i)SHORT usMBNum	: menu button No. (1 to 10) return button : 11 switch button, right-flick : 12 left-flick : 13				
	(i)SHORT usSetMGNNum	: destination menu group number (0 to 10)				
 Return value	None					
 Details	<p>Sets the destination menu group number. One of the following values is set for usSetMGNNum.</p> <table> <tr> <td>0</td><td>: No movement</td></tr> <tr> <td>1 to 10</td><td>: Display the designated group number menu. When a setting outside the range is made, the setting value is not changed..</td></tr> </table>		0	: No movement	1 to 10	: Display the designated group number menu. When a setting outside the range is made, the setting value is not changed..
0	: No movement					
1 to 10	: Display the designated group number menu. When a setting outside the range is made, the setting value is not changed..					
 Example	<p>Sets the destination menu group number of the 1st menu button of GNCExMenu00000 in the self screen to "2".</p> <pre>GCSNCExMenuSetNextMenuGroupNum(-1, "GNCExMenu00000", 1, 1, 2);</pre>					

GCSNCExMenuGetNextMenuGroupNum		Get destination menu group number												
 Syntax	GCSNCExMenuGetNextMenuGroupNum (lWindowNo, strName, usMGNNum, usMBNum);													
 Argument	<table><tr><td>(i)LONG lWindowNo</td><td>:</td><td>screen No. (Specify -1 for self screen.)</td></tr><tr><td>(i)STRING strName</td><td>:</td><td>control name</td></tr><tr><td>(i)SHORT usMGNNum</td><td>:</td><td>menu group No. (1 to 10) return button, switch button, right-flick, left-flick : 0</td></tr><tr><td>(i)SHORT usMBNum</td><td>:</td><td>menu button No. (1 to 10) return button : 11 switch button, right-flick : 12 left-flick : 13</td></tr></table>		(i)LONG lWindowNo	:	screen No. (Specify -1 for self screen.)	(i)STRING strName	:	control name	(i)SHORT usMGNNum	:	menu group No. (1 to 10) return button, switch button, right-flick, left-flick : 0	(i)SHORT usMBNum	:	menu button No. (1 to 10) return button : 11 switch button, right-flick : 12 left-flick : 13
(i)LONG lWindowNo	:	screen No. (Specify -1 for self screen.)												
(i)STRING strName	:	control name												
(i)SHORT usMGNNum	:	menu group No. (1 to 10) return button, switch button, right-flick, left-flick : 0												
(i)SHORT usMBNum	:	menu button No. (1 to 10) return button : 11 switch button, right-flick : 12 left-flick : 13												
 Return value	<table><tr><td colspan="2">Destination menu group number.</td></tr><tr><td>0</td><td>:</td><td>No movement</td></tr><tr><td>1 to 10</td><td>:</td><td>Display the designated group number menu.</td></tr></table>		Destination menu group number.		0	:	No movement	1 to 10	:	Display the designated group number menu.				
Destination menu group number.														
0	:	No movement												
1 to 10	:	Display the designated group number menu.												
 Details	<p>Gets the destination menu group number. When a setting outside the range is made, "0: No movement" is returned.</p>													
 Example	<p>Gets the destination menu group number of the 1st menu button of GNCExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetNextMenuGroupNum(-1, "GNCExMenu00000", 1, 1);</p>													

GCSNCExMenuChangeMenuGroupNum		Change menu group number to be displayed
 Syntax	GCSNCExMenuChangeMenuGroupNum (lWindowNo, strName, usMGNNum);	
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10)	
 Return value	None	
 Details	Changes the menu group number to be displayed. When a setting outside the range is made, the setting value is not changed.. (Note) The upper row menu displays the group set in the "upper row menu group number" property of the designated menu group number.	
 Example	Changes the menu group currently displayed in GNCExMenu00000 in the self screen to "menu group 1". GCSNCExMenuChangeMenuGroupNum(-1, "GNCExMenu00000", 1);	

GCSNCEExMenuSetOpeMessage	Set operation message (designate character string)
---------------------------	--

Syntax	GCSNCEExMenuSetOpeMessage (lWindowNo, strName, strOpeMessage);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)STRING strOpeMessage : operation message character string
Return value	None
Details	Sets operation messages using character string. Up to 40 characters can be used for strOpeMessage.
Example	Sets the operation message of GNCEExMenu00000 in the self screen to "executing". GCSNCEExMenuSetOpeMessage(-1, "GNCEExMenu00000", "executing");

GCSNCEExMenuSetOpeMessageID	Set operation message (designate resource ID)
-----------------------------	---

Syntax	GCSNCEExMenuSetOpeMessageID (lWindowNo, strName, usOpeMessageString)
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usOpeMessageString : character string resource ID of operation message
Return value	None
Details	Sets operation messages using character string resource ID.
Example	Sets the character string resource ID of the operation message of GNCEExMenu00000 in the self screen to "1". GCSNCEExMenuSetOpeMessageID(-1, "GNCEExMenu00000", 1);

GCSNCExMenuSetMenuDevice Set PLC device	
Syntax	GCSNCExMenuSetMenuDevice (lWindowNo, strName, usMGNum, usMBNum, nIndex, strDevice);
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT nIndex : PLC device index No. 0: Write PLC device 1: Read PLC device (i)STRING strDevice : PLC device character string
Return value	Setting result 0xA001: Menu group No. is not correct. 0xA002: Menu button No. is not correct. 0xA003: PLC device index is not correct. 0xA004: PLC device is not correct. 0x0 : Normal
Details	Sets the PLC device address to allocate to the control.
Example	Sets the write PLC device of the 1st menu button of GNCExMenu00000 in the self screen to PLC device "X0". GCSNCExMenuSetMenuDevice(-1, "GNCExMenu00000", 1, 1, 0, "X0");

GCSNCExMenuGetMenuDevice	Get PLC device
Syntax	GCSNCExMenuGetMenuDevice (lWindowNo, strName, usMGNum, usMBNum, nIndex)
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT nIndex : PLC device index No. 0: Write PLC device 1: Read PLC device
Return value	PLC device character string
Details	Gets the PLC device address allocated to the control. (Note) Gets "X0008" when set to "X0008", and "X8" when set to "X8".
Example	Gets the PLC device character string of write PLC device of the 1st menu button of GNCExMenu00000 in the self screen in Stat; STRING Stat; Stat = GCSNCExMenuGetMenuDevice(-1, "GNCExMenu00000", 1, 1, 0);

GCSNCExMenuSetMenuDeviceEnable		Set PLC device enabled
 Syntax		GCSNCExMenuSetMenuDeviceEnable (lWindowNo, strName, usMGNNum, usMBNum, nIndex, usType);
 Argument		(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT nIndex : PLC device index No. 0: Write PLC device 1: Read PLC device (i)SHORT usEnable : PLC device enabled
 Return value		Setting result 0xA001 : Menu group No. is not correct. 0xA002 : Menu button No. is not correct. 0xA003 : PLC device index is not correct. 0xA005 : PLC device enabled is not correct. 0x0 : Normal
 Details		Sets the PLC device enabled status to allocate to the control. One of the following values is set for usEnable. 0: Disabled 1: Enabled 2: Same setting as Write PLC device
 Example		Sets the PLC device enabled of the write PLC device of the 1st menu button of GNCExMenu00000 in the self screen to "Enabled". GCSNCExMenuSetMenuDeviceEnable(-1, "GNCExMenu00000", 1, 1, 0, 1);

GCSNCExMenuGetMenuDeviceEnable Get PLC device enabled	
Syntax	GCSNCExMenuGetMenuDeviceEnable (lWindowNo, strName, usMGNNum, usMBNum, nIndex)
Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBNum : menu button No. (1 to 10) (i)SHORT nIndex : PLC device index No. 0: Write PLC device 1: Read PLC device
Return value	PLC device enabled 0: Disabled 1: Enabled 2: Same setting as Write PLC device
Details	Gets the PLC device enabled status allocated to the control.
Example	Gets the PLC device enabled of the write PLC device of the 1st menu button of GNCExMenu00000 in the self screen in Stat. SHORT Stat; Stat = GCSNCExMenuGetMenuDeviceEnable(-1, "GNCExMenu00000", 1, 1, 0);

GCSNCEExMenuSetMenuDeviceBitPosition		Set bit position of PLC device
 Syntax	GCSNCEExMenuSetMenuDeviceBitPosition (lWindowNo, strName, usMGNNum, usMBNum, nIndex, ucDeviceBitPos);	
 Argument	(i)LONG lWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)SHORT usMGNNum	: menu group No. (1 to 10)
	(i)SHORT usMBNum	: menu button No. (1 to 10)
	(i)SHORT nIndex	: PLC device index No. 0: Write PLC device 1: Read PLC device
	(i)CHAR ucDeviceBitPos	: Bit position of PLC device (0 to 15)
 Return value	Setting result 0xA001: Menu group No. is not correct. 0xA002: Menu button No. is not correct. 0xA003: PLC device index is not correct. 0xA006: Bit position of PLC device is not correct. 0x0 : Normal	
 Details	Sets the bit position of the PLC device to allocate to the control.	
 Example	Sets the bit position of the write PLC device of the 1st menu button of GNCEExMenu00000 in the self screen to "5". GCSNCEExMenuSetMenuDeviceBitPosition(-1, "GNCEExMenu00000", 1, 1, 0, 5);	

GCSNCExMenuGetMenuDeviceBitPosition		Get bit position of PLC device
 Syntax	GCSNCExMenuGetMenuDeviceBitPosition (lWindowNo, strName, usMGNNum, usMBNum, nIndex)	
 Argument	(i)LONG lWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)SHORT usMGNNum	: menu group No. (1 to 10)
	(i)SHORT usMBNum	: menu button No. (1 to 10)
	(i)SHORT nIndex	: PLC device index No. 0: Write PLC device 1: Read PLC device
 Return value	Bit position of PLC device (0 to 15)	
 Details	Gets the bit position of the PLC device allocated to the control.	
 Example	Gets the bit position of the write PLC device of the 1st menu button of GNCExMenu00000 in the self screen in Stat. CHAR Stat; Stat = GCSNCExMenuGetMenuDeviceBitPosition(-1, "GNCExMenu00000", 1, 1, 0);	

GCSNCEExMenuSetMenuDeviceVal Set PLC device value	
Syntax	<code>GCSNCEExMenuSetMenuDeviceVal (lWindowNo, strName, usMGNNum, usMBNum, nIndex, ucDeviceVal);</code>
Argument	<p>(i)LONG lWindowNo : screen No. (Specify -1 for self screen.)</p> <p>(i)STRING strName : control name</p> <p>(i)SHORT usMGNNum : menu group No. (1 to 10)</p> <p>(i)SHORT usMBNum : menu button No. (1 to 10)</p> <p>(i)SHORT nIndex : PLC device index No.</p> <p> 0: Write PLC device 1: Read PLC device</p> <p>(i)CHAR ucVal : PLC device value</p>
Return value	<p>Setting result</p> <p>0xA001: Menu group No. is not correct.</p> <p>0xA002: Menu button No. is not correct.</p> <p>0xA003: PLC device index is not correct.</p> <p>0xA007: Writing failure</p> <p>0x0 : Normal</p>
Details	<p>Sets the PLC device value to allocate to the control.</p> <p>(Note) Monitors the write PLC device and the read PLC device using Timer event. Changing the device by ladder side changes the menu button status according to the device status. When writing a PLC device by both custom screen side and ladder side, the last writing is valid.</p>
Example	<p>Sets the PLC device value of the write PLC device of the 1st menu button of GNCEExMenu00000 in the self screen to "1".</p> <pre>GCSNCEExMenuSetMenuDeviceVal(-1, "GNCEExMenu00000", 1, 1, 0, 1);</pre>

GCSNCExMenuGetMenuDeviceVal		Get PLC device value
 Syntax		GCSNCExMenuGetMenuDeviceVal (lWindowNo, strName, usMGNNum, usMBNum, nIndex)
 Argument	(i)LONG lWindowNo	: screen No. (Specify -1 for self screen.)
	(i)STRING strName	: control name
	(i)SHORT usMGNNum	: menu group No. (1 to 10)
	(i)SHORT usMBNum	: menu button No. (1 to 10)
	(i)SHORT nIndex	: PLC device index No. 0: Write PLC device 1: Read PLC device
 Return value	PLC device value	
 Details	Gets the PLC device value allocated to the control.	
 Example	Gets the PLC device value of the write PLC device of the 1st menu button of GNCExMenu00000 in the self screen in Stat. CHAR Stat; Stat = GCSNCExMenuGetMenuDeviceVal (-1, "GNCExMenu00000", 1, 1, 0);	

GCSNCExMenuSetButtonGroupAllOffState	Set all OFF state of button group
 Syntax	GCSNCExMenuSetButtonGroupAllOffState (lWindowNo, strName, usMGNNum, usMBGNum, ucStatus);
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBGNum : button group No. (1 to 5) (i)CHAR ucStatus : all OFF state
 Return value	None
 Details	Sets all OFF state of the button group. One of the following values is set for ucStatus. 0: Permission 1: Prohibition
 Example	Sets all OFF state of the 1st button group of GNCExMenu00000 in the self screen to "Prohibition". GCSNCExMenuSetButtonGroupAllOff(-1, "GNCExMenu00000", 1, 1, 1);

GCSNCExMenuGetButtonGroupAllOffState	Get all OFF state of button group
 Syntax	GCSNCExMenuGetButtonGroupAllOffState (lWindowNo, strName, usMGNNum, usMBGNum)
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT usMGNNum : menu group No. (1 to 10) (i)SHORT usMBGNum : button group No. (1 to 5)
 Return value	All OFF state 0: Permission 1: Prohibition
 Details	Gets the all OFF state of the button group.
 Example	Gets the setting value of all OFF state of the 1st button group of GNCExMenu00000 in the self screen in Stat. CHAR Stat; Stat = GCSNCExMenuGetButtonGroupAllOff(-1, "GNCExMenu00000", 1, 1);

GCSNCExMenuBeginAnimState	Start menu animated motion setting
 Syntax	GCSNCExMenuBeginAnimState (lWindowNo, strName, nMenuAnmType)
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name (i)SHORT nMenuAnmType : menu animation direction
 Return value	None
 Details	Starts the menu state change. One of the following values is set for nMenuAnmType. 0: No animation 1: Upward 2: Downward 3: Leftward 4: Rightward
 Example	Switches the display to menu group 2 while animating upward for GNCExMenu00000 in the self screen. GCSNCExMenuBeginAnimState (-1, "GNCExMenu00000", 1); GCSNCExMenuChangeMenuGroupNum (-1, "GNCExMenu00000", 2); GCSNCExMenuEndAnimState (-1, "GNCExMenu00000");

GCSNCExMenuEndAnimState	Complete menu animated motion setting (start animation)
 Syntax	GCSNCExMenuEndAnimState (lWindowNo, strName)
 Argument	(i)LONG lWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
 Return value	None
 Details	Completes the menu state change and starts menu animation.
 Example	Switches the display to menu group 2 while animating upward for GNCExMenu00000 in the self screen. GCSNCExMenuBeginAnimState (-1, "GNCExMenu00000", 1); GCSNCExMenuChangeMenuGroupNum (-1, "GNCExMenu00000", 2); GCSNCExMenuEndAnimState (-1, "GNCExMenu00000");

GCSNCExMenuStopAnim	Stop menu animation
Syntax	GCSNCExMenuStopAnim (IWindowNo, strName)
Argument	(i)LONG IWindowNo : screen No. (Specify -1 for self screen.) (i)STRING strName : control name
Return value	None
Details	Stops menu animation and displays the menu after the state has been changed.
Example	Stops the current menu animation and displays the menu after the state has been changed for GNCExMenu00000 in the self screen. GCSNCExMenuStopAnim (-1, "GNCExMenu00000");

6. NC Data Access Function

GCSNCDataSetGNCValue	Set numerical value in NC
Syntax	<code>GCSNCDataSetGNCValue(gmNCControl, ISection, ISubSection, IDataType, gmValue);</code>
Argument	<ul style="list-style-type: none"> (i)GMEM gmNCControl : global memory for NC information (GNCCControl) (i)LONG ISection : section No. (i)LONG ISubSection : sub-section No. (i)LONG IDatatype : data type (i)GMEM gmValue : global memory to store numerical value
Return value	<ul style="list-style-type: none"> 0: setting failed 1: setting succeeded
Details	<p>Set the value stored in gmValue to NC.</p> <p>One of the following values is set for IDatatype:</p> <ul style="list-style-type: none"> 0x1 :1-byte integer type 0x2 :2-byte integer type 0x3 :4-byte integer type 0x5 :8-byte real type
Example	<p>Sets <empty> to the common variable #100 of the 2nd basic part system in the NC No. 1.</p> <pre> GMEM gControl ; gControl = GMEMCreate("NCCONTROL", 16) ; GMEMSetLong(gControl, 0, 1) ; ' Set the NC No. to 1. GMEMSetLong(gControl, 4, 2) ; ' Select the 2nd part system. GMEMSetLong(gControl, 8, 0) ; ' Select basic part system. GMEMSetLong(gControl, 12, H0) ; ' Not specify the axis number. GMEM NaN ; NaN = GMEMCreate("KUU", 8) ; GMEMSetLong(NaN, 0, HFFFFFFF) ; GMEMSetLong(NaN, 4, H7FFFFFFF) ; LONG Stat ; Stat = GCSNCDataSetGNCValue(gControl, 4, 800, 5, NaN) ; GMEMDelete(gControl); GMEMDelete(NaN); </pre>

GCSNCDATAGetGNCValue	Get numerical value from NC
 Syntax	<code>GCSNCDATAGetGNCValue(gmNCControl, ISection, ISubSection, IDatatype, gmValue);</code>
 Argument	<ul style="list-style-type: none"> (i)GMEM gmNCControl : global memory for NC information (GNCCONTROL) (i)LONG ISection : section No. (i)LONG ISubSection : sub-section No. (i)LONG IDatatype : data type (o)GMEM gmValue : global memory to store numerical value
 Return value	<ul style="list-style-type: none"> 0: acquisition failed 1: acquisition succeeded 2: variable <empty>
 Details	<p>Stores the numerical value data got from NC in gmValue. One of the following values is set for IDatatype:</p> <ul style="list-style-type: none"> 0x1 :1-byte integer type 0x2 :2-byte integer type 0x3 :4-byte integer type 0x5 :8-byte real type
 Example	<p>Gets the common variable #100 of the 2nd basic part system in the NC No. 1.</p> <pre> GMEM gControl ; gControl = GMEMCreate("NCCONTROL", 16) ; GMEMSetLong(gControl, 0, 1) ; ' Set the NC No. to 1. GMEMSetLong(gControl, 4, 2) ; ' Select the 2nd part system. GMEMSetLong(gControl, 8, 0) ; ' Select basic part system. GMEMSetLong(gControl, 12, H0) ; ' Not specify the axis number. LONG Stat ; GMEM mem ; mem = GMEMCreate("TESTMEM", 8) ; Stat = GCSNCDATAGetGNCValue(gControl, 4, 800, 5, mem) ; DOUBLE dVal; dVal = GMEMGetDouble(mem, 0) ; GMEMDelete(gControl); GMEMDelete(mem); </pre>

GCSNCDatDataSetString	Set character string in NC
Syntax	<pre>GCSNCDatDataSetString(gmNCControl, ISection, ISubSection, pString);</pre>
Argument	<ul style="list-style-type: none">(i)GMEM gmNCControl : Global memory for NC information (GNCCControl)(i)LONG ISection : section No.(i)LONG ISubSection : sub-section No.(i)STRING pString : character string to be set
Return value	<ul style="list-style-type: none">0: setting failed1: setting succeeded
Details	Sets the character string stored in pString to NC.
Example	<p>Sets the 3rd axis' name of the 2nd basic system in the NC No. 1 to "Z2".</p> <pre>LONG Stat ; GMEM gControl ; gControl = GMEMCreate("NCCONTROL", 16) ; GMEMSetLong(gControl, 0, 1) ; ' Set the NC No. to 1. GMEMSetLong(gControl, 4, 2) ; ' Select the 2nd part system. GMEMSetLong(gControl, 8, 0) ; ' Select basic part system. GMEMSetLong(gControl, 12, 3) ; ' Set the axis number to 3. Stat = GCSNCDatDataSetString(gControl, 127, 2, "Z2") ; GMEMDelete(gControl);</pre>

GCSNCDatGetString	Get character string from NC
Syntax	GCSNCDatGetString(gmNCControl, ISection, ISubSection, pString);
Argument	(i)GMEM gmNCControl : Global memory for NC information (GNCControl) (i)LONG ISection : section No. (i)LONG ISubSection : sub-section No. (o)STRING pString : character string
Return value	0: acquisition failed 1: acquisition succeeded
Details	Stores the character string got from NC in pString.
Example	Gets the 3rd axis' name of the 2nd basic system in the NC No. 1. STRING strData ; LONG Stat ; GMEM gControl ; gControl = GMEMCreate("NCCONTROL", 16) ; GMEMSetLong(gControl, 0, 1) ; ' Set the NC No. to 1. GMEMSetLong(gControl, 4, 2) ; ' Select the 2nd part system. GMEMSetLong(gControl, 8, 0) ; ' Select basic part system. GMEMSetLong(gControl, 12, 3) ; ' Set the axis number. to 3. Stat = GCSNCDatGetString(gControl, 127, 2, strData) ; GMEMDelete(gControl);

meSetData	Set NC data	
Syntax	meSetData(IAddress, ISectionNum, ISubSectionNum, IAxisFlag, Data);	
Argument	(i)LONG IAddress	: Address Specify the following items. - Specify NC. - Specify the basic part system or current part system during cross control. - Specify the part system. - Specify the ground (Fore/Back). - Specify the forced write mode.
	(i)LONG ISectionNum	: Section No.
	(i)LONG ISubSectionNum	: Sub-section No.
	(i)LONG IAxisFlag	: Axis
	(i) Variable-type Data	: Setting data
Return value	ME_DATA_WRITE_ADDR (H80040290)	: The specified address is not correct.
	ME_DATA_WRITE_SECT (H80040291)	: The section number is not correct.
	ME_DATA_WRITE_SUBSECT (H80040292)	: The sub-section number is not correct.
	ME_DATA_WRITE_AXIS (H800402A0)	: The specified axis is not correct.
	ME_DATA_WRITE_DATASIZE (H80040296)	: Data size over
	ME_DATA_WRITE_DATATYPE (H80040297)	: The specified data type is not correct.
	ME_DATA_WRITE_READONLY (H8004029B)	: Read only data
	ME_DATA_WRITE_WRITE (H8004029E)	: Cannot write data.

 Details	<p>Sets data that is specified for the Address, Section No., Sub-section No., and Axis.</p> <p>For specifying an axis (AxisFlag), specify a flag (bit0 to bitF) corresponding to the axis. Data of multiple axes can be acquired at the same time by specifying multiple flags.</p> <p>Axis specification example) When acquiring data of axis 1, 3, and 5.</p> <table border="1" style="margin-left: 20px; border-collapse: collapse; text-align: center;"> <tr> <td>31</td><td>30</td><td>...</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td> </tr> <tr> <td>0</td><td>0</td><td>...</td><td>1</td><td>0</td><td>1</td><td>0</td><td>1</td> </tr> </table> <p>For Variable-type Data, specify a variable type (including an array) other than the GMEM type.</p> <p>When setting data of multiple axes, specify the target axis for "Axis", and set an array-type variable for "Setting data".</p>	31	30	...	4	3	2	1	0	0	0	...	1	0	1	0	1
31	30	...	4	3	2	1	0										
0	0	...	1	0	1	0	1										
 Example	<pre style="font-family: monospace; margin-left: 20px;"> LONG IData(3); LONG IStatus; LONG IAddress; IAddress = ADR_MACHINE(1) ADR_SYSTEM(1); 'Set the data of each axis IData(0)=100; IData(1)=200; IData(2)=300; 'Set the data of axis parameter [cutting feed clamp speed] 1st, 2nd and 5th axis (0x10011=H13) IStatus = melSetData(IAddress, 127, 2002, H13, IData); </pre>																

meIGetData	Get NC data	
Syntax	meIGetData(IAddress, ISectionNum, ISubSectionNum, IAxisFlag, Data);	
Argument	(i)LONG IAddress	: Address Specify the following items. - Specify NC. - Specify the basic part system or current part system during cross control. - Specify the part system. - Specify the ground (Fore/Back).
	(i)LONG ISectionNum	: Section No.
	(i)LONG ISubSectionNum	: Sub-section No.
	(i)LONG IAxisFlag	: Axis
	(o)Variable-type Data	: Obtained data
Return value	ME_DATA_READ_ADDR (H80040190)	: The specified address is not correct.
	ME_DATA_READ_SECT (H80040191)	: The section number is not correct.
	ME_DATA_READ_SUBSECT (H80040192)	: The sub-section number is not correct.
	ME_DATA_READ_DATASIZE (H80040196)	: Data size over
	ME_DATA_READ_READ (H8004019D)	: Read disabled data
	ME_DATA_READ_DATATYPE (H80040197)	: The specified data type is not correct.
	ME_DATA_READ_AXIS (H800401A0)	: The specified axis is not correct.
	ME_DATA_READ_WRITEONLY (H8004019F)	: Write only data

 Details	<p>Gets the data that is specified using arguments.</p> <p>For specifying an axis (AxisFlag), specify a flag (bit0 to bitF) corresponding to the axis. Data of multiple axes can be acquired at the same time by specifying multiple flags.</p> <p>Axis specification example) When acquiring data of axis 1, 3, and 5.</p>
 Example	<pre>31 30 ... 4 3 2 1 0 0 0 ... 1 0 1 0 1 </pre> <p>For "Variable-type Data", specify a variable type (including an array) other than the GMEM type.</p> <p>When getting data of multiple axes, specify the target axis for "Axis", and set an array-type variable for "Obtained data".</p>

```
LONG IData(3);
LONG IStatus;
LONG IAddress;
IAddress = ADR_MACHINE(1) | ADR_SYSTEM(1);
'Get the data of axis parameter [cutting feed clamp speed] 1st, 2nd
and 5th axis (0x10011=H13)
IStatus = melGetData(IAddress, 127, 2002, H13, IData);
```

melGetLumpData	Collectively get successive NC data items	
Syntax	melGetLumpData(IAddress, ISectionNum, ISubSectionNum, IGetNos, Data);	
Argument	(i)LONG IAddress : Address Specify the following items. - Specify NC. - Specify the basic part system or current part system during cross control. - Specify the part system. - Specify the ground (Fore/Back). - Specify the part system. (i)LONG ISectionNum : Section No. (i)LONG ISubSectTop : Head sub-section No. (i)LONG IGetNos : Number of successive data items (o)Variable-type Data : Obtained data	
Return value	ME_DATA_READ_ADDR (H80040190) : The specified address is not correct. ME_DATA_READ_SECT (H80040191) : The section number is not correct. ME_DATA_READ_SUBSECT (H80040192) : The sub-section number is not correct. ME_DATA_READ_DATASIZE (H80040196) : Data size over ME_DATA_READ_READ (H8004019D) : Read disabled data ME_DATA_READ_DATATYPE (H80040197) : The specified data type is not correct.	
Details	Gets the data that is specified using arguments. For "Variable-type Data", specify a variable type (including an array) other than the GMEM type. When setting a value of 2 or greater as "Number of successive data items", specify the variable name of the array-type variable for "Obtained data".	
Example	<pre>LONG IData(3); LONG IStatus; LONG IAddress; IAddress = ADR_MACHINE(1) ADR_SYSTEM(1); 'Collectively get the common variables (#100 to #102) IStatus = melGetLumpData(IAddress, 4, 800, 3, IData);</pre>	

melSelectExecPrg	Search for operation program	
Syntax	melSelectExecPrg(IAddress, pSelectPrg, ISequenceNum, IBlockNum);	
Argument	(i)LONG IAddress	: Address Specify the following items. - Specify NC. - Specify the part system.
	(i)STRING pSelectPrg	: Program file name for which the operation search is performed
	(i)LONG ISequenceNum	: Sequence No. to be searched for
	(i)LONG IBlockNum	: Block No. to be searched for
Return value	ME_OPE_SELECTPRG_ADDR (H80001090)	: The specified address is not correct.
	ME_OPE_SELECTPRG_PRGFORM AT(H80001001)	: The format of the program file name is not correct.
	ME_OPE_SELECTPRG_NOTPRG (H80001002)	: The specified program is not found.
	ME_OPE_SELECTPRG_RUNNING (H80001003)	: The program is currently running.
	ME_OPE_SELECTPRG_RESET (H80001004)	: In process of resetting
	ME_OPE_SELECTPRG_FILESYSTE M(H80001043)	: Some kind of error occurred in the file system.
	ME_OPE_SELECTPRG_DATATYPE (H80001094)	: The specified data type is not correct.
	ME_OPE_SELECTPRG_SEARCHIN G(H8000100A)	: Cannot perform search (currently carrying out another search).
	ME_OPE_SELECTPRG_MODE (H80001091)	: The specified operation mode is not correct.
	ME_OPE_SELECTPRG_NOTSUPPO RTED(H80001049)	: A file of the unsupported device has been specified.
Details	Performs the operation search of the specified program. When both "Sequence number" and "Block number" are set to 0, the operation search starts from the head of the program. If a value other than 0 is specified, the operation search starts from that position.	

Example

```
LONG IStatus;  
LONG IAddress;  
IAddress = ADR_MACHINE(1) | ADR_SYSTEM(1);  
'Perform the operation search of the program (machining program  
No. 100 in NC memory)  
IStatus = melSelectExecPrg(IAddress, "M01:\PRG\USER\100", 0, 0);
```

7. String Operation Functions

strcat	Concatenate character strings
Syntax	strcat(strDst, strSrc);
Argument	(i/o)STRING strDst : Destination character string (i)STRING strSrc : Source character string
Return value	Null character " ": Concatenation has failed. Concatenated character string: Concatenation has succeeded.
Details	Concatenates strSrc to the end of strDst, and returns the character string to strDst.
Example	<pre>STRING strDst; STRING strSrc; STRING strResult; strDst = "XYZ"; strSrc = "ABC"; strResult = strcat(strDst, strSrc); // Returns "XYZABC" to strDst, strResult.</pre>

strcmp	Compare character strings
Syntax	strcmp(strCmp1, strCmp2);
Argument	(i)STRING strCmp1 : Comparison character string 1 (i)STRING strCmp2 : Comparison character string 2
Return value	Less than 0 : strCmp1 is less than strCmp2. 0 : strCmp2 is the same as strCmp1. Greater than 0 : strCmp1 is greater than strCmp2.
Details	Compares strCmp1 with strCmp2, and returns the comparison result.
Example	<pre>STRING strCmp1; STRING strCmp2; LONG IResult; strCmp1 = "ABC"; strCmp2 = "DEF"; IResult = strcmp(strCmp1, strCmp2); // Returns a value less than 0 to IResult.</pre>

strcpy	Copy a character string
Syntax	strcpy(strDst, strSrc);
Argument	(o)STRING strDst : Destination character string (i)STRING strSrc : Source character string
Return value	Null character " ": Copy has failed. Destination character string: Copy has succeeded.
Details	Copies strSrc to strDst.
Example	STRING strDst; STRING strSrc; STRING strResult; strSrc = "ABC"; strResult = strcpy(strDst, strSrc); // Returns "ABC" to strDst, strResult.

strlen	Get the number of characters in the target character string
Syntax	strlen(strTarget);
Argument	(i)STRING strTarget: Target character string
Return value	0 or greater: Number of characters
Details	Returns the number of characters in strTarget.
Example	STRING strTarget; LONG IResult; strTarget = "XYZ"; IResult = strlen(strTarget); // Returns 3 to IResult.

strncat	Concatenate character strings by the specified number of characters
Syntax	strncat(strDst, strSrc, ISize);
Argument	(i/o)STRING strDst : Destination character string (i)STRING strSrc : Source character string (i)LONG ISize : Number of characters to be added
Return value	Null character " ": Concatenation has failed. Concatenated character string: Concatenation has succeeded.
Details	Adds strSrc to strDst by ISize characters.
Example	<pre>STRING strDst; STRING strSrc; STRING strResult; strDst = "XYZ"; strSrc = "ABC"; strResult = strncat(strDst, strSrc, 2); // Returns "XYZAB" to strDst, strResult. strResult = strncat(strDst, strSrc, 5); // Returns "XYZABC" to strDst, strResult.</pre>

strcmp	Compare character strings by the specified number of characters
Syntax	strcmp(strCmp1, strCmp2, ISize);
Argument	(i)STRING strCmp1: Target character string 1 (i)STRING strCmp2: Target character string 2 (i)LONG ISize : Number of characters to be compared
Return value	Less than 0: strCmp1 is less than strCmp2. 0 : strCmp2 is the same as strCmp1. Greater than 0: strCmp1 is greater than strCmp2.
Details	Compares character string strCmp1 with strCmp2 by ISize characters, and returns the comparison result.
Example	<pre>STRING strCmp1; STRING strCmp2; LONG IResult; strCmp1 = "ABCDEF"; strCmp2 = "ABCABC"; IResult = strcmp(strCmp1, strCmp2, 3); // Returns 0 to IResult.</pre>

strncpy	Copy a character string by the specified number of characters
Syntax	strncpy(strDst, strSrc, ISize);
Argument	(o)STRING strDst : Destination character string (i)STRING strSrc : Source character string (i)LONG ISize : Number of characters to be copied
Return value	Null character " ": Copy has failed. Destination character string: Copy has succeeded.
Details	Copies strSrc to strDst by ISize characters.
Example	<pre>STRING strDst; STRING strSrc; LONG ISize; STRING strResult; ISize = 2; strSrc = "ABC"; strResult = strncpy(strDst, strSrc, ISize); // Returns "AB" to strDst, strResult.</pre>

strchr	Search for a character from the beginning of a character string
Syntax	strchr(strTarget, ISearch);
Argument	(i)STRING strTarget : Character string to be searched (i)LONG ISearch : Search character (Specified using an ASCII code.)
Return value	0 or greater : Character detection position -1 : Not detected.
Details	Searches for strTarget, and returns the position of the first detected ISearch.
Example	<pre>STRING strTarget; LONG ISearch; LONG IPosition; strTarget = "ABCDEFG"; ISearch = H42; // "B" IPosition = strchr(strTarget, ISearch); // Returns 1 to IPosition.</pre>

strrchr	Search for a character from the end of a character string
Syntax	strrchr(strTarget, ISearch);
Argument	(i)STRING strTarget: Character string to be searched (i)LONG ISearch : Search character (Specified using an ASCII code.)
Return value	0 or greater : Character detection position -1 : Not detected.
Details	Searches for strTarget, and returns the position of the last detected ISearch.
Example	<pre>STRING strTarget; LONG ISearch; LONG IPosition; strTarget = "ABCDEFG"; ISearch = H43; // "C" IPosition = strrchr(strTarget, ISearch); // Returns 2 to IPosition.</pre>

strpbrk	Search for characters included in a character group from the beginning of a character string
Syntax	strpbrk(strTarget, strCharSet);
Argument	(i)STRING strTarget : Character string to be searched (i)STRING strCharSet : Search character group
Return value	0 or greater : Character detection position -1 : Not detected.
Details	Searches for strTarget, and returns the position at which any character included in the character group specified in strCharSet is first detected.
Example	<pre>STRING strTarget; STRING strCharSet; LONG IPosition; strTarget = "ABCDEF"; strCharSet = "FC"; IPosition = strpbrk(strTarget, strCharSet); // Returns 2 to IPosition.</pre>

strstr	Search for a character string from the beginning
Syntax	strstr(strTarget, strSearch);
Argument	(i)STRING strTarget : Character string to be searched (i)STRING strSearch : Search character string
Return value	0 or greater : Character detection position -1 : Not detected.
Details	Searches for strTarget, and returns the position at which the character string specified in strSearch is first detected.
Example	<pre>STRING strTarget; STRING strSearch; LONG IPosition; strTarget = "ABCDEFGHI"; strSearch = "DEF"; IPosition = strstr(strTarget, strSearch); // Returns 3 to IPosition.</pre>

strspn	Search for characters not included in a character group from the beginning of a character string
Syntax	strspn(strTarget, str CharSet);
Argument	(i)STRING strTarget : Character string to be searched (i)STRING str CharSet : Search character group
Return value	0 or greater: Position at which characters not included in the search character group are detected Returns the number of characters in strTarget if the position is not detected.
Details	Searches for strTarget, and returns the position at which characters not included in the character group specified in str CharSet are first detected.
Example	<pre>STRING strTarget; STRING str CharSet; LONG IPosition; strTarget = "AABBCCDEF"; str CharSet = "ABC"; IPosition = strspn(strTarget, str CharSet); // Returns 6 to IPosition.</pre>
strcspn	Search for characters included in a character group from the beginning of a character string
Syntax	strcspn(strTarget, str CharSet);
Argument	(i)STRING strTarget : Character string to be searched (i)STRING str CharSet : Search character group
Return value	0 or greater: Position at which characters included in the search character group are detected Returns the number of characters in strTarget if the position is not detected.
Details	Searches for strTarget, and returns the position at which any character included in the character group specified in str CharSet is detected.
Example	<pre>STRING strTarget; STRING str CharSet; LONG IPosition; strTarget = "AABBCCDEF"; str CharSet = "FED"; IPosition = strcspn(strTarget, str CharSet); // Returns 6 to IPosition.</pre>

LTOA

Convert the integer value to a character string

 Syntax

LTOA(IValue, IRadix);

 Argument

(i)LONG IValue	: Integer value
(i)LONG IRadix	: Radix (2 to 16)

 Return value

Null character " ": Conversion has failed.
Converted character string: Conversion has succeeded.

 Details

Converts the integer value specified in IValue to a character string.
The conversion method can be specified using IRadix.
If a value other than 2 to 16 is specified in IRadix, it is converted as 10.

 Example

```
STRING strResult;
LONG IValue;

IValue = 123456;
strResult = LTOA(IValue, 10);
// Returns a decimal character string "123456" to strResult.
strResult = LTOA(IValue, 16);
// Returns a hexadecimal character string "1E240" to strResult.
```

FTOA

Convert the real value to a character string

 Syntax

FTOA(dbValue, Digit);

 Argument

(i)DOUBLE dbValue	: Real value
(i)LONG Digit	: Number of decimal places (0 to 10)

 Return value

Null character " ": Conversion has failed.
Converted character string: Conversion has succeeded.

 Details

Converts the real value specified in dbValue to a character string.
Rounds off digits not specified in Digit.
If the number of significant digits is less than the number of decimal places, 0s are embedded.

 Example

```
STRING strResult;
DOUBLE dbValue;

dbValue = 123.45678;
strResult = FTOA(dbValue, 2);
// Returns "123.46" to strResult.
strResult = FTOA(dbValue, 10);
// Returns "123.4567800000" to strResult.
```

8. Other Functions

Sleep	Interrupt the macro execution during a specified time.
Syntax	Sleep(lMilliseconds);
Argument	(i)LONG lMilliseconds : The time to interrupt the macro execution (ms) * A negative value is handled as 0.
Return value	None
Details	Interrupt the macro execution during the specified time. * This macro is available on D5 version or later.
Example	<pre> STRING strToolNo; LONG lStat; LONG lAddress; LONG lNum; ' Specify the tool number to search. strToolNo = "10/1"; ' Search the tool number. lAddress = ADR_MACHINE(1) ADR_SYSTEM(1); lStat = melSetData(lAddress, 15, 2000005, 0, strToolNo); WHILE (lNum == -1) DO 1; ' Interrupt the macro execution and execute the NC process. Sleep(20); lStat = melGetData(lAddress, 15, 2000005, 0, strToolNo); lNum = ATOL(strToolNo); END 1;</pre>

9. Error Message List

The error messages displayed in the "Macro Edit" dialog box and description are shown below.

Error message	Error code	Detail description
Format error	1	There is description that cannot be interpreted. It is not a variable name, function name or programming language.
Variable name error	2	Error in macro reserved word variable name.
(is missing	3	Starting parenthesis "(" is missing in the function or IF statement.
No. of() does not agree	4	Number of () does not match.
Position of , is incorrect	5	A comma (,) is in an incorrect position.
Function argument error	6	Error in function argument
=command error	7	Error in substituted part such as 3=VAR_A;
End of program is incomplete	8	The program is incomplete.
IF sentence error	9	There is an error in the description of IF, ELSE or ENDIF.
, or ; is missing	10	The comma (,) after the function argument is missing. Or the program is not delimited with the semicolon (;).
Grammar error with FOR command	11	Not paired with NEXT, BREAK or CONTINUE.
Too many FOR command(Max 8)	12	Up to eight levels of FOR statement are allowed. Contain the depth of nest within eight.
Maximum number of lines exceeded	18	Up to 10000 lines are allowed in an event.
Too many IF command(Max 15)	19	Up to 15 levels of IF statement are allowed. Contain the depth of nest within 15.
GOTO sentence error	20	<ul style="list-style-type: none"> - Not paired with the sequence No. - The label of GOTO destination is not written after the GOTO statement. - The label of GOTO destination is in FOR-NEXT and WHILE-END.
WHILE DO sentence error	21	Not paired with END.
Too many WHILE command	22	Up to 27 levels of WHILE statement are allowed. Contain the depth of nest within 27.
Label error	23	There is a variable name of the No. designated by GOTO statement. (SHORT N100; ... GOTO 100;)
Array designation impossible	24	An array type is specified for the data type (GMEM) that cannot be declared with an array type.
Number of array designation elements exceeded the range	25	Specify the number of array elements in the range from 1 to 100.

9. Error Message List

Error message	Error code	Detail description
Declaration of number of array elements illegal	26	The number of array elements is invalid. Specify a numerical value for the number of elements.
Range of number of array elements illegal	27	A value out of the range is specified for the number of elements. Specify the number of elements in the range from "0" to "the specified number of elements -1".
Number of array variables per line exceeded	28	Up to 20 array variables can be specified per line.
Designation type of array element illegal	29	An integer constant or a value other than variables is specified as the array element.
Double-byte space error	30	Double-byte spaces cannot be used for anything other than comments and character strings of argument.

The probable causes of the format error are described below.

Error message	Error condition
Format error	The macro is described at other than the location between header and footer of the macro (\$ButtonXXX-OnClick and \$End).
	Two variables are declared at a time. Example: SHORT A,B;
	A character string starting at other than a letter ('A' to 'Z' or 'a' to 'z') or underscore ('_') is designated as a variable name.
	32 or more characters are designated as a variable name.
	The same variable name as that of variable type (reserved words) is specified. Example: CHAR CHAR,, SHORT SHORT;, etc.
	The name of the control designated as an argument of the macro command is not enclosed with double quotation marks " ".

Appendix

Appendix 1. Data Type Definitions

The definitions for various structure data types are given below.

```
#define GColor long /* color variable */
#define HFONT GFontHandle* /* 2 font handle */
#define HGDRAW GDraw* /* drawing handle */

/*****
 * Rectangle structure
 *****/
typedef struct _GRect{
    short nXmin; /* upper left X coordinate */
    short nYmin; /* upper left Y coordinate */
    short nXmax; /* lower right X coordinate */
    short nYmax; /* lower right Y coordinate */
}GRect;

/*****
 * Point structure
 *****/
typedef struct _GPoint{
    short nX; /* X coordinate */
    short nY; /* Y coordinate */
}GPoint;

/*****
 * Line structure
 *****/
typedef struct _GLine{
    short nX1; /* X coordinate for starting point */
    short nY1; /* Y coordinate for starting point */
    short nX2; /* X coordinate for ending point */
    short nY2; /* Y coordinate for ending point */
}GLine;

/*****
 * Polygon structure
 *****/
typedef struct _GPoly{
    short nNumPoints; /* number of vertices */
    GPoint *pgptPoints; /* pointer to vertex data */
    GRect grBounds; /* outline rectangle */
}GPoly;

/*****
 * Brush structure
 *****/
typedef struct _GBrush{
    short nFillPattern; /* fill pattern */
    GColor gcForeColor; /* fill foreground color */
    GColor gcBackColor; /* fill background color */
}GBrush;
```

```

/***********************
 * Border structure
 ***********************/
typedef struct _GBorder{
    unsigned char    fBorder;          /* 3D border present or absent */
    GColor          gcULColor;        /* upper left border color */
    GColor          gcLRCColor;       /* lower right border color */
    GColor          gcLineColor;      /* line color */
    short           nSize;           /* 3D border size */
}GBorder;

/***********************

Appendix 2. Macro Event Arguments

Arguments of some macro events are passed on execution.

The arguments are stored in LLPARAM and LUPARAM, and the contents are different depending on the macro event.

Macro event	LLPARAM	LUPARAM
OnKeyPress	Key code	Auxiliary key code
OnKeyRelease	Key code	Auxiliary key code
OnPress	-	XY coordinates
OnRelease	-	XY coordinates
OnClick	-	-
OnDraw	(Reserve)	-
OnTimer	(Reserve)	-
OnSetFocus	-	-
OnKillFocus	-	-
OnCreate	-	-
OnDelete	-	-
OnScroll	Scroll method	Scroll position
OnScrollFinish	-	-
OnSelectChange	Selected line	-
OnError	-	Error code
OnUpperLimitOver	-	-
OnLowerLimitOver	-	-
OnInit	-	-
OnQuit	-	-

Appendix 2.1 OnKeyPress/OnKeyRelease Arguments

The following list shows the key entry, the key code stored in LLPARAM, and the auxiliary key code stored in LUPARAM.

Key entry	Key code	Auxiliary key code
A	65	-
B	66	-
C	67	-
D	68	-
E	69	-
F	70	-

NOTE

- ◆ The list above describes the key code that can be entered with ABC array NC keyboard.
- ◆ F1 to 10, cancel, and page feed keys correspond to the buttons at the bottom of the display unit.
- ◆ A logical sum with the auxiliary key code stored in LUPARAM has the following meaning (key entry).

Auxiliary key code	Value	Meaning
BIT0	0x01	SHIFT
BIT1	0x02	CONTROL
BIT2	0x04	ALTER

- ◆ For LUPARAM, BIT0 is turned ON by entering Shift and BIT1 is turned ON by entering Ctrl.
(Note) Shift etc. indicated here are not the key names (buttons) on the NC keyboard, but indicated the ones by the key entry.
Ex.) When the MONITOR key is pressed, 112 is stored in LLPARAM and BIT0 for LUPARAM is turned ON.

Appendix 2.2 OnPress/OnRelease Arguments

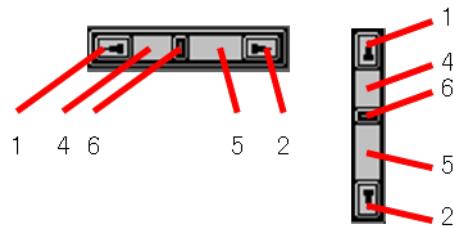

The mouse status stored in LLPARAM is always "0".

As for the XY coordinates stored in LUPARAM, the upper two bytes are the Y coordinate and the lower two bytes are the X coordinate. They can be acquired by the following macro code.

Item	Acquisition
X coordinate	LUPARAM & H0000FFFF
Y coordinate	(LUPARAM & HFFFF0000) >> 16

Appendix 2.3 OnScroll Arguments

The scroll method stored in LLPARAM shows where in the scroll bar is used to scroll. The scroll methods are as follows.

Value	Scroll method
1	Left-most, top arrow
2	Right-most, bottom arrow
4	Left, upper background
5	Right, lower background
6	Pinch

The scroll position stored in LUPARAM shows the top line on the page after the scroll.

Appendix 2.4 OnError Arguments

The error code list stored in LUPARAM is as follows.

Error code	Meaning
0	Other error
1	Input value error
2	Minimum value error
3	Maximum value error
4	Display length error

Revision History

Date of revision	Manual No.	Revision details
Jul. 2017	IB(NA)1501500-A	First edition created.
Feb. 2018	IB(NA)1501500-B	<ul style="list-style-type: none"> • Corresponded to NC Designer2 Ver.A4. • The following sections were changed. Precautions for Safety <ul style="list-style-type: none"> • Items in "Caution" were added. 5.22 CycleTime <ul style="list-style-type: none"> • "9: Cut time" was added. 5.29 NCAlarmList <ul style="list-style-type: none"> • The following functions were added.
