

MITSUBISHI INDUSTRIAL ROBOT

RV-1A/2AJ Replacement Guide

"Replace. Change. Expand."

Passing the relay torch to the RV-1A/2AJ
created for full-scale industries.

■ This guide explains the replacement of the conventional
"MOVEMASTER RV-M1 and RV-M2" to the new "RV-1A/2AJ".

Mitsubishi Electric Corporation Nagoya Works is a factory certified for ISO14001 (standards for environmental management systems) and ISO9001 (standards for quality assurance management systems)

Progress

Succession

- Changes.
- No changes.

The Mitsubishi Electric compact robot "MOVEMASTER" has been reborn as the "MELFA RV-1A/2AJ" for full-scale industries.

Here's your chance to replace your robots.

1 Compatibility

Increased build installation surface is the same

2 Compatibility

Programs using MOVEMASTER language can be used

	<div>RV-M1 5 axis</div> <div>➡</div> <div>RV-2AJ 5 axis</div> <div>Compatibility</div>		<div>RV-M2 5 axis</div> <div>➡</div> <div>RV-2AJ 5 axis</div> <div>Compatibility</div>		<div>RV-M1 5 axis RV-M2 5 axis</div> <div>➡</div> <div>RV-1A 6 axis</div> <div>Compatibility</div>					
Max. weight capacity	1.2kg	2kg	◎	2kg	Same as left	○	M1	1.2kg	1.5kg	◎
Same as left	410mm	Same as left	○	635mm	410mm	△	M2	2kg	1.5kg	△
Mechanism installation surface dimensions (screw size)	160×205mm (M8)	Same as left	○	160×205mm (M8)	Same as left	○	M1	410mm	418mm	○
Hand installation surface (screw size)	PC φ 68×4 screws (M3)	PC φ 68×4 screws (M3) Adaptor required [*1]	○	PC φ 31.5×4 screws (M5) Adaptor not required	Same as left	○	M2	635mm	418mm	△
							M1 M2	160×205mm (M8)	Same as left	○
							M1	PC φ 68×4 screws (M3)	PC φ 68×4 screws (M3) Adaptor required [*1]	○
							M2	PC φ 31.5×4 screws (M5)	PC φ 31.5×4 screws (M5) Adaptor not required	○

[*1] Surface when hand adaptor (1A-HA01) <option> is installed. Surface is PC φ 31.5 x 4 (M5) when adaptor is not used.
Compatibility: ◎ Increases. ○ Is the same. △ Is smaller.

Program	Use possible through personal computer. [*2]
Teaching work	Teaching must be carried out again.
Input/output signals	Wiring on peripheral device side must be changed. [*3]

[*2] Slight changes are required for the speed setting value and assignment of the input/output signals, etc. Refer to the back page for details.
[*3] Changes are required as the pin assignments for the power line and GND (ground) line, etc., are different.

3 Improved robot arm

Performance and serviceability are greatly improved

4 Lightweight and compact

Pursuing smaller and lighter robot

5 Enhanced controller

Powerful open-ended 64-bit CPU

6 Environment and safety

Contributing to energy conservation
Considerate of safety and environment

	RV-M1 5 axis	RV-M2 5 axis
Drive method	DC servomotor	
Position detection method	Incremental encoder	
Incremental encoder	1000mm/s	1500mm/s
Position repeatability	±0.3mm	±0.1mm
6-axis specifications	Not available	

	RV-1A 6 axis	RV-2AJ 5 axis
Drive method	AC servomotor	
Position detection method	Absolute encoder	
Incremental encoder	2200mm/s	2100mm/s
Position repeatability	±0.02mm	
6-axis specifications	Available (RV-1A)	

- Brush replacement not required
- Origin setting not required
- Improved productivity (reduced tact time)
- Expanded applications to precision work
- Detailed work possible

1.4 to 2 times compared to conventional model

5 to 15 times compared to conventional model

Robot arm weight	19kg	28kg
Controller	Approx. 25kg	
Weight	Approx. 380 (W) × 330 (D) × 246 (H) mm	
Size		

Robot arm weight	19kg	17kg
Controller	Approx. 8kg	
Weight	Approx. 212 (W) × 290 (D) × 151 (H) mm	
Size		

- Lightweight
- Portable
- Compact

One-third compared to conventional model

CPU	8bit	16bit
Program language	MOVEMASTER language	
Interface	RS232C, RS422	

CPU	64bit	
Program language	MOVEMASTER language or MELFA BASIC IV	
Interface	RS-232-C, RS-422, hand expansion slot, expansion slot [*1], robot input/output link	

- Improved processing performance
- Easier to use
- Improved expansion performance and ease of use

[*1] Up to three option cards can be mounted when expansion option box (CR1-EB3) <option> is installed.

Motor capacity	Axis maximum	30w	60w
	Total capacity	112w	206w
Basic motor capacity [*3]		93w/ (kg·m/s)	68w/ (kg·m/s)
Deadman safety function	Not available		
Arm cable treatment	Some external cables (shoulder section) Internal		

Motor capacity	50w	
	195w	180w
Basic motor capacity	59w/kg·ms	43w/kg·ms
Deadman safety function	3-position type [*4]	
Arm cable treatment	Internal	

- Less than 80w [*2]
- Safe and energy conserving
- Reduced consumed power during production
- Importance laid on safety
- Safe and guarded

[*2] This does not apply to the "industrial robot" as specified by the Occupational Safety and Sanitation Rules Ordinance 36 Clause 31, but safety measures must be taken before use.

[*3] The basic motor capacity is a reference value calculated as total motor capacity/(max. weight capacity x max. composite speed).

[*4] This is valid when the teaching box (R28TB) <option> is used.

RV-M1 and RV-2AJ have same arm length, and cables at shoulder are laid inside.

Shoulder section

Mitsubishi Industrial Robot RV-1A/2AJ Replacement Guide

■ Example of program conversion: Replacement of <RV-M1> with <RV-2AJ>

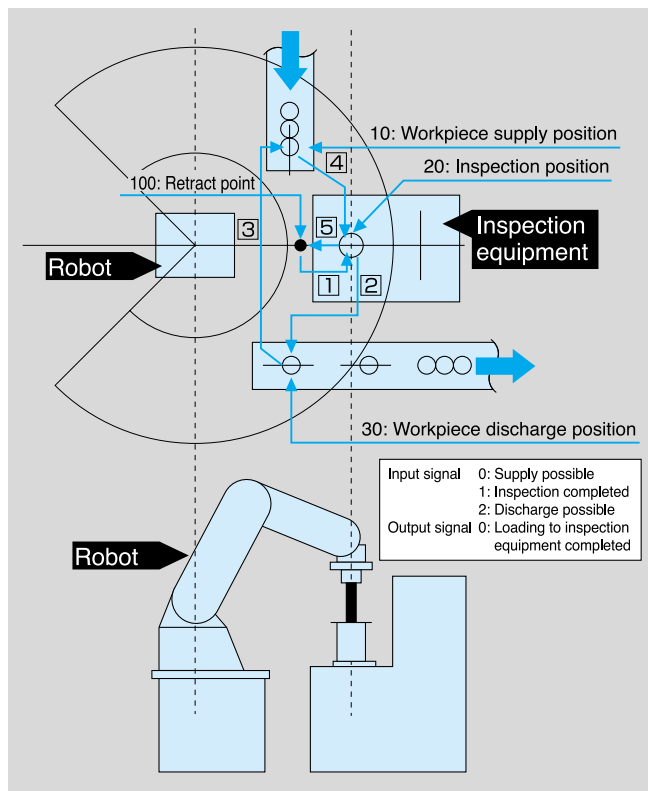

Details of work

Loading and unloading of workpiece from conveyor to inspection equipment.

Movement pattern

- ① Move from retract point (100) to inspection equipment (20), and unload inspected workpiece.
 - ② Carry inspected workpiece to discharge conveyor (30).
 - ③ Move to uninspected workpiece unloading position (10).
 - ④ Unload workpiece, and move to over inspection equipment (20).
 - ⑤ Set workpiece on inspection equipment (20), and return to retract point (100).
- When inspection complete signal is input, process starts again from step ①.)

● Explanation

- 1) The speed set with the SP command differs according to the model. Change the value set for the SP command.
- 2) Adjust the input/output signal numbers according to the actual wiring.
With the RV-2AJ, the bit 0 of the input signal is used as the stop input.
If used for other applications, the setting must be changed.
- 3) If the MS command (linear interpolation) is designated as a No. of divisions, delete the No. of divisions.

<Supplement>

- The input/output commands (IN) that use synchronous signals must be replaced with ID, OD, TB, etc.
- The RV-M1 and RV2AJ have different robot coordinate systems. The position data must be corrected.
