

三菱電機 汎用 ACサーボ MELSERVO-J4

MR-J4 サーボンプ 形名

- MR-J4-10 ~ MR-J4-22K
- MR-J4-60₄ ~ MR-J4-22K₄
- MR-J4-10₁ ~ MR-J4-40₁
- MR-J4W2-22B ~ MR-J4W2-1010B
- MR-J4W3-222B、MR-J4W3-444B
- MR-J4-03A6、MR-J4W2-0303B6

ACサーボを安全にお使いいただくために

三菱電機株式会社

〒100-8310 東京都千代田区丸の内2-3-3 (東京ビル)

定格名板

ここでは、定格名板の表示例を示して表示項目を説明します。

製造番号	SEK A3307001
型名	MR-J4-10B
仕様	100V 1.0kW 100mA 100mm
適用電圧	AC 100V
適用電流	100mA
適用トルク	100mNm
適用回転数	1000rpm
適用温度	0～40℃
適用湿度	5～95%RH
適用電圧変動	±10%
適用電圧変動	±10%
適用電圧変動	±10%
適用電圧変動	±10%
適用電圧変動	±10%

警告名板

警告名板の一例を示します。

形名

ここでは形名の内容を説明しています。すべての記号の組合せが存在するものではありません。

第1章 ユーザマニュアルについて

MELSERVO-J4シリーズを安全に使用するために、各技術資料を熟読してください。

1.1 MELSERVO-J4関連マニュアル

本書(MR-J4サーボンプの取付け)について説明しています。当社ウェブサイトからも無料でご覧いただけます。

1.2 本書の目的

本書は機械製造業者の技術者および機械のオペレータを対象とし、MR-J4サーボンプの安全操作について説明しています。

1.3 安全関連用語

2.1 安全に関する事項

2.2 設置

2.3 動作

2.4 動作

2.5 動作

2.6 動作

2.2 装置の用途

MR-J4サーボンプは次の規格に準拠しています。

2.3 正しい使い方

MR-J4サーボンプは仕様の範囲内で使用してください。

2.4 危険

2.5 周辺機器および電線選定

Instructions and Cautions for Safe Use of AC Servos

Table with columns for Country/Region, Sales office, and Tel/Fax. Lists contact information for USA, Germany, China, Korea, and Japan.

2.3 Correct use
Use the MR-J4 servo amplifiers within specifications. Refer to each instruction manual for specifications such as voltage, temperature, etc.

WARNING icon and text: If you need to get close to the moving parts of the machine for inspection or others, ensure safety by confirming the power off, etc.

2.3.1 Peripheral device and power wiring
The following are selected based on IEC/EN 61800-5-1, UL 508C, and CSA C22.2 No. 274.

Table 2. Recommended wires. Columns include Servo amplifier (Note 7), 75 °C/160 °C stranded wire (AWG) (Note 2), and Servo amplifier-side crimp terminals.

- 1. To connect these models to a terminal block, be sure to use the screws that come with the terminal block.
2. Alphabets in the table indicate crimping tools. Refer to table 2 for the crimp terminals and crimping tools.

(2) Selection example of MCCB and fuse
Use 1 class fuses or molded-case circuit breaker (UL 489 Listed MCCB) as the following table. The T class fuses and molded-case circuit breakers in the table are selected examples based on rated I/O of the servo amplifiers.

Table showing selection examples for MCCB and fuses for various servo amplifier models and power classes.

(3) Power supply
This servo amplifier can be supplied from star-connected supply with grounded neutral point of overvoltage category II (overvoltage category II for 1-phase servo amplifiers, MR-J4-03A6, and MR-J4W2-0303B6) set forth in IEC/EN 60664-1.

(4) Grounding
To prevent an electric shock, always connect the protective earth (PE) terminal (marked with the symbol) of the servo amplifier to the protective earth (PE) of the cabinet.

2.3.2 EU compliance
The EC directives were issued to standardize the regulations of the EU countries and ensure smooth distribution of safety-guaranteed products.

(1) EMC requirement
MR-J4 servo amplifiers comply with EN 61800-3. As for I/O wires (max. length 10 m. However, 3 m for STO cable for CN8), and encoder cables (max. length 50 m), use shielded wires and ground the shields.

(2) For Declaration of Conformity (DoC)
MITSUBISHI ELECTRIC EUROPE B.V. hereby declares that the servo amplifiers are in compliance with EC directives (Machinery directive (2006/42/EC), EMC directive (2014/30/EU), Low-voltage directive (2014/35/EU), and RoHS directive (2011/65/EU)).

2.3.3 USA/Canada compliance
This servo amplifier is designed in compliance with UL 508C and CSA C22.2 No. 274.

(1) Installation
The minimum cabinet size is 150% of each MR-J4 servo amplifier's volume. Also, design the cabinet so that the ambient temperature in the cabinet is 55 °C or less.

2.3.4 South Korea compliance
This product complies with the Radio Waves Act (KC mark). Please note the following to use the product. 이 기기는 전파규칙 (A) 조항의 저전력 무선기기로서 판매자 또는 사용자가 이 점을 주의하여야 하며, 가정용 지역에서 사용하는 것을 목적으로 합니다.

2.4 General cautions for safety protection and protective measures
Observe the following items to ensure proper use of the MR-J4 servo amplifiers.
(1) For safety components and installing systems, only qualified personnel and professional engineers should perform.

(4) Only qualified personnel are authorized to install, start-up, repair or service the machines in which these components are installed. Only trained engineers should install and operate the equipment. (ISO 13849-1: 2015 Table F.1 No. 5)

- (5) Separate the wiring for safety observation function from other signal wirings. (ISO 13849-1: 2015 Table F.1 No. 1)
(6) Protect the cables with appropriate ways (routing them in a cabinet, using a cable guard, etc.).
(7) Keep the required clearance/creepage distance depending on voltage you use.

2.6 Disposal
Disposal of unusable or irreparable devices should always occur in accordance with the applicable country-specific waste disposal regulations. (Example: European Waste 16 02 14)

2.7 Lithium battery transportation
To transport lithium batteries, take actions to comply with the instructions and regulations such as the United Nations (UN), the International Civil Aviation Organization (ICAO), and the International Maritime Organization (IMO).

3. Mounting/dismounting
Installation direction and clearances
The devices must be installed in the specified direction. Do not doing so may cause a malfunction.

CAUTION icon and text: The installation complies with IEC/EN 60204-1. The voltage supply to machines must be 20 mm or more of tolerance against instantaneous power failure as specified in IEC/EN 60204-1.

To adapt your machine using MR-J4-03A6 or MR-J4W2-0303B6 to IEC/EN 60950-1, either supply the amplifier with a power supply complying with the requirement of 2.5 stated in IEC/EN 60950-1 (Limited Power Source), or cover the amplifier and motors connected to the outputs with a fire enclosure.

4. Electrical Installation and configuration diagram
Turn off the molded-case circuit breaker (MCCB) to avoid electrical shocks or damages to the product before starting the installation or wiring.

CAUTION icon and text: The installation complies with IEC/EN 60204-1. The voltage supply to machines must be 20 mm or more of tolerance against instantaneous power failure as specified in IEC/EN 60204-1.

The following shows representative configuration examples to conform to the IEC/EN/UL/CSA standards.
(1) 3-phase input for MR-J4 1-axis (2) 1-phase input for MR-J4 1-axis (3) Main circuit 48 V DC input for MR-J4 1-axis servo amplifier

The connectors described by rectangles are safely separated from the main circuits described by circles. The connected motors will be limited as follows.

- (1) HG/HF/HG-HA series servo motors (Mfg.: Mitsubishi Electric)
(2) Using a servo motor complied with IEC 60034-1 and Mitsubishi Electric encoder (OBA, OSA)

5. Signals
5.1 Signal
The following shows MR-J4-10B signals as a typical example. For other servo amplifiers, refer to each servo amplifier instruction manual.

5.2 I/O device
The following shows MR-J4-10B signals as a typical example. For other servo amplifiers, refer to each servo amplifier instruction manual.

Tables for Input device and Output device signal pinouts, including STO and STO2 states.

5.3 Signals and STO state
The following table shows the STO1 and STO2 states when the power is on in normal state and STO1 and STO2 are on (closed) or off (opened).

Table showing STO1 and STO2 states for ON and OFF conditions.

6. Maintenance and service
6.1 Inspection items
It is recommended that the following points periodically be checked.
(1) Check for loose terminal block screws. Retighten any loose screws. (Except for MR-J4-03A6 and MR-J4W2-0303B6)

Table for Servo amplifier Tightening torque (N·m) for various components like EM2, STO1, STO2, etc.

- (2) Servo motor bearings, brake section, etc. for unusual noise.
(3) Check the cables and the links for scratches or cracks. Perform periodic inspection according to operating conditions.
(4) Check that the connectors are securely connected to the servo motor.
(5) Check that the wires are not coming out from the connector.
(6) Check for dust accumulation on the servo amplifier.
(7) Check for unusual noise generated from the servo amplifier.
(8) Check the servo motor shaft and coupling for connection.
(9) Make sure that the emergency stop circuit operates properly such that an operation can be stopped immediately and a power is shut off by the emergency stop switch.

6.2 Parts having service life
Service life of the following parts is listed below. However, the service life varies depending on operation and environment. If any fault is found in the parts, they must be replaced immediately regardless of their service life. For parts replacement, please contact your local sales office.

Table for Part name and Life guideline for components like Smoothing capacitor, Relay, Cooling fan, Battery backup time, and Battery life.

Note: 1. The time is in using MR-J4 1-axis servo amplifier with an rotary servo motor using MR-BATV1SET, MR-BATV1SET-A, or MR-BATV1BU. For details and other battery backup time, refer to each instruction manual.
2. Quality of the batteries degrades by the storage condition. The lifetime is 5 years from the production date regardless of the connection status.

7. Transportation and storage
Transport the products correctly according to their mass.
Stacking in excess of the limited number of product packages is not allowed.
or detailed information on transportation and handling of the battery, refer to the servo amplifier instruction manual.

CAUTION icon and text: Install the product in a load-bearing place of servo amplifier and servo motor in accordance with the instruction manual. Do not put excessive load on the machine. Do not hold the front cover, cables, or connectors when carrying the servo amplifier. Otherwise, it may drop.

Table for When you keep or use it, please fulfill the following environment. Columns include Environment (Temperature, Humidity, Vibration, Pollution degree, etc.) and Item.

8. Technical data

Table 8.1 MR-J4 servo amplifier. Columns include Item, Main circuit (line voltage), Control circuit (line voltage), Power supply, Control method, Safety observation function (STO), Mean time to dangerous failure (MTTFd), Diagnostic coverage (DC), Response performance, Pollution degree, Overvoltage category, Protective class, and Short-circuit current rating (SCCR).

Note: 1. For the use in US/Canada, constitute a branch circuit including the power supply which ensures SCCR of 5A minimum in the industrial cabinet.
2. MR-J4-03A6 also supports a power supply of 200 V DC to 360 V DC.
3. Servo amplifiers manufactured in June 2015 or later comply with SIL 3 requirements. However, MR-J4-03A6, MR-J4W2-0303B6, and MR-J4-03A6 are not included in this list.

8.2 Dimensions/mounting hole process drawing

Table showing dimensions (W, H, D) and mass (kg) for various servo amplifier models.

Note: The value in the parenthesis shows the value of MR-J4-GF.
The following table shows the variable dimensions (mm) for MR-J4-03A6.

Table showing variable dimensions (mm) for MR-J4-03A6 servo amplifier across different models.

9. Check list for user documentation

MITSUBISHI ELECTRIC
MR-J4 installation checklist for manufacturer/installer
The following items must be satisfied by the initial test operation at least. The manufacturer/installer must be responsible for checking the standards in the items.

- Maintain and keep this checklist with related documents of machines to use this for periodic inspection.
1. Is it based on directive/standard applied to the machine? Yes [] No []
2. Is directive/standard contained in Declaration of Conformity (DoC)? Yes [] No []
3. Does the protection instrument conform to the category conformity? Yes [] No []
4. Are electric shock protective measures (protective class) effective? Yes [] No []
5. Is the STO function checked (test of all the shut-off wiring)? Yes [] No []

Checking the items will not be instead of the first test operation or periodic inspection by professional engineers.

[Warranty]

1. Warranty period and coverage
We will warranty any failure or defect hereinafter referred to as "failure" in our FA equipment hereinafter referred to as the "Product" arisen during warranty period at no charge due to causes for which we are responsible through the distributor from which you purchased the Product.

[Term]
For terms of warranty, please contact your original place of purchase.

[Limitations]
(1) You are requested to conduct an initial failure diagnosis by yourself, as a general rule. It can also be carried out by us or our service company upon your request and the actual cost will be charged. However, it will not be charged if we are responsible for the cause of the failure.

(2) This limited liability applies only when the condition, method, environment, etc. of use are in compliance with the terms and conditions and instructions that are set forth in the instruction manual and user manual for the Product and the caution label affixed to the Product.

(3) Even during the term of warranty, the repair cost will be charged on you in the following cases.
(i) a failure caused by your improper storing or handling, carelessness or negligence, etc., and a failure caused by your hardware or software problem
(ii) a failure caused by any alteration, etc. to the Product made on your side without our approval
(iii) a failure which may be regarded as avoidable, if your equipment in which the Product is incorporated is equipped with a safety device required by applicable laws and has any function or structure considered to be indispensable according to a common sense in the industry
(iv) a failure which may be regarded as avoidable if consumable parts designated in the instruction manual, etc. are duly maintained and replaced
(v) any replacement of consumable parts (battery, fan, smoothing capacitor, etc.)
(vi) a failure caused by external factors such as inevitable accidents, including without limitation fire and abnormal fluctuation of voltage, and acts of God, including without limitation earthquake, lightning and natural disasters
(vii) a failure generated by an unforeseeable cause with a scientific technology that was not available at the time of the shipment of the Product from our company

(viii) any other failures which we are not responsible for or which you acknowledge we are not responsible for

2. Term of warranty after the stop of production
(1) We may accept the repair at charge for another seven (7) years after the production of the product is discontinued. The announcement of the stop of production for each model can be seen in our Sales and Service, etc.
(2) Please note that the Product (including its spare parts) cannot be ordered after its stop of production.

3. Service in overseas countries
Our regional FA Center in overseas countries will accept the repair work of the Product. However, the terms and conditions of the repair work may differ depending on each FA Center. Please ask your local FA Center for details.

4. Exclusion of loss in opportunity and secondary loss from warranty liability
Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:
(1) Damages caused by any cause found not to be the responsibility of Mitsubishi.
(2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.
(3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.
(4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

5. Change of Product specifications
Specifications listed in our catalogs, manuals or technical documents may be changed without notice.

6. Application and use of the Product
(1) For the use of our AC Servo, its applications should be those that may not result in a serious damage even if any failure or malfunction occurs in AC Servo, and a backup or fail-safe function should operate on an external system to AC Servo when any failure or malfunction occurs.
(2) Our AC Servo is designed and manufactured as a general purpose product for use at general industries. Therefore, applications substantially influential on the public interest for such as atomic power plants and other power plants of electric power companies, and also which require a special quality assurance system, including applications for railway companies and government or public offices are not recommended, and we assume no responsibility for any failure caused by these applications when used.

In addition, applications which may be substantially influential to human lives or properties for such as airlines, medical treatments, railway service, incineration and fuel systems, man-operated material handling equipment, entertainment machines, safety machines, etc. are not recommended, and we assume no responsibility for any failure caused by these applications when used.

We will review the acceptability of the abovementioned applications, if you agree not to require a specific quality for a specific application. Please contact us for consultation.
