1. General Description

This manual describes the programming methods that should be created by the user for monitoring measurement value of Energy Measuring Unit (called Measuring Unit from here on) with the CC-Link (in remote net ver2 mode or remote net additional mode). In programming, read the following related manuals in addition to this manual.

Table 0.1 Related Manual

| Manual Name | Manual No. |
|--------------------------------------------------------------------|---------------------------------------|
| CC-Link System Master/Local Module User's Manual type QJ61BT11N | SH-080394E (13JR64) |
| MELSEC-L CC-Link System Master/Local Module User's Manual | SH-080895ENG (13JZ41) |
| User's Manual for Measuring Unit | Supplied with product or download. |

NOTICE

When using EcoMonitorLight (EMU4-BD1-MB, EMU4-HD1-MB, EMU4-BD1A-MB, EMU4-HD1A-MB) or EcoMonitorPlus (EMU4-BM1-MB, EMU4-HM1-MB, EMU4-LG1-MB, EMU4-CNT-MB), Optional Plug-in Module "EMU4-CM-C" is necessary. CC-Link communication is not available without the optional plug-in module. In this manual, EcoMonitorLight (EMU4-BD1-MB, MU4-HD1-MB, EMU4-BD1A-MB, MU4-HD1A-MB), EcoMonitorPlus(EMU4-BM1-MB, EMU4-HM1-MB, EMU4-LG1-MB, EMU4-CNT-MB) means the main device of EMU4 with the optional plug-in module.

POINT

The EMU4-BD1-MB,EMU4-HD1-MB, EMU4-BD1A-MB,EMU4-HD1A-MB,EMU4-BM1-MB,EMU4-HM1-MB,EMU4-LG1, EMU4-CNT-MB,EMU4-A2,EMU4-VA2 must be handled after setting of the remote device station version.

Set the remote device station version with the "Setting Menu 7" of the EMU4-BD1-MB,EMU4-HD1-MB,EMU4-BD1A-MB, EMU4-HD1A-MB,EMU4-BM1-MB,EMU4-HM1-MB, EMU4-LG1,EMU4-CNT-MB,EMU4-A2,EMU4-VA2.

Use the following as a guideline in setting the remote device station version and set the version at Energy measuring unit.

| Mode select setting | Guideline for selection |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Ver.1 remote device station (Ver.1 compatible slave station) | Select this when utilizing the conventional program, because of compatibility with EcoMonitorPro,EMU3-DP1-C. |
| Ver.2 remote device station (Ver.2 compatible slave station) | Select this when configuring a new system or the being newly added to the existing system in combination with the applicable master module. |

This programming manual is for ver.2 remote device station.

For use in the ver.1 remote device station (Ver.1 compatible slave station), refer to the following manual.

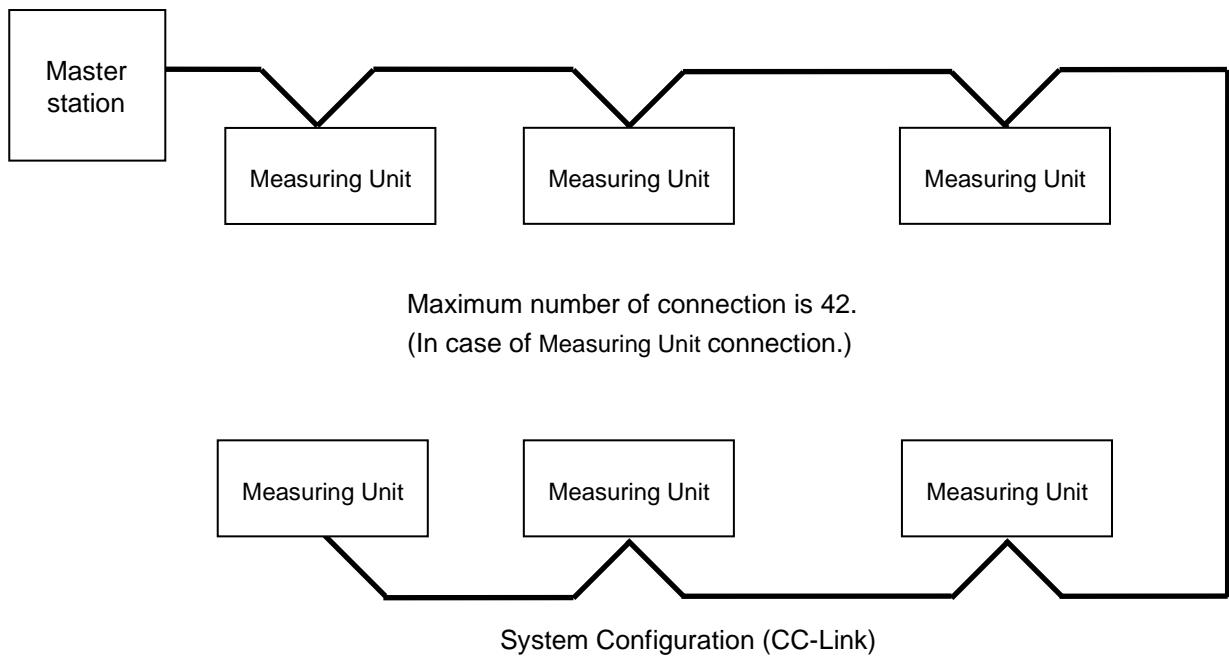

•Energy Measuring Unit Programming Manual (CC-Link)(For ver.1 remote device station) LEN160305

2. Specification

CC-Link specification is shown in Table 2.1 when Measuring Unit is set the "Ver2.00" (ver.2 remote device station).

Table 2.1 CC-Link Specification (For Ver2.00)

| Item | Specification |
|-----------------------------------------------|--------------------------------------------------------------------------------------------------|
| CC-Link station type | Remote device station (ver.2 remote device station) |
| Number of occupied stations | 1 station (Expanded cyclic setting: Octuplet) |
| Maximum number of stations per master station | 42 stations (In case of connecting only remote device station occupied by 1 station (Octuplet).) |
| Transmission speed | 156kbps/625kbps/2.5Mbps/5Mbps/10Mbps |
| Remote I/O (RX, RY) | 128 points each |
| Remote register (RWw, RWr) | 32 points each |

<Reference> Communication time

The following shows the communication time required when one measurement element is acquired from the measurement unit.

<In case of EcoMonitorLight>

| Transmission speed | Communication time |
|--------------------|--------------------|
| 156kbps | 67.00 ms |
| 10Mbps | 38.00 ms |

<In case of EcoMonitorPlus (Basic unit : Other than EMU4-CNT-MB)>

| Transmission speed | Target to acquire measurement element | Communication time |
|--------------------|---------------------------------------|--------------------|
| 156kbps | Basic unit | 130.00 ms |
| | Extension unit | 114.00 ms |
| 10Mbps | Basic unit | 95.00 ms |
| | Extension unit | 98.00 ms |

<In case of EcoMonitorPlus (Basic unit : EMU4-CNT-MB)>

| Transmission speed | Target to acquire measurement element | Communication time |
|--------------------|---------------------------------------|--------------------|
| 156kbps | Basic unit | 94.00 ms |
| | Extension unit | 95.00 ms |
| 10Mbps | Basic unit | 62.00 ms |
| | Extension unit | 62.00 ms |

The above-mentioned data is a reference value, transmission time is not guaranteed.

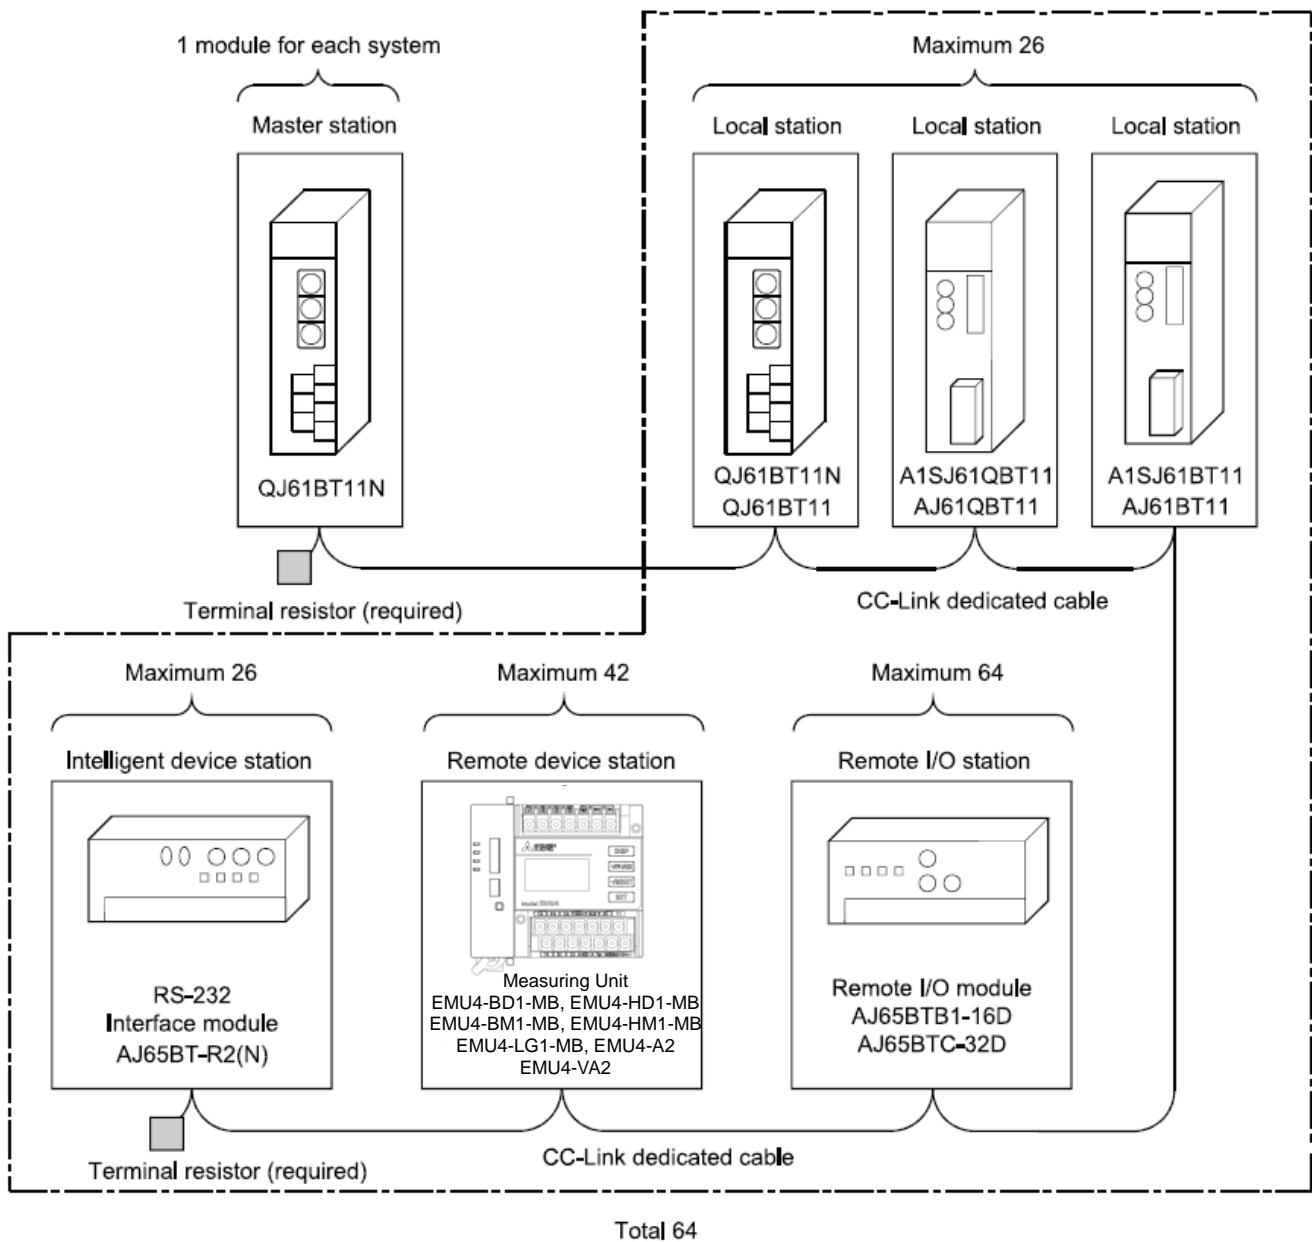

3. Configuration Conditions of CC-Link System

3.1 Remote net ver.2 mode, remote net additional mode

A total of 64 remote I/O stations, remote device stations, local stations, standby master stations, or intelligent device stations can be connected to a single master station.

However, the following conditions must all be satisfied.

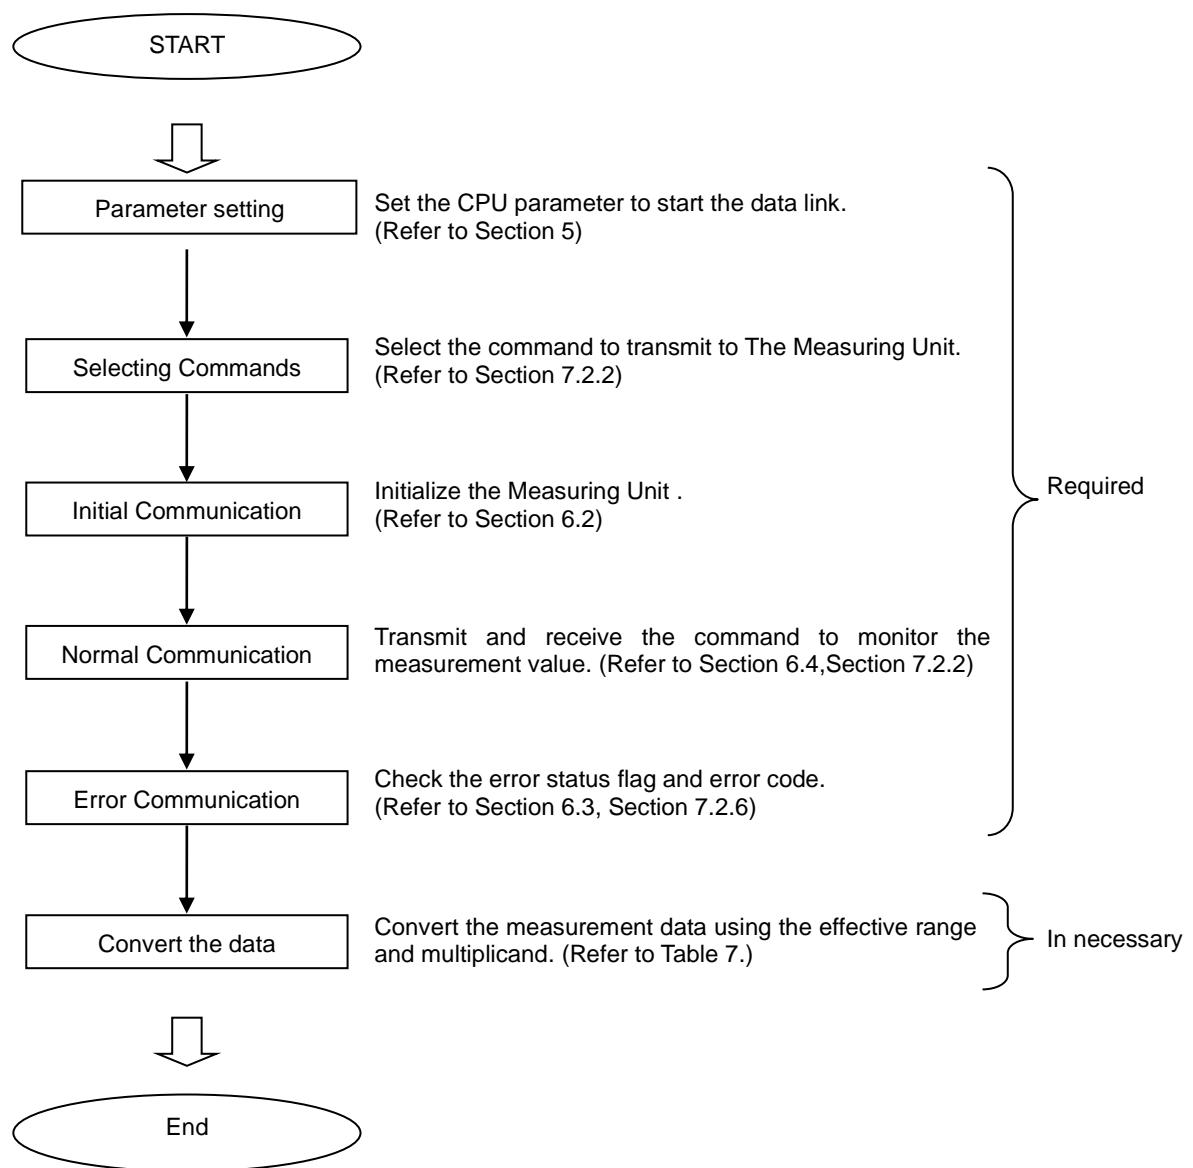

| | | |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Condition 1 | $\{(a+a2+a4+a8) + (b+b2+b4+b8) \times 2 + (c+c2+c4+c8) \times 3 + (d+d2+d4+d8) \times 4\} \leq 64$ | a: The total number of ver.1 compatible slave stations that occupy 1 station, and ver.2 compatible slave stations that occupy 1 station which are set to "Single". b: The total number of ver.1 compatible slave stations that occupy 2 stations, and ver.2 compatible slave stations that occupy 2 stations which are set to "Single". c: The total number of ver.1 compatible slave stations that occupy 3 stations, and ver.2 compatible slave stations that occupy 3 stations which are set to "Single". d: The total number of ver.1 compatible slave stations that occupy 4 stations, and ver.2 compatible slave stations that occupy 4 stations which are set to "Single". |
| Condition 2 | $\{[(a \times 32) + (a2 \times 32) + (a4 \times 64) + (a8 \times 128)] + [(b \times 64) + (b2 \times 96) + (b4 \times 192) + (b8 \times 384)] + [(c \times 96) + (c2 \times 160) + (c4 \times 320) + (c8 \times 640)] + [(d \times 128) + (d2 \times 224) + (d4 \times 448) + (d8 \times 896)]\} \leq 8192$ | a2: The number of ver.2 compatible stations that occupy 1 station which are set to "Double". b2: The number of ver.2 compatible stations that occupy 2 stations which are set to "Double". c2: The number of ver.2 compatible stations that occupy 3 stations which are set to "Double". d2: The number of ver.2 compatible stations that occupy 4 stations which are set to "Double". a4: The number of ver.2 compatible stations that occupy 1 station which are set to "Quadruple". b4: The number of ver.2 compatible stations that occupy 2 stations which are set to "Quadruple". c4: The number of ver.2 compatible stations that occupy 3 stations which are set to "Quadruple". d4: The number of ver.2 compatible stations that occupy 4 stations which are set to "Quadruple". a8: The number of ver.2 compatible stations that occupy 1 station which are set to "Octuplet". (Energy measuring unit is applied) b8: The number of ver.2 compatible stations that occupy 2 stations which are set to "Octuplet". c8: The number of ver.2 compatible stations that occupy 3 stations which are set to "Octuplet". d8: The number of ver.2 compatible stations that occupy 4 stations which are set to "Octuplet". |
| Condition 3 | $\{[(a \times 4) + (a2 \times 8) + (a4 \times 16) + (a8 \times 32)] + [(b \times 8) + (b2 \times 16) + (b4 \times 32) + (b8 \times 64)] + [(c \times 12) + (c2 \times 24) + (c4 \times 48) + (c8 \times 96)] + [(d \times 16) + (d2 \times 32) + (d4 \times 64) + (d8 \times 128)]\} \leq 2048$ | A: Number of remote I/O stations ≤ 64 B: Number of remote device stations ≤ 42 (Measuring Unit is applied.) C: Number of local stations, standby master stations and intelligent device stations ≤ 26 |
| Condition 4 | $\{(16 \times A) + (54 \times B) + (88 \times C)\} \leq 2304$ | |

4. Programming

4.1 Programming Procedure

Create a program which executes the “Monitoring of the measurement values” by following the procedure below:

5. Parameter Settings

5.1 Procedure from Parameter Settings to Data Link Startup

The following explains the procedure from setting the parameters to starting the data link.

5.1.1 CPU Parameter Area and Master Module Parameter Memory

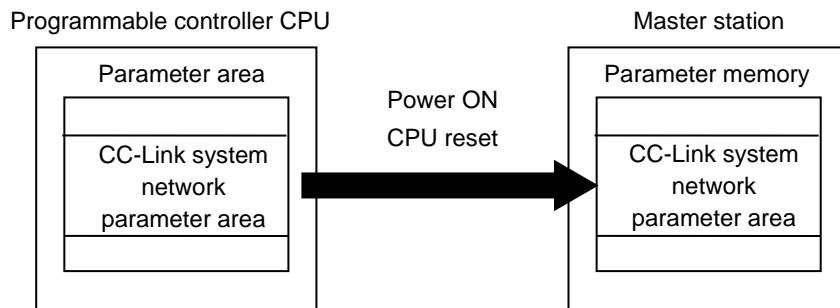

(1) CPU Parameter Area

This area is used to set the basic values for controlling the programmable controller system and the network parameters that control the CC-Link system.

(2) Master Station Parameter Memory

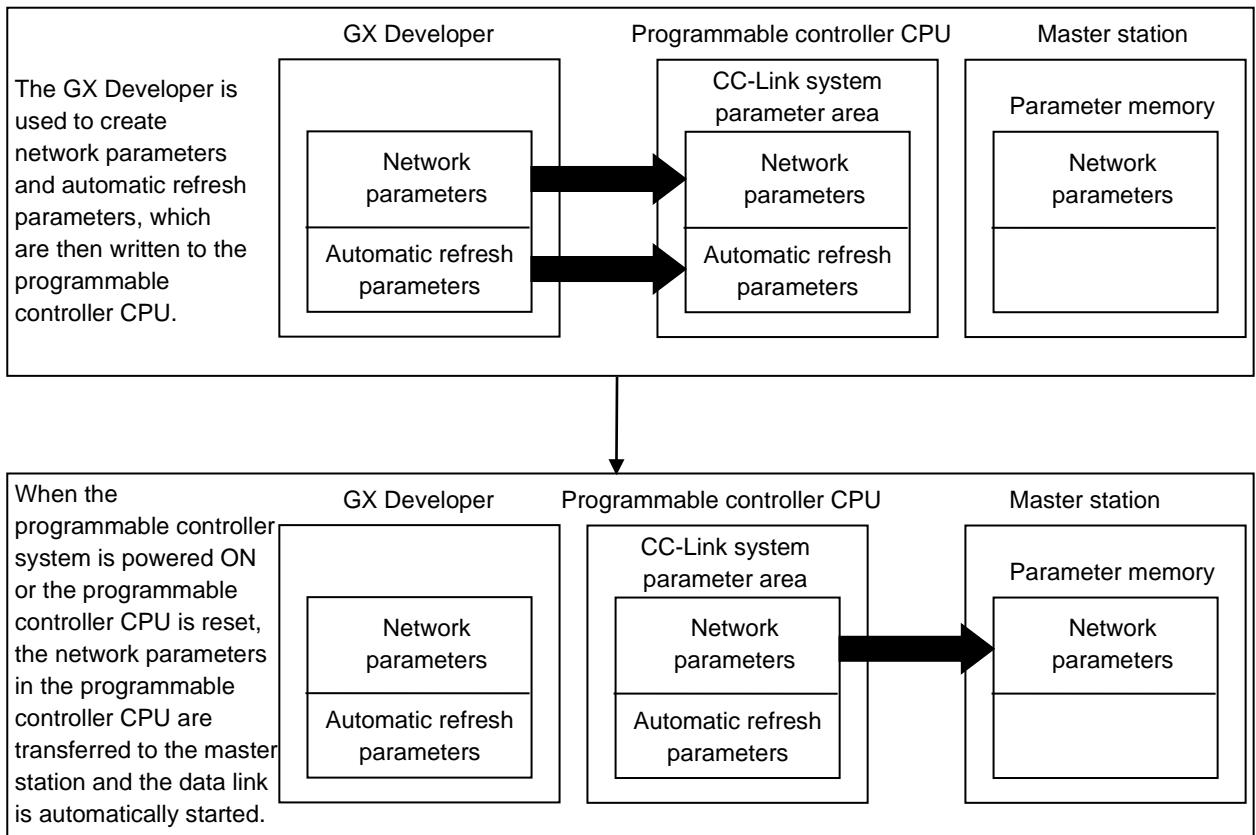

This area stores the network parameters for the CC-Link system.

When the module is powered OFF or the programmable controller CPU is reset, the network parameters are erased.

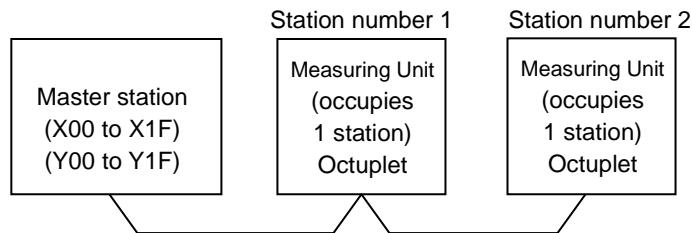

5.1.2 Procedure for Parameter Settings to Data Link Startup with GX Developer

Follow the procedure below for parameter settings to data link startup:

5.2 Example of Parameter Settings with GX Developer (Remote net ver.2 mode)

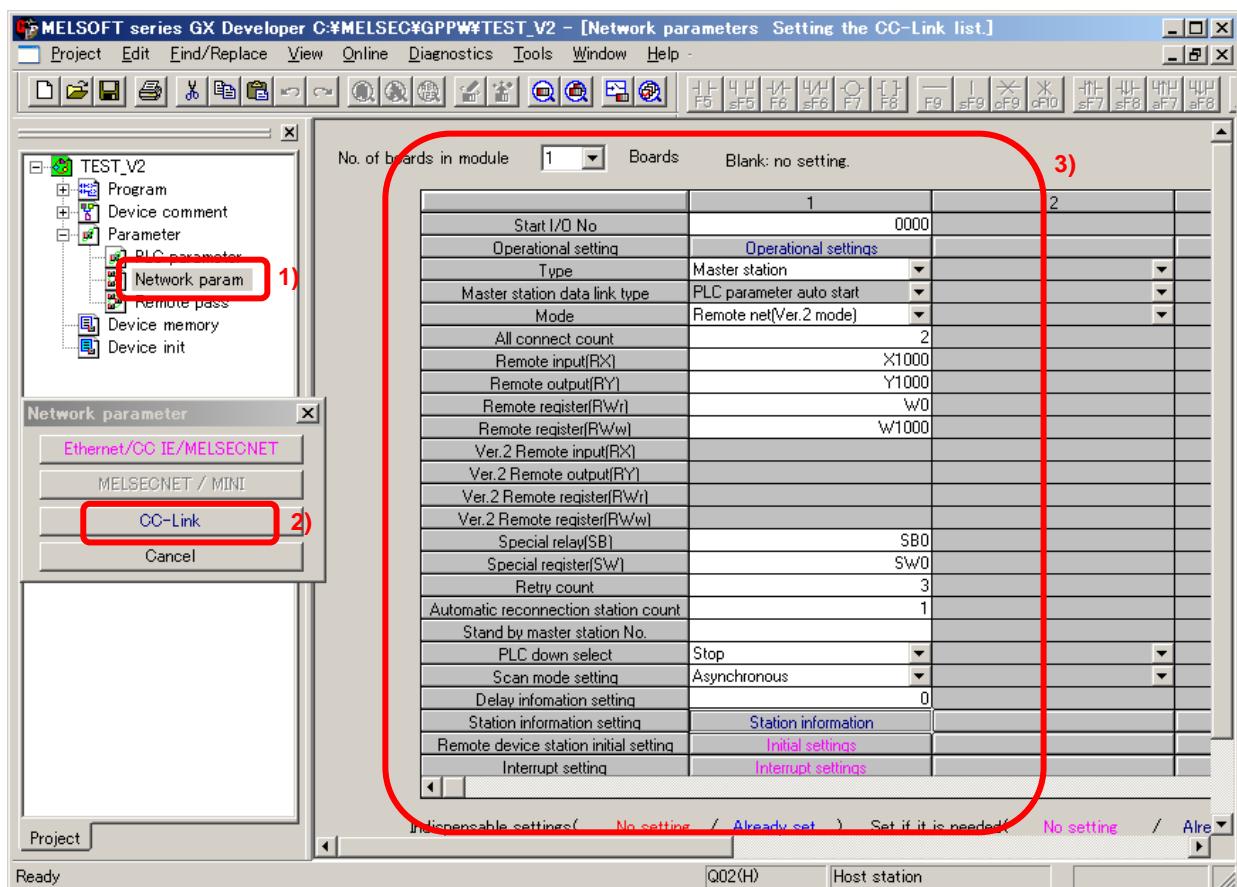

This section explains the parameter settings using the GX Developer. For more details on the GX Developer operation, refer to the GX Developer Operating Manual. The explanations in this section are based on the following example of the system configuration.

5.2.1 Master Station Network Parameter Settings

- 1) Double-click on the “Network param”.
- 2) Click on the “CC-Link” on the “Network parameter” screen.
- 3) Set the parameters as required.

The following describes an example of the parameter settings.

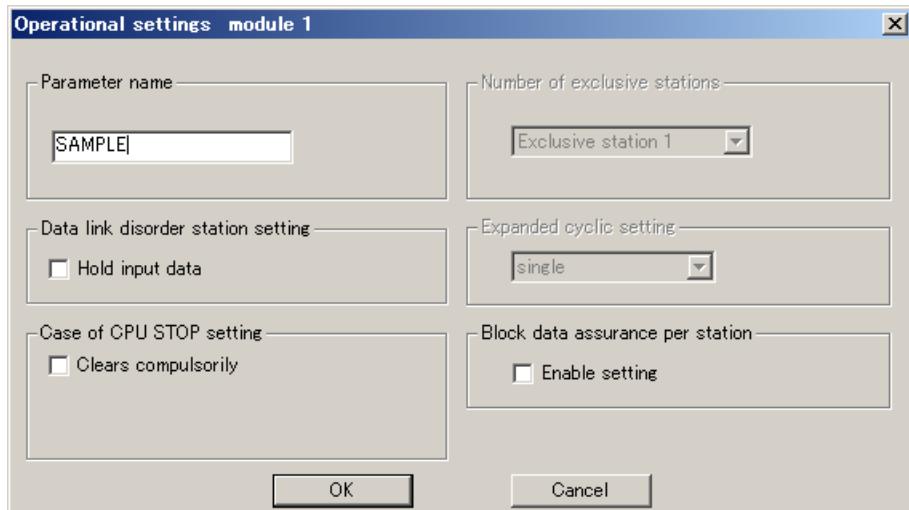

| Setting Item | Description | Example for settings | Remarks |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| No.of boards in module | Set the "No. of boards in module" for which the network parameters are to be set. | 1 | |
| Start I/O No | Set the "Start I/O No." for the master station. | 0000 | Set the same setting of Start XY in PC parameters setting. |
| Operational settings | Set the following: ·Parameter name ·Data link err station setting ·Case of CPU Stop setting ·Block data assurance per station | Refer to next page | Even if the Parameter name is not set, this will not affect the operation of the CC-Link system |
| Type | Set the station type. | Master station | |
| Mode | Set the CC-Link mode. | Remote net (Ver.2 mode) | "Remote net ver.2 mode" and "Remote net additional mode" can be also used in case of the QJ61BT11N. |
| All connect count | Set the total number of connected stations in the CC-Link system including reserved stations. | 2 (modules) | Set the total number of connected stations in the CC-Link system including reserved stations. |
| Remote input (RX) | Set the remote input (RX) refresh device. | X1000 | Device name - Select from X, M, L, B, D, W, R or ZR. Device number - Within the range of the device points that the CPU has. |
| Remote output (RY) | Set the remote output (RY) refresh device. | Y1000 | Device name - Select from Y, M, L, B, T, C, ST, D, W, R or ZR. Device number - Within the range of the device points that the CPU has. |
| Remote register (RW _r) | Set the remote register (RW _r) refresh device. | W0 | Device name - Select from M, L, B, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has. |
| Remote register (RW _w) | Set the remote register (RW _w) refresh device. | W1000 | Device name - Select from M, L, B, T, C, ST, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has. |
| Special relay (SB) | Set the link special relay (SB) refresh device. | SB0 | Device name - Select from M, L, B, D, W, R, SB or ZR. Device number - Within the range of the device points that the CPU has. |
| Special register (SW) | Set the link special register (SW) refresh device. | SW0 | Device name - Select from M, L, B, D, W, R, SW or ZR. Device number - Within the range of the device points that the CPU has. |
| Retry count | Set the number of retries for "Retry count", when a communication error occurs. | 3 | |
| Automatic reconnection station count | Set the number of modules that can return to system operation by a single link scan. | 1 | |
| Standby master station No. | Set the station number for the standby master station | Blank | Blank: No standby master station specified. |
| PLC down select | Set the data link status for "PLC down select", when a master station programmable controller CPU error occurs. | Stop | |
| Scan mode setting | Set whether the link scan for the sequence scan is synchronous or asynchronous. | Asynchronous | |
| Delay information setting | Set for the link scan delay time. | 0 | Unit:50 μs |
| Station information settings | Set the station data. | Refer to the next page. | |

POINT

- (1) For the automatic refresh parameter setting, set the start device only. Devices are automatically assigned until the last station number including reserved stations and occupied stations.
 In the example of the system configuration in this section, the last station number is "2". Therefore, total of remote I/O points is 256 points ($128 \times 2 = 256$) and total of remote registers points is 64 points ($32 \times 2 = 64$). If refresh device of remote input (RX) is set to "X1000" and that of remote registers (RWr) is set to "W0", the end devices will be "X10FF" and "W3F" respectively.
- (2) When setting X, Y, B, W, SB and SW as refresh devices, make setting so that they do not overlap with the device numbers used on the other networks, etc.

《Example for Operational settings》

| Setting Item | Description | Example for settings | Remarks |
|------------------------------------|---------------------------------------------------------------------------------------------|---------------------------------------------|-------------------------------------------------------------------------------------------------|
| Parameter name | Set the Parameter name. | "SAMPLE" | Even if the Parameter name is not set, this will not affect the operation of the CC-Link system |
| Data link disorder station setting | Set the input status for the data link error station. | Clear ("Hold input data" not checked) | |
| Case of CPU Stop setting | Set the slave station refresh/compulsory clear setting at programmable controller CPU STOP. | Refresh ("Clears compulsorily" not checked) | |
| Block data assurance per station | Set the block guarantee of cyclic data per station. | Disable ("Enable setting" not checked) | |

《Example for Station information settings》

CC-Link station information Module 1

| Station No. | Station type | Expanded cyclic setting | Exclusive station count | Remote station points | Reserve/invalid station select | Intelligent buffer select(word) | | |
|-------------|-----------------------------|-------------------------|-------------------------|-----------------------|--------------------------------|---------------------------------|---------|-----------|
| | | | | | | Send | Receive | Automatic |
| 1/1 | Ver.2 Remote device station | octuple | Exclusive station 1 | 128 points | No setting | | | |
| 2/2 | Ver.2 Remote device station | octuple | Exclusive station 1 | 128 points | No setting | | | |

Default Check End Cancel

| Setting Item | Description | Example for settings | Remarks |
|---------------------------------|-----------------------|-----------------------------|-------------------------------------------------------------|
| Station type | Set the station data. | Ver2. Remote device station | Set the "ver2.00" in Setting Menu 7 of Measuring Unit. |
| Expanded cyclic setting | | octuplet | Measuring Unit cannot use other than "octuplet". |
| Number of occupied stations * | | Occupies 1 station | Set the "Occupies 1 station" in case of the Measuring Unit. |
| Remote station points | | 128 points | Set the "128 points" in case of the Measuring Unit. |
| Reserved/invalid station select | | No setting | |

* "Number of exclusive stations" on the screen is described as "Number of occupied stations" in this manual.

"Exclusive station 1" on the screen is described as "Occupies 1 station" in this manual

6. Communication Between the Master Station and Measuring Unit

6.1 Communication Guideline

There are three communication statuses (Initial Communication, Normal Communication, and Error Communication) between the Master station and Measuring Unit.

In the normal communication, alarm status and digital input status of Measuring Unit can be monitored using bit data (remote input RX). Furthermore, the following can be performed by using remote input, remote output and remote registers.

- Monitoring by Pattern
- Monitoring by Command (1H).
- Setting by Command (2H).

For a monitoring by pattern, some measuring values can be monitored by selecting a bit of RY. Measuring values which can be monitored have been already grouping in Measuring Unit in advance. Please select the necessary group in a bit of RY.

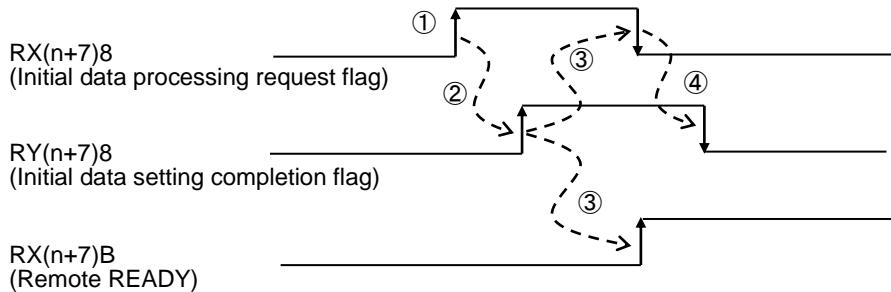

For a monitoring by command (1H), you can select any measurement items to be monitored. Measuring Unit has unique codes (called unit No., group No. and channel No.) for each measurement items. You can monitor the selected measurement items by writing these codes to the remote registers.

For a setting by command (2H), you can set for Measuring Unit settings.

* All measuring items can be monitored even when it is not displayed in Measuring Unit.

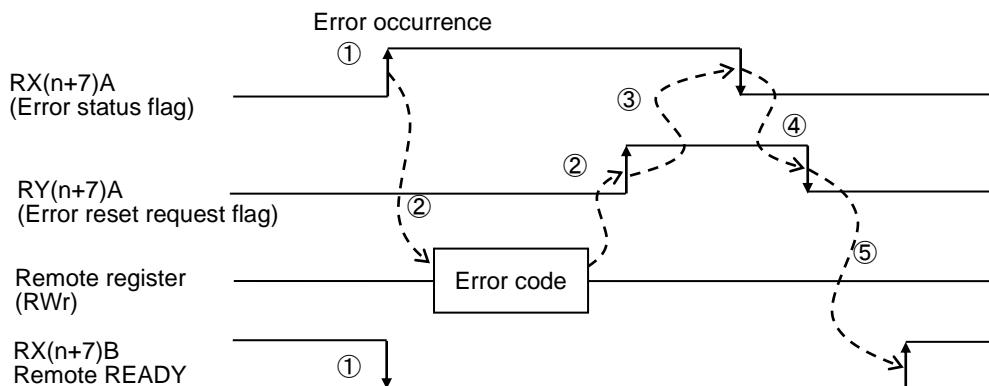

6.2 Initial Communication

Initial communication is performed at the beginning after the power supply is turned on or hardware is reset. Refer to section 7.1 about the remote input RX and the remote output RY.

- ① After the power supply is turned on, or hardware is reset, the initial data processing request flag is turned on by Measuring Unit.
- ② After the initial data processing request flag is turned on, turn on the initial data setting completion flag.
- ③ After the initial data setting completion flag is turned on, the initial data processing request flag is turned off and the remote READY is turned on.
- ④ After the initial data processing request flag is turned off, turned off the initial data setting completion flag.

6.3 Error Communication

- ① When an error occurs in Measuring Unit, error status flag is turned on and the remote READY is turned off.
- ② When the error status flag is turned on, read the error code from the remote register RWr. Eliminate the cause of the error while referring to the red error code. When resuming communication with Measuring Unit, turn on the error reset request flag.
- ③ After the error reset request flag is turned on, the error status flag is turned off.
- ④ After the error status flag is turned off, turn off the error reset request flag.
- ⑤ After the error reset request flag is turned off, the remote READY is turned on and normal communication is resumed.

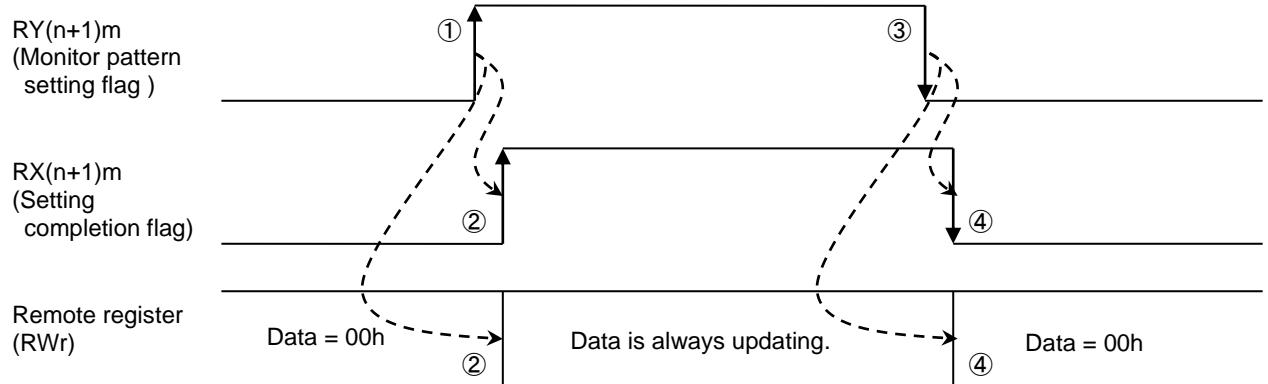

Note: Refer to "7.2.6 About error occurrence" for error code.

6.4 Normal Communication

After initial data processing is complete, allows the monitoring by pattern, monitoring by command (1H) and setting by command (2H).

6.4.1 Monitoring by Pattern

Up to 16 measuring values can be monitored by setting a bit of RY. Measuring values which can be monitored have been already grouping in Measuring Unit in advance. Therefore, select the necessary group in a bit of RY. (Refer to section 7.1.2)

(1) Start of monitor

- ①Turns on monitor pattern setting flag(RY(n+1)m) which will be monitored.
- ②Corresponding setting completion flag(RX(n+1)m) is turned on when the measuring values can be monitored at Measuring Unit. At this time, Measuring values are stored in remote registers (RW) each time the measuring data of Measuring Unit is updating.

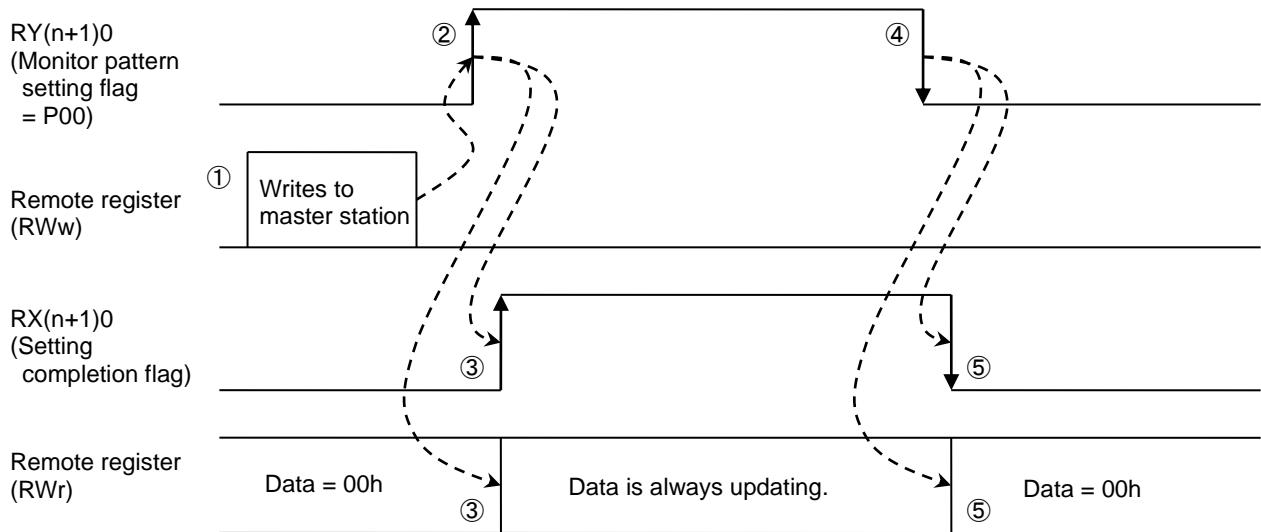

(2) End of monitor

- ③Turns off monitor pattern setting flag(RY(n+1)m).
- ④Corresponding setting completion flag(RX(n+1)m) is turned off and remote registers are 00h.

Note: When turns on multiple monitor pattern setting flag (RY (n+1)*), setting completion flag is not turned on. At this time, error status flag (RX (n+7)A) is turned on, and remote READY (RX (n+7)B) is turned off.

6.4.2 Monitoring by Command (1H)

Up to 8 measuring values can be monitored by setting the unique codes (called unit No., group No. and channel No.).

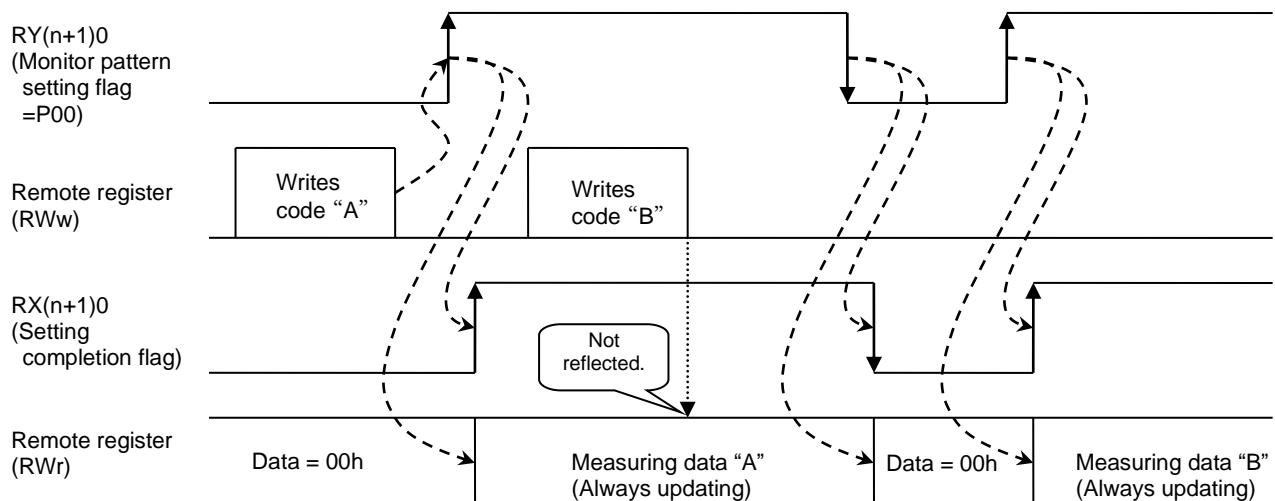

(1) Start of monitor

- ① Writes the Unit No., group No. and channel No. for measuring items to be monitored to remote registers(RWw).
- ② Turns on monitor pattern setting flag(RY(n+1)0).
- ③ When the measuring values can be monitored with Measuring Unit, corresponding setting completion flag(RX(n+1)0) is turned on. At this time, Measuring values are stored in remote registers (RWr) each time the measuring data of Measuring Unit is updating.

(2) End of monitor

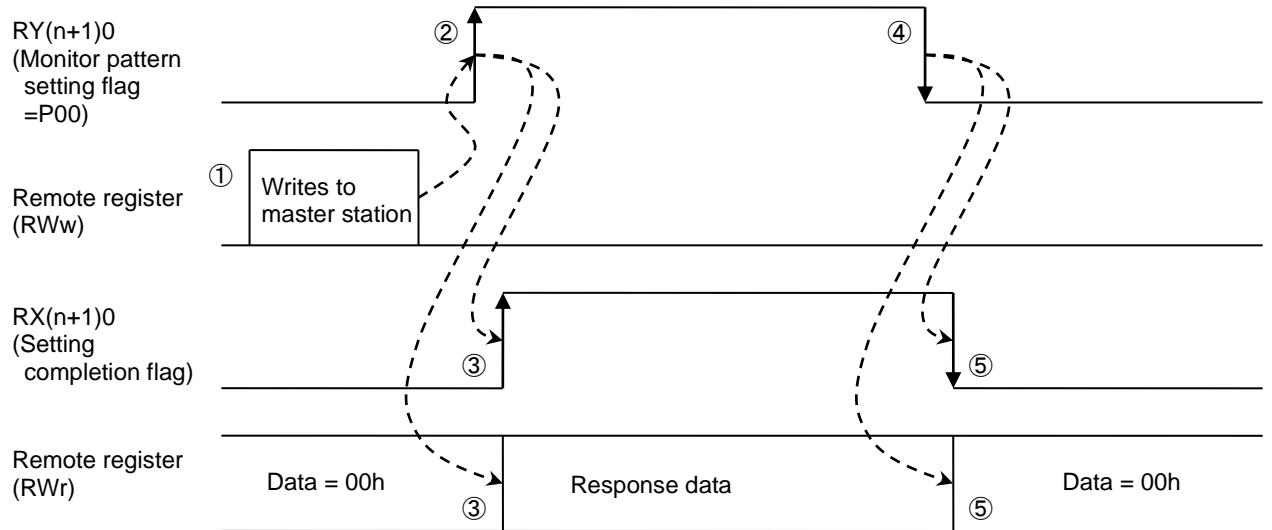

- ④ Turns off monitor pattern setting flag(RY(n+1)0).
- ⑤ Corresponding setting completion flag(RX(n+1)m) is turned off and remote registers are 00h.

Note: When monitor pattern setting flag (RY(n+1)0) remains on, measuring items in remote registers(RWr) is not reflected if remote registers (RWw) is changed. To change measuring items, turns on monitor pattern setting flag (RY (n+1)0) after changing remote registers (RWw).

6.4.3 Setting by Command (2H)

A setting item of Measuring Unit can be set by setting the unique codes (called unit No., group No. and channel No.) and setting data.

(1) Setting

- ① Writes the Unit No., group No, channel No. and setting data to remote registers(RWw).
- ② Turns on monitor pattern setting flag(RY(n+1)0).
- ③ After checking for data at Measuring Unit, corresponding setting completion flag(RX(n+1)0) is turned on. At this time, response data are stored in remote registers(RWr).

(2) End of setting

- ④ Turns off monitor pattern setting flag(RY(n+1)0).
- ⑤ Corresponding setting completion flag(RX(n+1)m) is turned off and remote registers are 00h.

Note: When monitor pattern setting flag (RY (n+1)0) remains on, setting data of Measuring Unit is not reflected if remote registers (RWw) is changed. To change setting data, turns on monitor pattern setting flag (RY (n+1)0) after writing remote registers (RWw).

7. Remote I/O and Remote Register

7.1 Remote Input RX, Remote Output RY

The remote input RX and remote output RY are used to communicate for bit data between the master station and Measuring Unit.

7.1.1 Remote input RX

The allocation of the remote input RX of Measuring Unit is shown in the table below.

| Device No. | Signal name | EMU4-BD1-MB | EMU4-HD1-MB | Description | | Note |
|----------------------|--------------------------------------|-------------|-------------|-----------------------------------------------------|---------------------------------------------|----------------|
| | | | | OFF(0) | ON(1) | |
| RXn0 | Alarm of Pulse | — | ○ | Non-Alarm state | Alarm state | Note2 Note3 |
| RXn1 | Reserved | — | — | — | — | |
| RXn2 | Alarm of Demand current | — | ○ | Non-Alarm state | Alarm state | Note 2 |
| RXn3 | Alarm of Demand Active power | — | ○ | Non-Alarm state | Alarm state | Note 2 |
| RXn4 | Contact input | — | ○ | OFF(OPEN) | ON(CLOSE) | Note 4 |
| RXn5 | Alarm (total) | — | ○ | Non-Alarm state | Alarm state | Note 2 |
| RXn6 | Reserved | — | — | — | — | |
| RXn7 | Reserved | — | — | — | — | |
| RXn8 | Alarm of Voltage | — | ○ | Non-Alarm state | Alarm state | Note 2 |
| RXn9 to RXnC | Reserved | — | — | — | — | |
| RXnD | Alarm of Power factor | — | ○ | Non-Alarm state | Alarm state | Note 2 |
| RXnE | Reserved | — | — | — | — | |
| RXnF | Reserved | — | — | — | — | |
| RX(n+1)0 | Setting completion flag P00 | ○ | ○ | Not receiving | Receiving | |
| RX(n+1)1 to RX(n+1)7 | Reserved | — | — | — | — | |
| RX(n+1)8 | Setting completion flag P08 | ○ | ○ | Not receiving | Receiving | |
| RX(n+1)9 | Setting completion flag P09 | ○ | ○ | Not receiving | Receiving | |
| RX(n+1)A | Setting completion flag P10 | — | ○ | Not receiving | Receiving | Note 5 |
| RX(n+1)B | Setting completion flag P11 | ○ | ○ | Not receiving | Receiving | |
| RX(n+1)C | Setting completion flag P12 | — | ○ | Not receiving | Receiving | Note 5 |
| RX(n+1)D to RX(n+7)7 | Reserved | — | — | — | — | |
| RX(n+7)8 | Initial data processing request flag | ○ | ○ | Power OFF, remote READY ON, or error status flag ON | Power supply is turned ON or hardware reset | Note 1 |
| RX(n+7)9 | Reserved | — | — | — | — | |
| RX(n+7)A | Error status flag | ○ | ○ | No error occurrence | Error occurrence | Note 1 |
| RX(n+7)B | Remote READY | ○ | ○ | Monitoring or setting are not possible | Normally communication status | Note 1 |
| RX(n+7)C to RX(n+7)F | Reserved | — | — | — | — | |

Note 1: For the details, refer to "6.Communication Between the Master Station and Measuring Unit".

Note 2: This is only output when alarm use in measuring unit.

Note 3: Alarm of Pulse count is available only when Setting of external input signal of EMU4-HD1-MB is setup Pulse input. .

Note 4: Contact Input is available only when Setting of external input signal of EMU4-HD1-MB is setup Contact input.

Note 5: This is only available when phase wire system is 3P4W in EMU4-HD1-MB.

The allocation of the remote input RX of Measuring Unit is shown in the table below.

| Device No. | Signal name | EMU4-BD1A-MB | EMU4-HD1A-MB | Description | | Note |
|----------------------|-----------------------------------------------|--------------|--------------|-----------------------------------------------------|---------------------------------------------|----------------|
| | | | | OFF(0) | ON(1) | |

| RX(n+7)9 | Reserved | — | — | — | — | — | |
| RX(n+7)A | Error status flag | ○ | ○ | ○ | No error occurrence | Error occurrence | Note 1 |
| RX(n+7)B | Remote READY | ○ | ○ | ○ | Monitoring or setting are not possible | Normally communication status | Note 1 |
| RX(n+7)C to RX(n+7)F | Reserved | — | — | — | — | — | |

Note 1: For the details, refer to “6.2 Initial communication t”, “6.3 Error communication”

Note 2: This is only output when alarm use in measuring unit.

Note 3: Alarm of Pulse count is available only when Setting of external input signal of EMU4-HM1-MB is setup Pulse input.

Note 4: Contact Input is available only when Setting of external input signal of EMU4-HM1-MB is setup Contact input.

Note 5: This is only available when phase wire system is 3P4W in EMU4-HM1-MB, EMU4-A2,EMU4-VA2.

Note 6: For the alarm state of extension model(EMU4-A2,EMU4-VA2,EMU4-AX4,EMU4-PX4),

monitor the alarm state with the Command of Date Monitor(1H).

The allocation of the remote input RX of Measuring Unit is shown in the table below.

| Device No. | Signal name | EMU4-CNT-MB | Description | | Note |

Note 1: For the details, refer to "6.2 Initial communication t", "6.3 Error communication"

Note 2: It indicates the contact output status of EMU4-CNT-MB with terminal ID=1.

Terminal ID is the ID assigned when the terminal setting is made with Control Unit Engineering Tool (Model:EMU4-KNET).

For details, refer to the User's Manual(Details) for EMU4-CNT-MB.

The allocation of the remote input RX of Measuring Unit is shown in the table below.

| Device No. | Signal name | EMU4-A2 EMU4-VA2 | EMU4-AX4 EMU4-PX4 | Description | | Note |

| RX(n+3)E | Reserved | — | — | — | — | |
| RX(n+3)F | Reserved | — | — | — | — | |

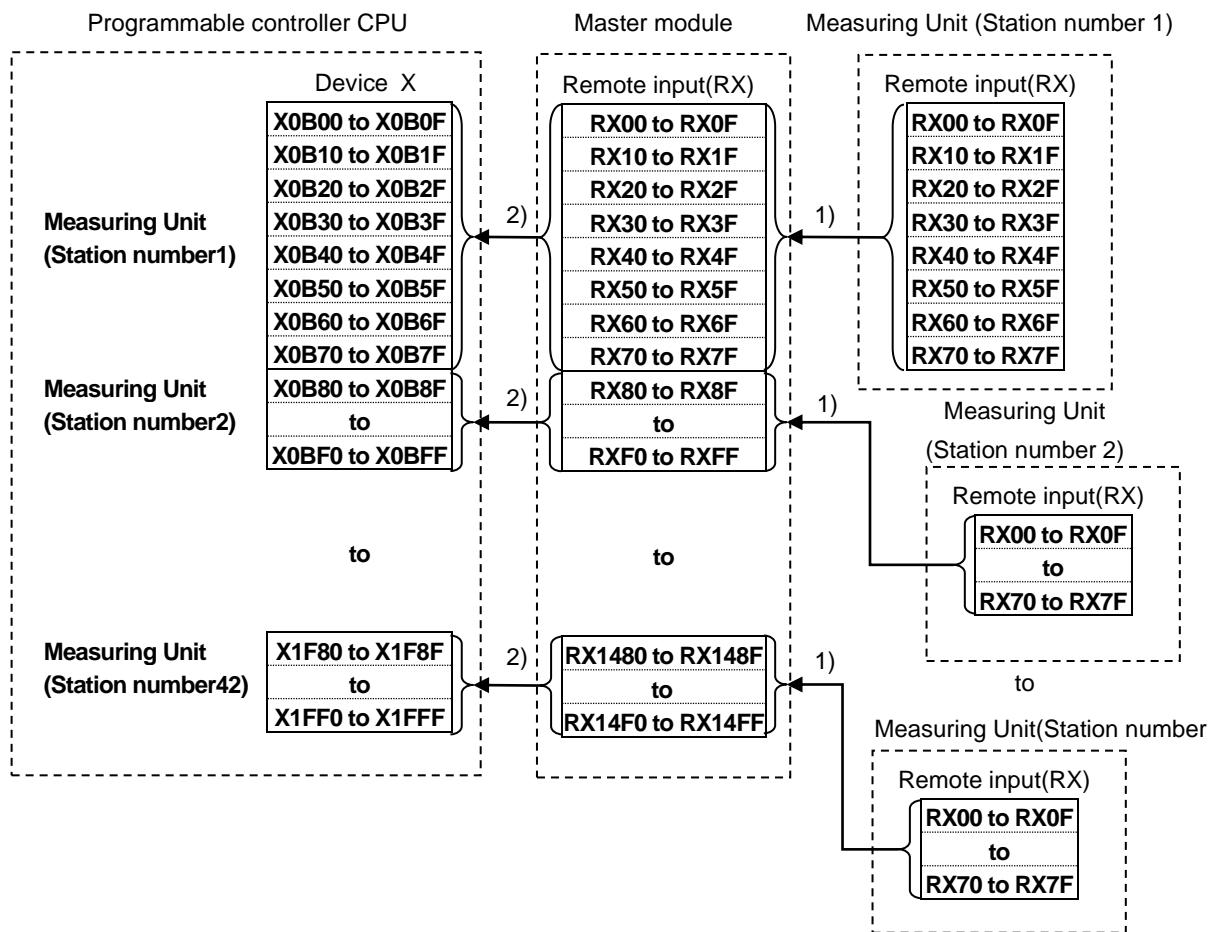

Note1: This is available only when wire phase system is 3P4W.

*: Lead RXn0 depends on station number of measuring unit and CC-Link system configuration.

Please refer to User's manual of CC-Link master station for more details.

(1) Relationships between programmable controller CPU, master module and Measuring Unit(RX)

- 1) The input status of Measuring Unit is stored automatically (for each link scan) in the master station's "remote input RX" buffer memory.
- 2) The input status stored in the "remote input RX" buffer memory is stored in the CPU device set with the automatic refresh parameters.

| Station number | Device No. | Station number | Device No. | Station number | Device No. |
|----------------|----------------|----------------|----------------|----------------|----------------|
| 1 | X0B00 to X0B7F | 15 | X1200 to X127F | 29 | X1900 to X197F |
| 2 | X0B80 to X0BFF | 16 | X1280 to X12FF | 30 | X1980 to X19FF |
| 3 | X0C00 to X0C7F | 17 | X1300 to X137F | 31 | X1A00 to X1A7F |
| 4 | X0C80 to X0CFF | 18 | X1380 to X13FF | 32 | X1A80 to X1AFF |
| 5 | X0D00 to X0D7F | 19 | X1400 to X147F | 33 | X1B00 to X1B7F |
| 6 | X0D80 to X0DFF | 20 | X1480 to X14FF | 34 | X1B80 to X1BFF |
| 7 | X0E00 to X0E7F | 21 | X1500 to X157F | 35 | X1C00 to X1C7F |
| 8 | X0E80 to X0EFF | 22 | X1580 to X15FF | 36 | X1C80 to X1CFF |
| 9 | X0F00 to X0F7F | 23 | X1600 to X167F | 37 | X1D00 to X1D7F |
| 10 | X0F80 to X0FFF | 24 | X1680 to X16FF | 38 | X1D80 to X1DFF |
| 11 | X1000 to X107F | 25 | X1700 to X177F | 39 | X1E00 to X1E7F |
| 12 | X1080 to X10FF | 26 | X1780 to X17FF | 40 | X1E80 to X1EFF |
| 13 | X1100 to X117F | 27 | X1800 to X187F | 41 | X1F00 to X1F7F |
| 14 | X1180 to X11FF | 28 | X1880 to X18FF | 42 | X1F80 to X1FFF |

Device No. is determined to "X0B00 to X1FFF" if refresh device of remote input (RX) is set to "X0B00".

7.1.2 Remote Output RY

The allocation of the remote output RY of Measuring Unit is shown in the table below.

| Device No. | Signal name | EMU4-BD1-MB | EMU4-HD1-MB | Description | | Note |
|----------------------|-----------------------------------|-------------|-------------|-----------------------------------------------------|---------------------------------------------|--------|
| | | | | ON(1)→OFF(0) | OFF(0)→ON(1) | |
| RYn0 to RYnF | Reserved | — | — | — | — | |
| RX(n+1)0 | Monitor pattern setting flag P00 | ○ | ○ | Not setting | Setting | |
| RY(n+1)1 to RY(n+1)7 | Reserved | — | — | — | — | |
| RY(n+1)8 | Monitor pattern setting flag P08 | ○ | ○ | Not setting | Setting | |
| RY(n+1)9 | Monitor pattern setting flag P09 | ○ | ○ | Not setting | Setting | |
| RY(n+1)A | Monitor pattern setting flag P10 | — | ○ | Not setting | Setting | Note 2 |

| RY(n+1)F to RY(n+7)7 | Reserved | — | — | — | — | |
| RY(n+7)8 | Initial data process completion flag | ○ | ○ | Initial data process completion flag is turned OFF | Initial data process completion | Note 1 |
| RY(n+7)9 | Reserved | — | — | — | — | |
| RY(n+7)A | Error reset status flag | ○ | ○ | Turn OFF error status flag | Error status reset request | Note 1 |
| RY(n+7)B to RY(n+7)F | Reserved | — | — | — | — | |

Note 1: For the details, refer to “6.2 Initial communication”, “6.3 Error communication”

Note 2: This is only available when phase wire system is 3P4W in EMU4-HD1A-MB.

*: Lead RYn0 depends on station number of measuring unit and CC-Link system configuration.

Please refer to User's manual of CC-Link master station for more details.

Point

Do not read or write to reserved remote registers. If reading or writing is performed, the functions of Measuring Unit are not guaranteed.

The allocation of the remote output RY of Measuring Unit is shown in the table below.

| Device No. | Signal name | EMU4-BM1-MB | EMU4-HM1-MB | EMU4-LG1-MB | EMU4-CNT-MB | Description | | Note |
|----------------------|--------------------------------------|-------------|-------------|-------------|-------------|----------------------------------------------------|---------------------------------|--------|
| | | | | | | ON (1) → OFF (0) | OFF (0) → ON (1) | |
| RYn0 to RYnF | Reserved | — | — | — | — | — | — | |
| RY(n+1)0 | Monitor pattern setting flag P00 | ○ | ○ | ○ | ○ | Not setting | Setting | |
| RY(n+1)1 to RY(n+1)7 | Reserved | — | — | — | — | — | — | |
| RY(n+1)8 | Monitor pattern setting flag P08 | ○ | ○ | — | — | Not setting | Setting | |
| RY(n+1)9 | Monitor pattern setting flag P09 | ○ | ○ | — | — | Not setting | Setting | |
| RY(n+1)A | Monitor pattern setting flag P10 | — | ○ | — | — | Not setting | Setting | Note 2 |
| RY(n+1)B | Monitor pattern setting flag P11 | ○ | ○ | — | — | Not setting | Setting | |
| RY(n+1)C | Monitor pattern setting flag P12 | — | ○ | — | — | Not setting | Setting | Note 2 |
| RY(n+1)D | Monitor pattern setting flag P13 | — | — | ○ | — | Not setting | Setting | |
| RY(n+1)E | Monitor pattern setting flag P14 | — | — | — | ○ | Not setting | Setting | |
| RY(n+1)F to RY(n+7)7 | Reserved | — | — | — | — | — | — | |
| RY(n+7)8 | Initial data process completion flag | ○ | ○ | ○ | ○ | Initial data process completion flag is turned OFF | Initial data process completion | Note 1 |
| RY(n+7)9 | Reserved | — | — | — | — | — | — | |
| RY(n+7)A | Error reset status flag | ○ | ○ | ○ | ○ | Turn OFF error status flag | Error status reset request | Note 1 |
| RY(n+7)B to RY(n+7)F | Reserved | — | — | — | — | — | — | |

Note 1: For the details, refer to “6.2 Initial communication t”, “6.3 Error communication”

Note 2: This is only available when phase wire system is 3P4W.

*: Lead RYn0 depends on station number of measuring unit and CC-Link system configuration.

Please refer to User's manual of CC-Link master station for more details.

For circuit6

For circuit7

Note 1: This is only available when phase wire system is 3P4W.

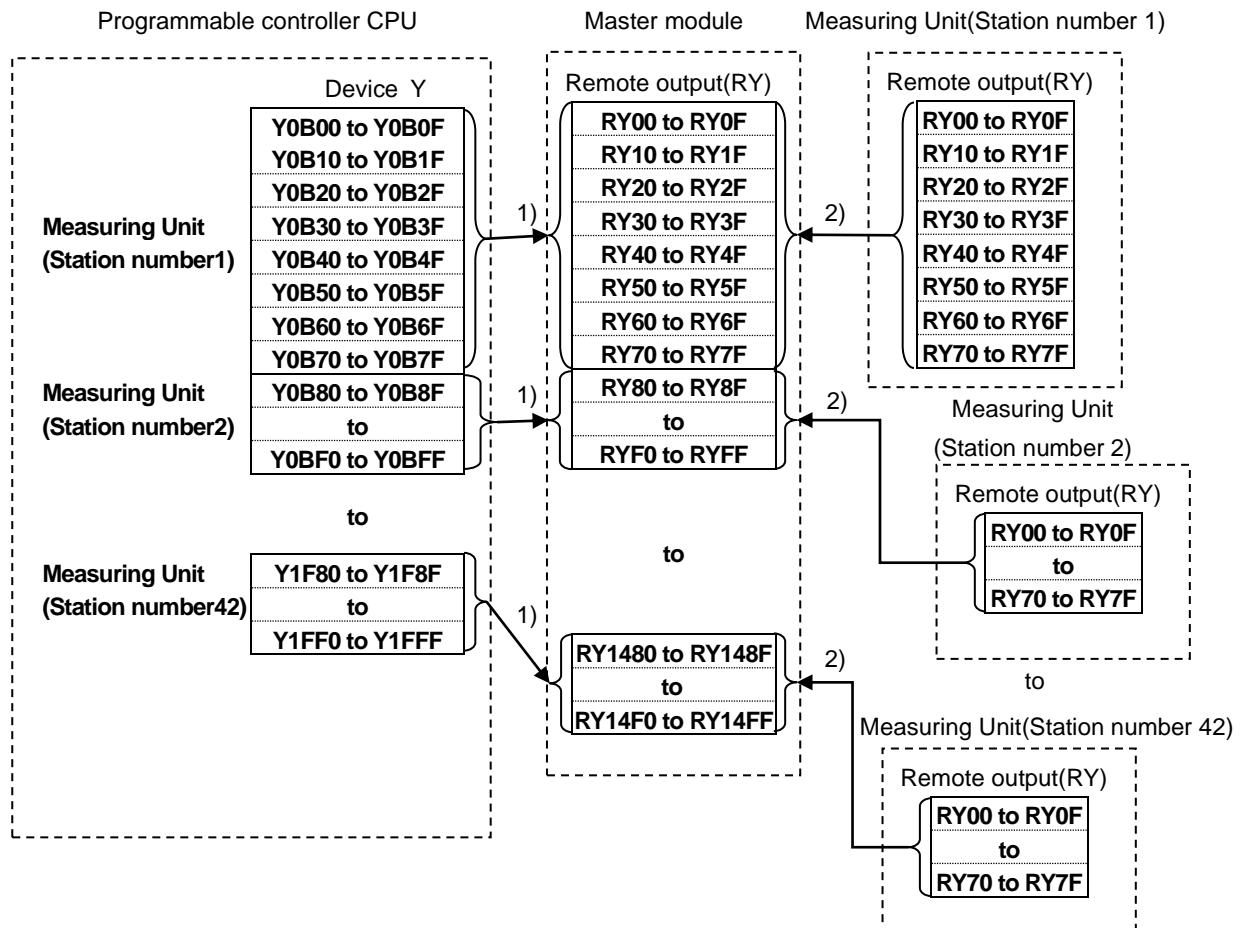

*: Lead RYn0 depends on station number of measuring unit and CC-Link system configuration.

Please refer to User's manual of CC-Link master station for more details.

| Point |
|--------------------------------------------------------------------------------------------------------------------------------------------|
| Do not read or write to reserved remote registers. If reading or writing is performed, the functions of Measuring Unit are not guaranteed. |

Relationships between programmable controller CPU, master module and Measuring Unit (RY)

- 1) The on/off data of the CPU device set with the automatic refresh parameters is stored in the "remote output RY" buffer memory.
- 2) Remote output RY is automatically set to on/off (for each link scan) according to the output status stored in the "remote output RY" buffer memory.

| Station number | Device No. | Station number | Device No. | Station number | Device No. |
|----------------|----------------|----------------|----------------|----------------|----------------|
| 1 | Y0B00 to Y0B7F | 15 | Y1200 to Y127F | 29 | Y1900 to Y197F |
| 2 | Y0B80 to Y0BFF | 16 | Y1280 to Y12FF | 30 | Y1980 to Y19FF |
| 3 | Y0C00 to Y0C7F | 17 | Y1300 to Y137F | 31 | Y1A00 to Y1A7F |
| 4 | Y0C80 to Y0CFF | 18 | Y1380 to Y13FF | 32 | Y1A80 to Y1AFF |
| 5 | Y0D00 to Y0D7F | 19 | Y1400 to Y147F | 33 | Y1B00 to Y1B7F |
| 6 | Y0D80 to Y0DFE | 20 | Y1480 to Y14FF | 34 | Y1B80 to Y1BFF |
| 7 | Y0E00 to Y0E7F | 21 | Y1500 to Y157F | 35 | Y1C00 to Y1C7F |
| 8 | Y0E80 to Y0EFF | 22 | Y1580 to Y15FF | 36 | Y1C80 to Y1CFF |
| 9 | Y0F00 to Y0F7F | 23 | Y1600 to Y167F | 37 | Y1D00 to Y1D7F |
| 10 | Y0F80 to Y0FFF | 24 | Y1680 to Y16FF | 38 | Y1D80 to Y1DFE |
| 11 | Y1000 to Y107F | 25 | Y1700 to Y177F | 39 | Y1E00 to Y1E7F |
| 12 | Y1080 to Y10FF | 26 | Y1780 to Y17FF | 40 | Y1E80 to Y1EFF |
| 13 | Y1100 to Y117F | 27 | Y1800 to Y187F | 41 | Y1F00 to Y1F7F |
| 14 | Y1180 to Y11FF | 28 | Y1880 to Y18FF | 42 | Y1F80 to Y1FFF |

Device No. is determined to "Y0B00 to Y1FFF" if refresh device of remote output (RY) is set to "Y0B00".

7.2 Remote Register (RWr, RWw)

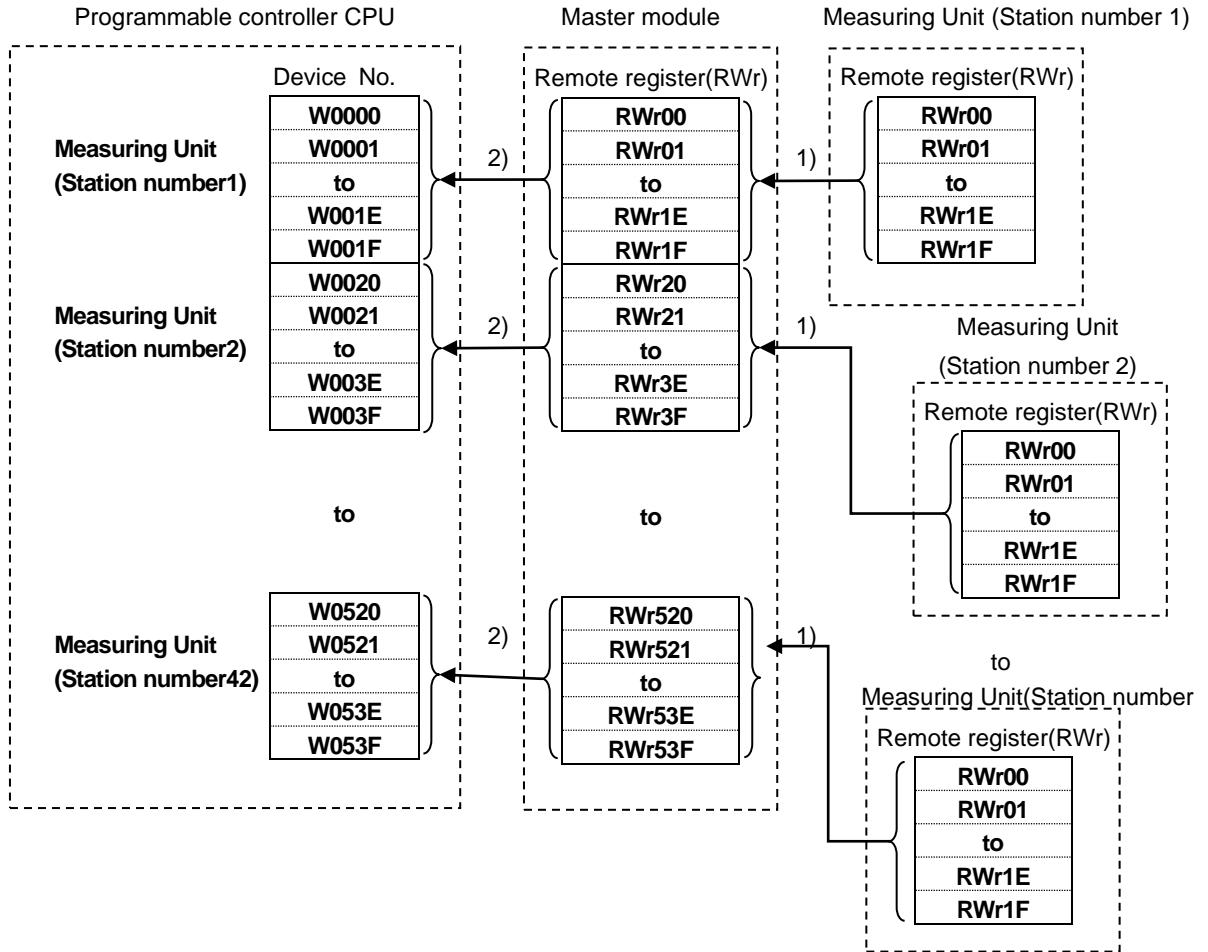

The remote registers RWr and RWw are used to communicate word data between the master station and Measuring Unit. Because it occupies 1 station (Expanded cyclic setting: octuplet), the remote registers RWr and RWw each have 32 words in length.

For monitoring by pattern, it is not necessary to use remote registers (RWw). Selected measuring values which are set a bit of RY are stored in remote registers (RWr).

For monitoring by command (1H) and setting by command (2H), it is necessary to use remote registers (RWw). Measuring Unit has unique codes (called unit No., group No. and channel No.) for each measurement items and setting items. It becomes possible to monitor each measurement values or set each parameter by writing into the remote registers (RWw) of the master station command and the related data allocated to the item you want to monitor or set.

Relationships between programmable controller CPU, master module and Measuring Unit(RWr)

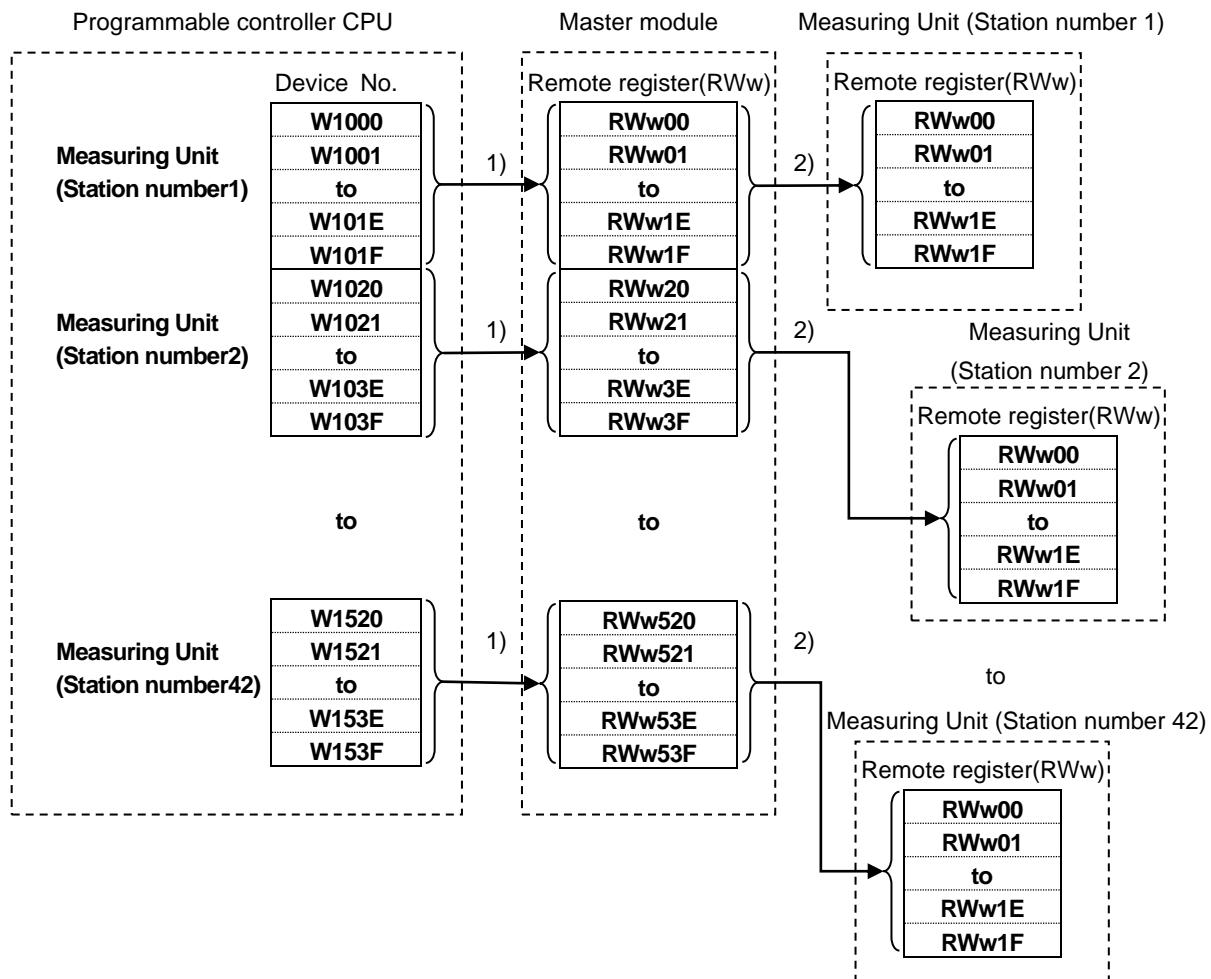

- 1) The remote registers RWr data of a remote device station is automatically stored in the "remote registers RWr" buffer memory of the master station.
- 2) The remote registers RWr data of Measuring Unit stored in the "remote registers RWr" buffer memory is stored in the CPU device set with the automatic refresh parameters.

| Station number | Device No. | Station number | Device No. | Station number | Device No. |
|----------------|----------------|----------------|----------------|----------------|----------------|
| 1 | W0000 to W001F | 15 | W01C0 to W01DF | 29 | W0380 to W039F |
| 2 | W0020 to W003F | 16 | W01E0 to W01FF | 30 | W03A0 to W03BF |
| 3 | W0040 to W005F | 17 | W0200 to W021F | 31 | W03C0 to W03DF |
| 4 | W0060 to W007F | 18 | W0220 to W023F | 32 | W03E0 to W03FF |
| 5 | W0080 to W009F | 19 | W0240 to W025F | 33 | W0400 to W041F |
| 6 | W00A0 to W00BF | 20 | W0260 to W027F | 34 | W0420 to W043F |
| 7 | W00C0 to W00DF | 21 | W0280 to W029F | 35 | W0440 to W045F |
| 8 | W00E0 to W00FF | 22 | W02A0 to W02BF | 36 | W0460 to W047F |
| 9 | W0100 to W011F | 23 | W02C0 to W02DF | 37 | W0480 to W049F |
| 10 | W0120 to W013F | 24 | W02E0 to W02FF | 38 | W04A0 to W04BF |
| 11 | W0140 to W015F | 25 | W0300 to W031F | 39 | W04C0 to W04DF |
| 12 | W0160 to W017F | 26 | W0320 to W033F | 40 | W04E0 to W04FF |
| 13 | W0180 to W019F | 27 | W0340 to W035F | 41 | W0500 to W051F |
| 14 | W01A0 to W01BF | 28 | W0360 to W037F | 42 | W0520 to W053F |

Device No. is determined to "W0000 to W053F" if refresh device of remote registers (RWr) is set to "W0".

- (1) Relationships between programmable controller CPU, master module and Measuring Unit(RWw)
- 1) The transmission data of the CPU device set with the automatic refresh parameters is stored in the "remote registers RWw" buffer memory.
 - 2) The data stored in the "remote registers RWw" buffer memory is automatically sent to the remote registers RWw of each remote device station.

| Station number | Device No. | Station number | Device No. | Station number | Device No. |
|----------------|----------------|----------------|----------------|----------------|----------------|
| 1 | W1000 to W101F | 15 | W11C0 to W11DF | 29 | W1380 to W139F |
| 2 | W1020 to W103F | 16 | W11E0 to W11FF | 30 | W13A0 to W13BF |
| 3 | W1040 to W105F | 17 | W1200 to W121F | 31 | W13C0 to W13DF |
| 4 | W1060 to W107F | 18 | W1220 to W123F | 32 | W13E0 to W13FF |
| 5 | W1080 to W109F | 19 | W1240 to W125F | 33 | W1400 to W141F |
| 6 | W10A0 to W10BF | 20 | W1260 to W127F | 34 | W1420 to W143F |
| 7 | W10C0 to W10DF | 21 | W1280 to W129F | 35 | W1440 to W145F |
| 8 | W10E0 to W10FF | 22 | W12A0 to W12BF | 36 | W1460 to W147F |
| 9 | W1100 to W111F | 23 | W12C0 to W12DF | 37 | W1480 to W149F |
| 10 | W1120 to W113F | 24 | W12E0 to W12FF | 38 | W14A0 to W14BF |
| 11 | W1140 to W115F | 25 | W1300 to W131F | 39 | W14C0 to W14DF |
| 12 | W1160 to W117F | 26 | W1320 to W133F | 40 | W14E0 to W14FF |
| 13 | W1180 to W119F | 27 | W1340 to W135F | 41 | W1500 to W151F |
| 14 | W11A0 to W11BF | 28 | W1360 to W137F | 42 | W1520 to W153F |

Device No. is determined to "W1000 to W153F" if refresh device of remote registers (RWw) is set to "W1000".

7.2.1 Monitor Pattern

The following table shows correspondence between RY and grouped measuring items.

Table 7.1 Correspondence between RY and grouped measuring items.

(Model: EMU4-BD1-MB,EMU4-HD1-MB,EMU4-BD1A-MB,EMU4-HD1A-MB,EMU4-BM1-MB,EMU4-HM1-MB)

| Group format | | |

(1) Group format ①

For group format ①, Up to 8 measuring items can be monitored per a group. 4 words are used per measuring item.

(2) Group format ②

For group format ②, Up to 16 measuring items can be monitored per a group. 2 words are used per measuring item. However, it is necessary to be multiplied by using Table 7. because there is no multiplicand data .

| Group format ② | | | | |

<Numerical value>

Numerical value: 32-bit integer with a sign
-2147483648~2147483647
(8000000H~7FFFFFFFH)

Format of numerical value is same to group format ①.
This format is not containing multiplicand data. Therefore, Confirm the multiplicand fixed according to phase wire system, primary voltage and primary current by Refer to 7.2.5 Effective Range and Multiplicand, and multiply it using sequence program.

■Example: Phase 1 current

When setting of primary current is 200A, multiplicand is $\times 10^{-1}$ according to section Table 7..

| Data(Numerical value) | Actual value |
|-----------------------------|--------------------------------|
| 000000FFH \Rightarrow 255 | $255 \times 10^{-1} = 25.5[A]$ |

■Example: Active power

When settings are follows, multiplicand is $\times 100$ according to section Table 7..

- Phase wire system: 3P3W
- Primary voltage: 6600V
- Primary current: 1200A

| Data(Numerical value) | Actual value |
|-------------------------------|-----------------------------------|
| 0000FFFFH \Rightarrow 65535 | $65535 \times 100 = 6553500[kWh]$ |

7.2.2 When Monitoring by Command(1H)

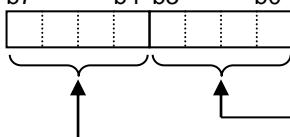

Up to 8 measuring values can be monitored by setting the unit No., group No. and channel No. to remote registers (RWw). Monitor pattern setting flag (RX (n+1)0) is used to send the command. (For details, refer to section 6.4.2)

The command can be sent only when the remote READY (RX (n+7)B) is ON.

| Remote register RWw (Programmable controller→Measuring Unit) | | | | Remote register RWr (Measuring Unit→Programmable controller) | | | |
|-----------------------------------------------------------------|-----|-----------|----------|-----------------------------------------------------------------|-------|--------------|--------------|
| | b15 | b8 | b7 b0 | | b15 | b8 | b7 b0 |
| RWw00 | | Group No. | Unit No. | 1H | RWr00 | Channel No. | Group No. |
| RWw01 | 00H | | 00H | | RWr01 | Index number | (Error code) |
| RWw02 | 00H | | 00H | | RWr02 | Low data | |
| RWw03 | 00H | | 00H | | RWr03 | High data | |
| RWw04 | | Group No. | Unit No. | 1H | RWr04 | Channel No. | Group No. |
| RWw05 | 00H | | 00H | | RWr05 | Index number | (Error code) |
| RWw06 | 00H | | 00H | | RWr06 | Low data | |
| RWw07 | 00H | | 00H | | RWr07 | High data | |
| to | | to | | | to | to | |
| RWw1C | | Group No. | Unit No. | 1H | RWr1C | Channel No. | Group No. |
| RWw1D | 00H | | 00H | | RWr1D | Index number | (Error code) |
| RWw1E | 00H | | 00H | | RWr1E | Low data | |
| RWw1F | 00H | | 00H | | RWr1F | High data | |

* At normal communication, Error code is 00h.
About the other error code, refer to Table 7..

* It is described as 8 bits data by combining the unit No. (high 4 bits) and the command (low 4 bits)

Command: Data range is 0H to 7H

Unit No.: Data range is 0H to 7H

Unit No. is 1H when use EMU4-BD1-MB, EMU4-HD1-MB, EMU4-BD1A-MB, EMU4-HD1A-MB, EMU4-BM1-MB, EMU4-HM1-MB, EMU4-LG1-MB.

Input circuit No.(ch No.) is Unit No. when use EMU4-A2, EMU4-VA2, EMU4-AX4, EMU4-PX4.

For example, When the unit No. is 0H and the command is 1H, it becomes "01H".

- Measuring Unit can monitor the value of measurement items which are not displayed.
- The measurement items are assigned Unit No., Group No. and Channel No. (Refer to Table 7.2)
- Store the unused space to 00H when monitoring items are fewer than 8.
- The details of data format are shown in the “Data Format ①” to “Data Format ⑦”
- The monitoring items are changed with the setting of phase wire system.(Refer to Table 7.2)
- When combined command(2H), an error occurs.
- In case of monitoring the present value and its maximum continuously according to the renewal data timing of Measuring Unit, the maximum may be smaller than the present value.

| A0 | 35 | | | Alarm state monitoring(3 side) | — | Alarm | | O | — | — | O — — — | |

Note

*1: For 3P3W_2CT, harmonic current (2-phase) is not supported.

*2: The unit differs depending on the setting value (electric energy conversion value unit, electric energy conversion value unit (3 side), pulse conversion value unit, operating time unit, operating time unit (3 side)).
For detail, refer to "7.2.3 When Setting by Command (2H)".

*3: Accumulated alarm time measures the time during which the upper/lower limit alarm is occurring.

Integration is performed every measurement cycle (250 ms), and 1 count indicates 250 ms.

Inst.: Instantaneous value. RMS.: Root-Mean-Square value.

*1: Electric energy converted, Electric energy converted(3side), Pulse conversion have different units according to each setup value.

*2: When the basic unit is EMU4-CNT-MB, the measurement value of the extension unit (EMU4-A2,EMU4-VA2) is updated every 1 minute. So the measurement value 1 minute before may be returned.

Please refer to Table 7.3 Group Channel List for Data Set Command (2H) for more details.

*1: Unit is different by the setting of pulse conversion unit.

*2: When the basic unit is EMU4-CNT-MB, the measurement value of the extension unit (EMU4-A2,EMU4-VA2) is updated every 1 minute. So the measurement value 1 minute before may be returned.

*1: It indicates the contact output status of EMU4-CNT-MB with terminal ID=1.

Terminal ID is the ID assigned when the terminal setting is made with Control Unit Engineering Tool (Model:EMU4-KNET).

Check the terminal list on the setting screen of EMU4-KNET and specify the Group(H)/Channel(H) of the terminal which you want to acquire data.

*2: Only EMU4-CNT-MB with terminal ID=1 can be monitored.

*3: The Commands are not accepted while the setting of EMU4-CNT-MB is being changed with Control Unit Engineering Tool (Model:EMU4-KNET).

7.2.3 When Setting by Command (2H)

Settings of Measuring Unit can be set by communication.

Monitor pattern setting flag (RX (n+1)0) is used to send the command. (For details, refer to section 6.4.2)

The command can be sent only when the remote READY (RX (n+7)B) is ON.

| 2H | Data Set | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| <small>* At normal communication, Error code is 00h. About the other error code, refer to Table 7..</small> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

- A setting item of Measuring Unit can be set by storing Group No., Channel No. and setting data to remote register(RWw).
- About Group No. and Channel No., refer to Table 7.
- The details of data format are shown in the “Data Format ①” to “Data Format ⑦”.

*1: After writing the set-up value, about 0.5 seconds (max 2 seconds) is needed to restart the measurement based on new set-up value.

*2: If the basic unit is EMU4-CNT-MB and the control operation state is RUN, the set-up value of extension unit cannot be changed.Change the set-up value after changing the control operation state to stop.

Table 7.3 Group Channel List for Data Set Command (2H) (1/12)

| Hex | | Content name | EMU4-BD1-MB EMU4-HD1-MB | | Data format |
|-------|---------|------------------------------|-------------------------------------------------------------|----------------|-------------|
| Group | Channel | | Range | Setting unit | |
| E0 | 11 | Primary current | 5.0A to 6000.0A | (Note1) | ④ |
| E0 | 12 | Primary voltage (L-L) | 1V to 6600V | (Note2) | ④ |
| E0 | 1B | Primary voltage (L-N) | 1V to 6600V (EMU4-HD1-MB 3P4W only) | (Note3) | ④ |
| E0 | 1C | Secondary voltage (L-L/L-N) | 1V to 220V | 1V | ④ |
| E0 | 13 | Phase Wire system | 1: 1P2W 2: 1P3W 3: 3P3W 4: 3P4W (EMU4-HD1-MB only) | — | ⑤ |
| 02 | E0 | Time constant for DA | 0 to 1800s | (Note4) | ⑤ |
| 08 | E0 | Time constant for DW | 0 to 1800s | (Note4) | ⑤ |
| E0 | 92 | 5A input switch | 0: Direct sensor 2: 5A sensor | — | ⑤ |
| 80 | 01 | Active energy (import) | 0 to 999999xMultiplicand (Note5) | 1xMultiplicand | ② |
| 80 | 63 | Active energy (export) | 0 to 999999xMultiplicand (Note5) | 1xMultiplicand | ② |
| 81 | 01 | Reactive energy (import lag) | 0 to 999999xMultiplicand (Note5) | 1xMultiplicand | ② |
| A1 | 3A | 16bit set register | Refer to 7.2.4 | — | ⑦ |

Note 1: Effective value of 5A input switch setup is follows.

| | |
|-------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary current when setup value is 5A input switch is 0:Direct Sensor. | 50A,100A,250A,400A,600A |
| Primary current when setup value is 5A input switch is 2: 5A Sensor. | From the most significant digit to 3 digits can be freely setting in the range from 5.0A to 6000.0A. Digits of 4 or more are rounded down to 3 digits. (When less than 10A, to 2 digits.) |

Note 2: Effective value of primary voltage (L-L) is follows.

3P3W or 1P2W

From the most significant digit to 3 digits can be freely setting in the range from 1V to 6600V.

(When less than from 1V to 99V, to 2 digits.)

When setup 110V or 220V, Setup is Direct setup(Not use VT) in EMU4-BD1-MB.

When setup 110V, 220V or 440V, Setup is Direct setup(Not use VT) in EMU4-HD1-MB.

1P3W

110V is valid only.

3P4W

From the most significant digit to 3 digits can be freely setting in the range from 1V to 6600V.

(When less than 1V-99V, to 2 digits.)

| Set value | Direct voltage | Set value | Direct voltage |
|-----------|----------------|-----------|----------------|
| 110V | 63.5/110V | 400V | 230/400V |
| 173V | 100/173V | 415V | 240/415V |
| 182V | 105/182V | 420V | 242/420V |
| 190V | 110/190V | 430V | 250/430V |
| 199V | 115/199V | 440V | 254/440V |
| 208V | 120/208V | 460V | 265/460V |
| 220V | 127/220V | 480V | 277/480V |
| 380V | 220/380V | | |

*From the most significant digit to 3 figures can be freely set up in the range.

Note 3: Setup of phase voltage is only available in 3P4W.

From the most significant digit to 3 digits can be freely setting in the range from 1V to 6600V.

(When less than from 1V to 99V, to 2 digits.)

Setup is Direct setup (Not use VT) when setup in below value.

| Set value | Direct voltage |
|-----------|----------------|
| 63.5V | 63.5/110V |
| 100V | 100/173V |
| 105V | 105/182V |
| 110V | 110/190V |
| 115V | 115/199V |
| 120V | 120/208V |
| 127V | 127/220V |
| 220V | 220/380V |
| 230V | 230/400V |
| 240V | 240/415V |
| 242V | 242/420V |
| 250V | 250/430V |
| 254V | 254/440V |
| 265V | 265/460V |
| 277V | 277/480V |

Note 4: The set value is the second unit value. (For example of 2 minutes, set as 120 seconds.) About setting range,
please refer to each user's manuals.

Note 5: Multiplying factor differs according to settings of phase wiring, primary voltage and primary current. For details, refer to 7.2.4.

Table 7.3 Group Channel List for Data Set Command (2H) (2/12)

| Hex | | Content name | EMU4-BD1A-MB, EMU4-HD1A-MB | | Data format |
|----------|------------|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-------------|

| 81 | 01 | Reactive energy(incoming lag) | 0 to 999999 × Multiplicand(Note4) | 1 × Multiplicand | ② |
| A1 | 3A | 16bit set register | Refer to "7.2.4 Data Format⑦" | — | ⑦ |

Note 1 : Effective value of 5 A/ Direct setup is follows.

| | |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary current when sensor type is (0: Direct sensor) | 50 A, 100 A, 250 A, 400 A, 600 A |
| Primary current when sensor type is (2:5A sensor) | From the most significant digit to 3 digits can be freely setting in the range from 5.0 A to 30000.0 A. Digits of 4 or more are rounded down to 3 digits. (When less than 100 A, to 2 digits.) |

Note 2 : Effective value of primary voltage(L-L) is follows.

1P2W or 3P3W

From the most significant digit to 3 digits can be freely setting in the range from 1 V to 110000 V.

(When less than from 1 V to 99 V, to 2 digits.) The upper 3 digits and beyond are truncated.

When setup 110 V or 220 V, setup is use VT in EMU4-BD1A-MB.

When setup 110 V, 220 V or 440 V, setup is use VT in EMU4-HD1A-MB.

1P3W

110 V is valid when use EMU4-BD1A-MB. Use or non-use of VT cannot be set. "Fixed without VT".

110 V and 220 V is valid when use EMU4-HD1A-MB. Use or non-use of VT cannot be set. "Fixed without VT".

Note 3 : Phase voltage 3P4W is only setup.

If the setting use or non-use of VT is "Non-use VT", it becomes a direct setting and the following settings are possible.

| Set value | Direct voltage |
|-----------|----------------|
| 63.5 V | 63.5 V/ 110 V |
| 100 V | 100 V/ 173 V |
| 105 V | 105 V/ 182 V |
| 110 V | 110 V/ 190 V |
| 115 V | 115 V/ 199 V |
| 120 V | 120 V/ 208 V |
| 127 V | 127 V/ 220 V |
| 200 V | 200 V/ 346 V |
| 220 V | 220 V/ 380 V |
| 230 V | 230 V/ 400 V |
| 240 V | 240 V/ 415 V |
| 242 V | 242 V/ 420 V |
| 250 V | 250 V/ 430 V |
| 254 V | 254 V/ 440 V |
| 265 V | 265 V/ 460 V |
| 277 V | 277 V/ 480 V |

If the setting use or non-use of VT is "Non-use VT" and other than 63.5 V, 100 V, 105 V, 110 V, 115 V, 120 V, 127 V, 200 V, 220 V, 230 V, 240 V, 242 V, 250 V, 254 V, 265 V and 277 V, the setting use or non-use of VT become "with VT".

* However, when the setting use or non-use of VT is "with VT", it remains "with VT" regardless of the primary voltage.

From the most significant digit to 3 digits can be freely setting in the range from 1 V to 63500 V.

(When less than from 1 V to 99 V, to 2 digits.)

Note 4 : The set value is the second unit value. (For example of 2 minutes, set as 120 seconds.)

About setting range

0sec, 10sec, 20sec, 30sec, 40sec, 50sec, 1min, 2min, 3min, 4min, 5min, 6min, 7min, 8min, 9min, 10min, 11min, 12min, 13min, 14min, 15min, 20min, 25min, 30min

Note 5 : Setting range is changed by the value of Full load power.

| Full load power(kW) | Setting range | | | |
|---------------------|------------------|--------|-------|------|
| | Less than 12 | 1 | 0.1 | 0.01 |
| 12 or more | Less than 120 | 10 | 1 | 0.1 |
| 120 or more | Less than 1200 | 100 | 10 | 1 |
| 1200 or more | Less than 12000 | 1000 | 100 | 10 |
| 12000 or more | Less than 120000 | 10000 | 1000 | 100 |
| 120000 or more | | 100000 | 10000 | 1000 |

Full load power is calculated in below.

$$\text{Full load power} = \alpha \times (\text{Primary voltage}) \times (\text{Primary current}) / 1000$$

- α : 1 1P2W
- : 2 1P3W(Primary voltage is 110 V or 220 V)
- : $\sqrt{3}$ 3P3W
- : 3 3P4W(Primary voltage is phase voltage)

Note 6 : From the most significant digit to 4 digits can be freely setting in the range from 0.001 to 10000.

Note 7 : Setup for upper / lower limit alarm value

The setting range varies depending on the monitoring target.

For the upper and lower limit alarm values, directly specify the upper and lower limit values within the setting range below.

| Target of alarm | Setting range |
|------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| Current demand upper limit alarm Phase N current demand upper limit alarm | 0 to 100% of primary current |
| Current demand lower limit alarm | |
| Line voltage upper limit alarm Phase voltage upper limit alarm | 15/ 11 × 0 to 100% of primary voltage *The range is rounded off to the nearest whole number. |
| Line voltage lower limit alarm Phase voltage lower limit alarm | |
| Electric power demand upper limit alarm | -100 to 100% of Full load power |
| Electric power demand lower limit alarm | |
| Power factor upper limit alarm | -5 to -99.9%, 100 to 5% |
| Power factor lower limit alarm | |
| Pulse conversion value upper limit alarm | 1 to 999999 |
| Current unbalance rate upper limit alarm | 0.01 to 999.99 |
| Voltage unbalance rate upper limit alarm | |

Note 8 : Multiplicand fixed for each items according to phase wire system, primary voltage and primary current.

(For details, refer to "7.2.5 Effective Range and Multiplicand".)

Table 7.3 Group Channel List for Data Set Command (2H) (4/12)

| Hex | | Content name | EMU4-BM1-MB, EMU4-HM1-MB EMU4-A2, EMU4-VA2 | | Data format |

Note 1: Effective value of 5A/Direct setup is follows.

| | |
|-------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary current when setup value is 5A input switch is 0:Direct Sensor. | 50A,100A,250A,400A,600A |
| Primary current when setup value is 5A input switch is 2:5A Sensor. | From the most significant digit to 3 digits can be freely setting in the range from 5.0A to 6000.0A. Digits of 4 or more are rounded down to 3 digits. (When less than 10A, to 2 digits.) |

Note 2 : Effective value of primary voltage (L-L) is follows.

3P3W or 1P2W

From the most significant digit to 3 digits can be freely setting in the range from 1V to 110000V.

(When less than from 1V to 99V, to 2 digits.)

When setup 110V or 220V, setup is use VT in EMU4-BM1-MB.

When setup 110V, 220V or 440V, setup is use VT in EMU4-HM1-MB, EMU4-A2, EMU4-VA2.

1P3W

110V is valid when use EMU4-BM1-MB.

110V and 220V is valid when use EMU4-HM1-MB, EMU4-A2, EMU4-VA2.

3P4W

From the most significant digit to 3 digits can be freely setting in the range from 1V to 110000V.

(When less than 1V-99V, to 2 digits.)

Digits of 4 or more are rounded down to 3 digits.

Note 3: From the most significant digit to 3 digits can be freely setting in the range from 1V to 63500V.

Digits of 4 or more are rounded down to 3 digits.

Note 4 : The set value is the second unit value. (For example of 2 minutes, set as 120 seconds.) About setting range, please refer to each user's manuals.

Note 5: Setting range is changed by the value of Full load power.

| Full load power(kW) | Setting range | | | |
|---------------------|---------------|-------|------|-------|
| Less than 12 | 1 | 0.1 | 0.01 | 0.001 |
| 12 or more | 10 | 1 | 0.1 | 0.01 |
| 120 or more | 100 | 10 | 1 | 0.1 |
| 1200 or more | 1000 | 100 | 10 | 1 |
| 12000 or more | 10000 | 1000 | 100 | 10 |
| 120000 or more | 100000 | 10000 | 1000 | 100 |

Full load power is calculated in below.

$$\text{Full load power [kW]} = \alpha \times (\text{Primary voltage}) \times (\text{Primary current}) / 1000$$

- $\alpha : 1 \quad 1P2W$
- $: 2 \quad 1P3W(\text{Primary voltage is } 110V \text{ or } 220V)$
- $: \sqrt{3} \quad 3P3W$
- $: 3 \quad 3P4W(\text{Primary voltage is phase voltage})$

Note 6: From the most significant digit to 4 digits can be freely setting in the range from 0.001 to 10000.

Note 7:

| Target of alarm | Setting range |
|-------------------------------------------------------------------|---------------------------------|
| Current demand upper limit alarm | 0~120% of primary current |
| Current demand lower limit alarm | |
| Line voltage upper limit alarm Phase voltage upper limit alarm | 15/11×0~100% of primary voltage |
| Line voltage lower limit alarm Phase voltage lower limit alarm | |
| Electric energy demand upper limit alarm | -120~120% of Full load power |
| Electric energy demand lower limit alarm | |
| Power factor upper limit alarm | -5~100~5% |
| Power factor lower limit alarm | |
| Pulse conversion upper limit alarm | 1~999999.999 |
| Current unbalance rate upper limit alarm | 0.01~999.99 |
| Voltage unbalance rate upper limit alarm | |

Note 8: Multiplicand fixed for each items according to phase wire system, primary voltage and primary current.

(For details, refer to Table 3 Effective Ranges and Multiplicand)

Table 7.3 Group Channel List for Data Set Command (2H) (6/12)

| Hex Group (H) | Channel (H) | Content name | EMU4-LG1-MB | | Data format |
|---------------------|----------------|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|----------------|
| | | | Range | Setting unit | |

Refer to
7.2.4 Data format of Monitoring
by Command (1H) and Setting
by Command (2H)
Data Format(5/7)

⑤

Note1: When the control operation state is RUN, the current time cannot be changed.

Change the current time after setting the control operation state to STOP.

Note2: State before analog output (=02H) is not writable. It can only be read.

State before analog output indicates the initial state before analog output.

Note3: Terminal ID is the ID assigned when the terminal setting is made with Control Unit Engineering Tool (Model:EMU4-KNET).

Check the terminal list on the setting screen of EMU4-KNET and specify the Group(H)/Channel(H) of the terminal which you want to acquire data.

Note4: The Commands are not accepted while the setting of EMU4-CNT-MB is being changed with

Control Unit Engineering Tool (Model:EMU4-KNET).

Note1: b0 (Pulse conversion value upper limit alarm) is available only when external input method setup is Pulse input in EMU4-HD1A-MB.

Note2: b0 (Pulse conversion value upper limit alarm) can monitor both alarm information 1 and alarm information 2 in the 1P2W (2 circuits measurement) setting.

Note3: b2 (Current demand upper/lower limit alarm) is determined by the OR output of each phase.

Note4: b4 (Contact Input) is valid only when the external input method of the main unit is set to "Contact Input".

Note5: For b8 (Voltage upper/lower limit alarm), both circuits can be monitored because the voltage value is a common measurement value for the 1st circuit and the 2nd circuit in the 1P2W (2 circuits measurement) setting.

Note : All contact output status(CH1~CH3) of each terminal can be monitored.

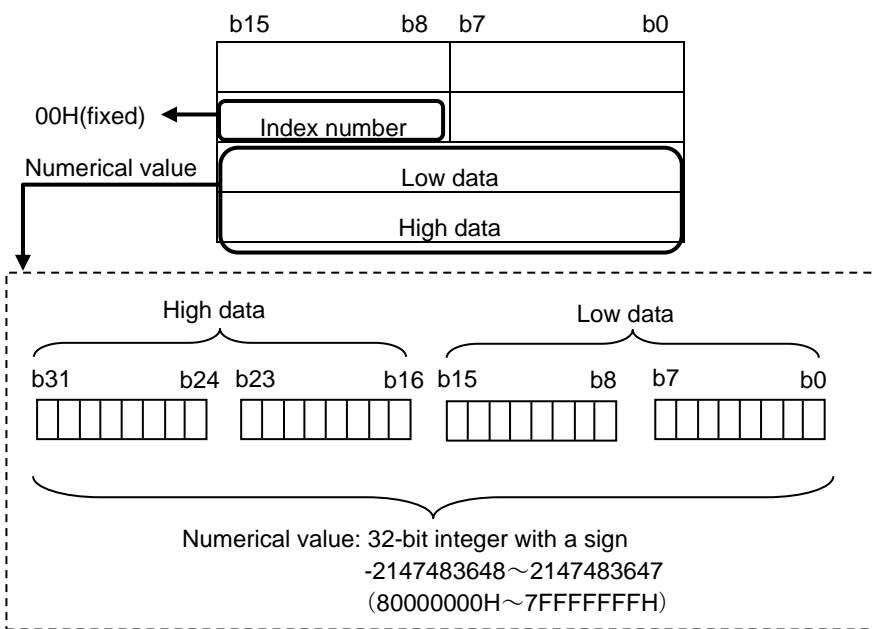

Also,in the case of EMU4-CNT-MB with terminal ID=1,contact output status of each CH can be monitored.

Use CH1 contact output status(Group:E0H,Channel:F4H),

CH2 contact output status(Group:E0H,Channel:F5H),

CH3 contact output status(Group:E0H,Channel:F6H) for monitoring.

4) Sensor code

| | Data | Note |
|---------------|----------|------|
| Direct sensor | 0000000H | |
| 5A sensor | 0000002H | |

5) Control operation state (b31 to b8 is fixed 0.)

| Setting | Data | Note |
|---------|-----------|------|
| STOP | 0000000H | |
| RUN | 00000001H | |

6) Analog output value : The data range is as follows. (b31 to b16 is fixed 0.)

| Analog output specification | Data range | Note |
|-----------------------------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Current output (4~20mA) | 4000(=0FA0H)~20000(=4E20H) | The true value is the value on the left × 0.001 (example) Current value = 4000(0FA0H) : 4.0mA Voltage value = 5000(1388H) : 5.0V |
| Voltage output (0~5V) | 0(=0000H)~5000(=1388H) | |

7) Analog output specification (b31 to b8 is fixed 0.)

| Setting | Data | Note |
|----------------------------|------|------|
| Current output (4~20mA) | 0H | |
| Voltage output (0~5V) | 1H | |
| State before analog output | 2H | |

State before analog output : It indicates the initial state before the analog signal is output.

8) CH1/CH2/CH3 contact output status (b31 to b8 is fixed 0.)

| Setting | Data | Note |
|---------|------|------|
| OFF | 0H | |
| ON | 1H | |

Note1: Below integrated value is reset depending on the models.

EMU4-BD1A-MB: Electric energy, Reactive energy, Operating time, Alarm cumulative time

EMU4-HD1A-MB: Electric energy, Reactive energy, Periodic electric energy, Pulse count value, Pulse converted value, Operating time,
Electric energy converted value, Alarm cumulative time, Number of band monitoring alarm occurrences,
Number of waveform data acquisition cycles

Note2: The following maximum/minimum value data and its occurrence time are reset

(maximum value = current value, minimum value = current value).

Current demand, Voltage, Electric power demand, Power factor, Current unbalance rate, Voltage unbalance rate.

Note3: b5 (contact output) is valid only when the external output method of the main unit is set to "contact output".

Note4: Below integrated value is reset depending on the models.

EMU4-BD1A-MB: Operating time

EMU4-HD1A-MB: Pulse count value, Pulse converted value, Operating time, Periodic electric energy, Electric energy converted value

Note5: Valid only for 2 circuits measurement.

| 0H | | 7H | | 0H | | 1H | |

7.2.5 Effective Range and Multiplicand

The conditions of multiplying factor by setup of each element are shown below.

Table 7.3 Effective Ranges and Multiplicand

| Element | Condition | Mode | Multiplying factor |
|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------|
| Voltage Harmonics voltage | Please refer to (3) Voltage and Harmonics voltage data format for more details. | | |
| Current Current demand Harmonics current | Please refer to (4) Current, demand current, harmonics current data format for more details. | | |
| Active power Active power demand Reactive power Apparent power | Please refer to (1) Electric power and Reactive power data for more details. | | |
| Active energy Reactive energy Energy conversion | Please refer to (2) Electric energy, reactive energy and electric energy conversion for more details. | | |
| Pulse conversion | Please refer to (5) Pulse conversion data (EMU4-HM1-MB only) | | for more details. |
| Current unbalance rate Voltage unbalance rate | - | - | $\times 10^{-2}$ |
| Frequency | - | - | $\times 10^{-1}$ |
| Power factor | - | - | $\times 10^{-1}$ |
| Content rate Harmonics distortion | - | - | $\times 10^{-1}$ |
| Leak current Leak current for resistance | Measuring mode | Low SENS High SENS | $\times 1$ $\times 10^{-2}$ |
| Number of alarm occurrences | - | - | $\times 1$ |
| Alarm cumulative time | Multiplication factor of Alarm cumulative time | $\times 1$ $\times 10$ $\times 100$ $\times 1000$ | $\times 1$ $\times 10$ $\times 100$ $\times 1000$ |
| Waveform band monitoring value | - | - | $\times 10^{-1}$ |
| Number of band monitoring alarm occurrences | - | - | $\times 1$ |
| Number of waveform data acquisition cycles | - | - | $\times 1$ |
| Number over limit A to D | Number over limit Monitoring factor | $\times 1$ $\times 10$ $\times 100$ $\times 1000$ | $\times 1$ $\times 10$ $\times 100$ $\times 1000$ |
| Alarm count | - | - | $\times 1$ |
| Analog output value | - | - | $\times 10^{-3}$ |

Note1: Data is primary voltage (phase voltage) when phase wire system is 3P4W.

(1) Electric power and Reactive power data

<MU4-BD1-MB,EMU4-HD1-MB>

Vertical axis: Primary current setting value Horizontal axis: Primary voltage setting value, Phase wire system setting value.

| Phase Wire system | 1P2W | | | | | | | | 1P3W | 3P3W | | | | | | | | |

Note : Phase wire system : 3P4W is EMU4-HM1-MB, EMU4-A2, EMU4-VA2 only.

Note : 3 digit means three decimal places ($\times 10^{-3}$) and 2 digit means two decimal places ($\times 10^{-2}$) and 1 digit means 1 decimal places ($\times 10^{-1}$).

Note : x1 means integer×1 and x10 means integer×10.

(1) Electric energy, reactive energy and electric energy conversion

Note : Phase wire system : 3P4W is EMU4-HD1A-MB only.

Note : 2 digit means two decimal places ($\times 10^{-2}$) and 1 digit means 1 decimal places ($\times 10^{-1}$).

Note : x1 means integer $\times 1$, x10 means integer $\times 10$, x100 means integer $\times 100$, x1000 means integer $\times 1000$ and x10000 means integer $\times 10000$.

| 25000 | x10 | x10 | x10 | x10 | x10 | x10 | x10 | x100 |
| 30000 | x10 | x10 | x10 | x10 | x10 | x10 | x10 | x100 |

Note : Phase wire system is only EMU4-HM1-MB, EMU4-A2 and EMU4-VA2.

Note : 2 digit means two decimal places ($\times 10^{-2}$) and 1 digit means 1 decimal places ($\times 10^{-1}$).

Note : x1 means integer×1 and x10 means integer×10 and x100 means integer×100 and x1000 means integer×1000 and x10000 means integer×10000.

(2) Voltage and Harmonics voltage data format

<EcoMonitorLight>

| | |
|-----------------|----------------------------|
| Primary voltage | EMU4-BD1-MB EMU4-HD1-MB |
| Less than 300V | Decimal 1 digit |
| 300V or more | Intenger×1 |

Note: This value is primary voltage (phase voltage) when wire phase system is 3P4W.

<EcoMonitorLight>

| | |
|-----------------|------------------------------|
| Primary voltage | EMU4-BD1A-MB EMU4-HD1A-MB |
| Less than 300V | Decimal 1 digit |
| 300V or more | Intenger×1 |
| Less than 3000V | |
| 3000V or more | Intenger×10 |

Note: This value is primary voltage (phase voltage) when wire phase system is 3P4W.

<EcoMonitorPlus>

| | |
|-----------------|---------------------------------------------------|
| Primary voltage | EMU4-BM1-MB EMU4-HM1-MB EMU4-A2 EMU4-VA2 |
| Less than 300V | Decimal 1 digit |
| 300V or more | Intenger×1 |
| Less than 3000V | |
| 3000V or more | Intenger×10 |

Note: This value is primary voltage (phase voltage) when wire phase system is 3P4W.

(3) Current, demand current, harmonics current data format

<EMU4-BD1-MB, EMU4-HD1-MB, EMU4-BD1A-MB, EMU4-HD1A-MB, EMU4-BM1-MB, EMU4-HM1-MB,
EMU4-A2, EMU4-VA2>

| | |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Primary voltage | EMU4-BD1-MB EMU4-HD1-MB EMU4-BD1A-MB EMU4-HD1A-MB EMU4-BM1-MB EMU4-HM1-MB EMU4-A2 EMU4-VA2 |
| Less than 40A | Decimal 3 digit |
| 40A or more Less than 400A | Decimal 2 digit |
| 400A or more Less than 4000A | Decimal 1 digit |
| 4000A or more | Intenger×1 |

(4) Pulse conversion data

| Pulse converted rate | | EMU4-HD1A-MB EMU4-HM1-MB EMU4-PX4 |
|----------------------|-----------------|-----------------------------------------|
| 0.001 or more | Less than 0.01 | Decimal 3 digit |
| 0.01 or more | Less than 0.1 | Decimal 2 digit |
| 0.1 or more | Less than 1 | Decimal 1 digit |
| 1 or more | Less than 10 | Intenger×1 |
| 10 or more | Less than 100 | Intenger×10 |
| 100 or more | Less than 1000 | Intenger×100 |
| 1000 or more | Less than 10000 | Intenger×1000 |

7.2.6 About Error Occurrence

When the command and related data transmitted to Measuring Unit is improper or Measuring Unit is in H/W error, RX (n+7)A (Error status flag) becomes 1 (ON), the error code shown in Table 7.4 is returned as reply data.

Table 7.4 Error Code

| Error Description | Error Code (Hex.) |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Illegal command or packet length | 40h |
| Invalid group number | 41h |
| Invalid channel number | 42h |
| Measuring Unit is in set-up mode | 43h, 44h |
| Invalid unit number | 45h |
| Invalid data for set-up | 51h |
| While the control operation state is RUN, the current time of EMU4-CNT-MB or the set value of the extension unit was changed. | 0Eh |
| EMU4-CNT-MB received a request of Data Monitor(1H) or Data Set(2H) from Superior Monitoring Systems while collecting the measurement value held by the extension unit. | 0Fh |
| A communication error occurred between EMU4-CNT-MB(Parent terminal) and EMU4-CNT-MB(Child terminal). | 11h |

If an error occurs, the error code is written into the RWn as shown in the figure below, and RX(n+7)A (error status flag) is turned on (error occurrence) and RX(n+7)B (remote READY) is turned off (normal communication stop).

For the error resetting method, refer to "6.3 Error Communication".

8. Abbreviations and Special Terms

Abbreviations and special terms used in this manual are shown below:

| Abbreviation and Special Terms | Description |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Master station | Station which controls remote stations and local stations. One station is required for one system. |
| Local station | Station with the CPU which can communicate with master station and other local stations. |
| Remote I/O station | Remote station which deals with bit information only. |
| Remote device station | Remote station which deals with bit information and word information. |
| Remote station | General name for remote I/O station and remote device station. Controlled by a master station. |
| Intelligent device station | Station that can perform transient transmission. |
| RX | Remote input |
| RY | Remote output |
| RWw | Remote register (write area) |
| RWr | Remote register (read area) |
| Demand value | The demand value is an approximate average value during the demand time period. When it is set to 0, each demand present value becomes equivalent to the present value. |
| Command | Identification code allocated to items to be monitored or set. Energy measuring unit uses a special-purpose command that is transmitted to monitor each measurement value or set each parameter. |

9. Program Example

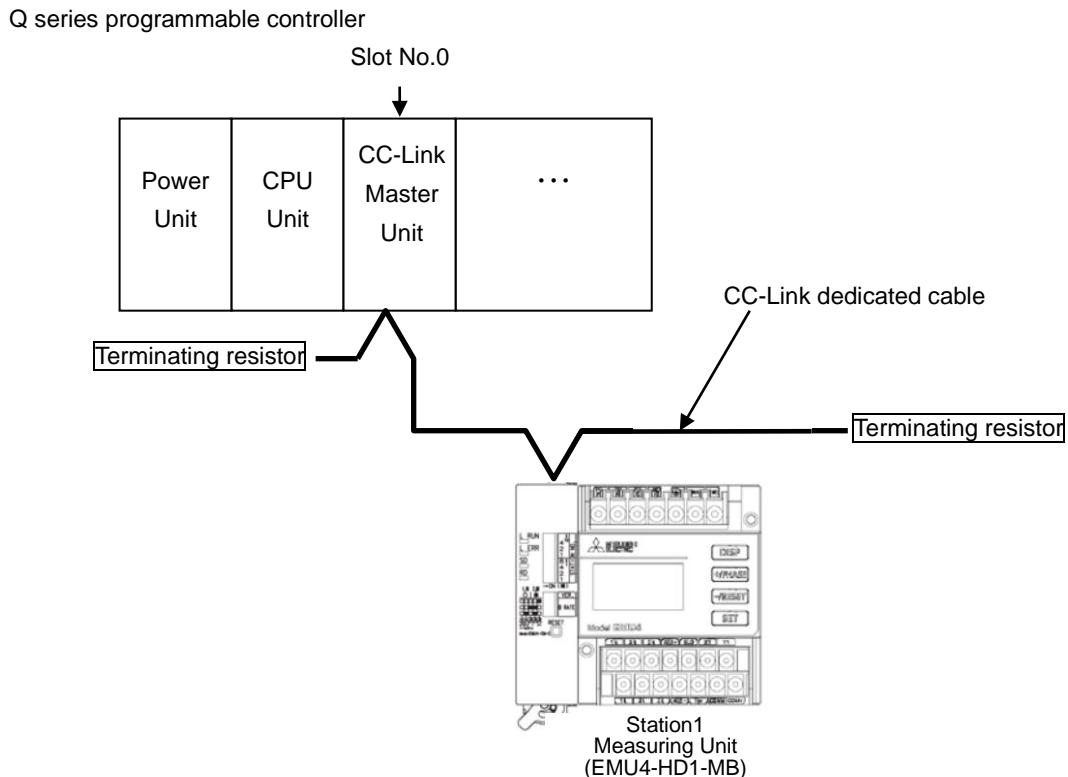

9.1 Sample program 1

(1) Program Content

This program example is assumed the system configuration in below.

- CC-Link master unit: Mounting in Slot No.0.
- CC-Link master unit: First XY: 0000.
- CC-Link parameter setting: Please refer to (3) Parameter Settings.
- No. of Measuring unit (EMU4-HD1-MB): 1
- Station No. of Measuring unit (EMU4-HD1-MB): 1

(2) System Configuration

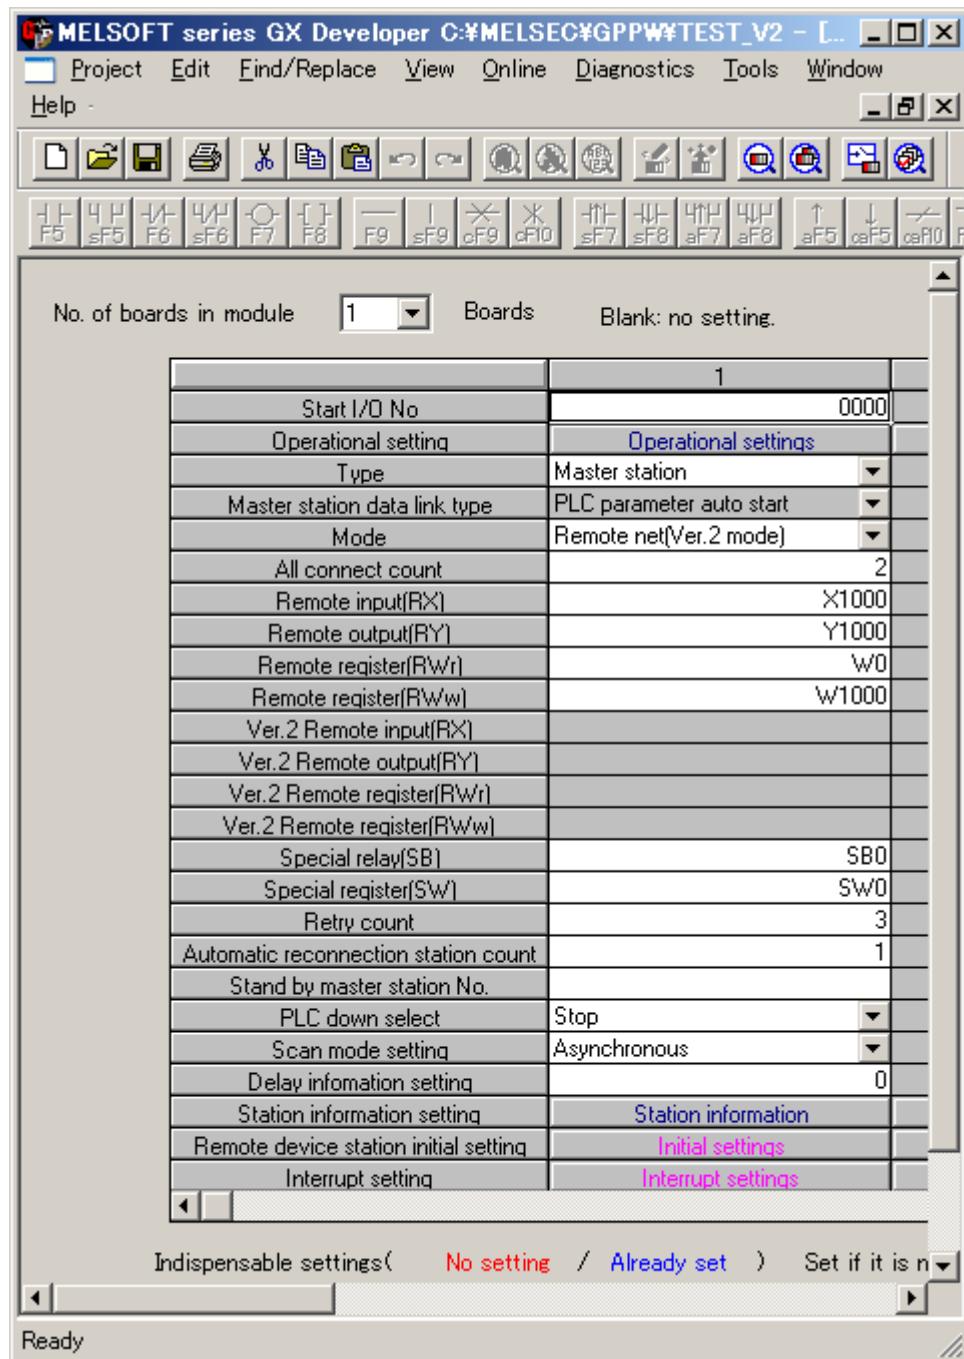

(3) Parameter Settings

Parameter settings are set as following with GX Developer.

9.1.1 Network Parameter Settings and Auto Refresh Parameter Settings

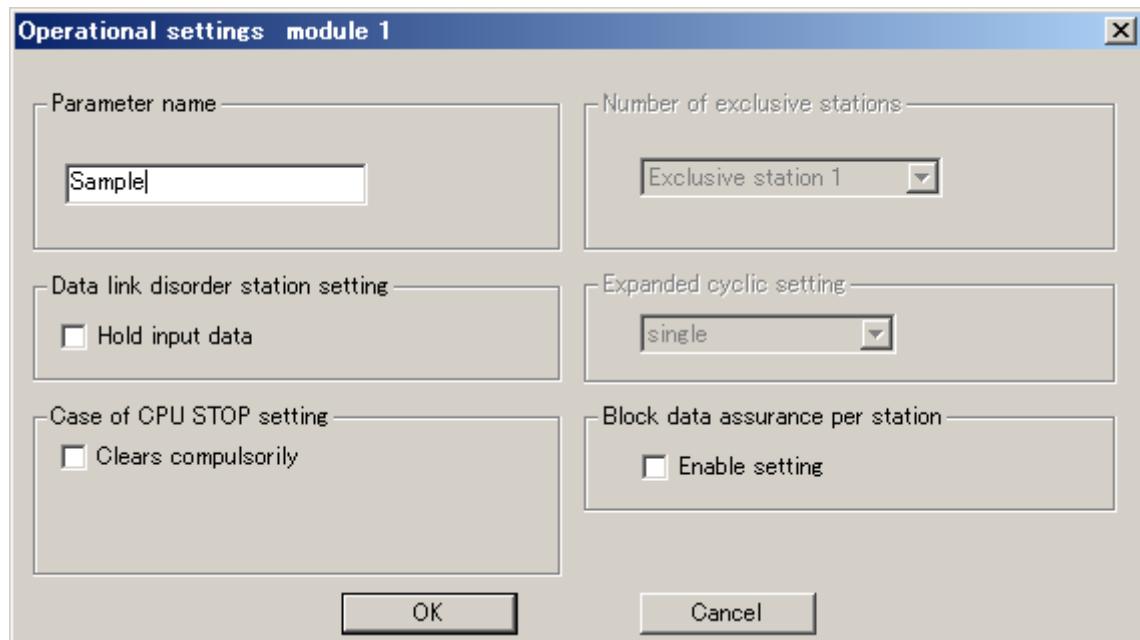

The following is shown CC-Link network parameter settings and auto refresh parameter settings.

| Setting Item | Description | Example for settings | Remarks |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| No.of boards in Module | Set the "No. of boards in module" for which the network parameters are to be set. | 1 | |
| Start I/O No | Set the "Start I/O No." for the master station | 0000 | Set the same setting of Start XY in PC parameter setting |
| Type | Set the station type. | Master station | |
| Mode | Set the CC-Link mode. | Remote net (Ver.2 mode) | "Remote net ver.2 mode" and "Remote net additional mode" can be also used in case of the QJ61BT11N. |
| All connect count | Set the total number of connected stations in the CC-Link system including reserved stations | 1 | |
| Remote input (RX) | Set the remote input (RX) refresh device. | X100 | Device name - Select from X, M, L, B, D, W, R or ZR. Device number - Within the range of the device points that the CPU has. |
| Remote output (RY) | Set the remote output (RY) refresh device. | Y100 | Device name - Select from Y, M, L, B, T, C, ST, D, W, R or ZR. Device number - Within the range of the device points that the CPU has. |
| Remote register (RW _r) | Set the remote register (RW _r) refresh device. | W300 | Device name - Select from M, L, B, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has. |
| Remote register (RW _w) | Set the remote register (RW _w) refresh device. | W400 | Device name - Select from M, L, B, T, C, ST, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has. |
| Special relay (SB) | Set the link special relay (SB) refresh device. | SB0 | Device name - Select from M, L, B, D, W, R, SB or ZR. Device number - Within the range of the device points that the CPU has. |
| Special register (SW) | Set the link special register (SW) refresh device. | SW0 | Device name - Select from M, L, B, D, W, R, SW or ZR. Device number - Within the range of the device points that the CPU has. |
| Retry count | Set the number of retries for "Retry count", when a communication error occurs. | 3 | |
| Automatic reconnection station count | Set the number of modules that can return to system operation by a single link scan. | 1 | |
| Standby master station No. | Set the station number for the standby master station | Blank | Blank: No standby master station specified. |
| PLC down select | Set the data link status for "PLC down select", when a master station programmable controller CPU error occurs | Stop | |
| Scan mode setting | Set whether the link scan for the sequence scan is synchronous or asynchronous | Asynchronous | |
| Delay information setting | Set for the link scan delay time. | 0 | 50μs |

9.1.2 Operational Settings

Operational settings are as follows.

9.1.3 Station Information Settings

Station information settings are as follows.

| Station No. | Station type | Expanded cyclic setting | Exclusive station count | Remote station points | Reserve/invalid station select | Intelligent buffer select(word) |
|-------------|-----------------------------|-------------------------|-------------------------|-----------------------|--------------------------------|---------------------------------|
| | | | | | | Send |
| | | | | | | Receive |
| 1 / 1 | Ver.2 Remote device station | octuple | Exclusive station 1 | 128 points | No setting | Automatic |

At the bottom are buttons: Default, Check, End, and Cancel.

9.1.4 Parameter Settings

(1) Initial communication sample program

Sample program measuring unit turn ON or initial processing after reset.

Measuring unit data link status

Initial communication

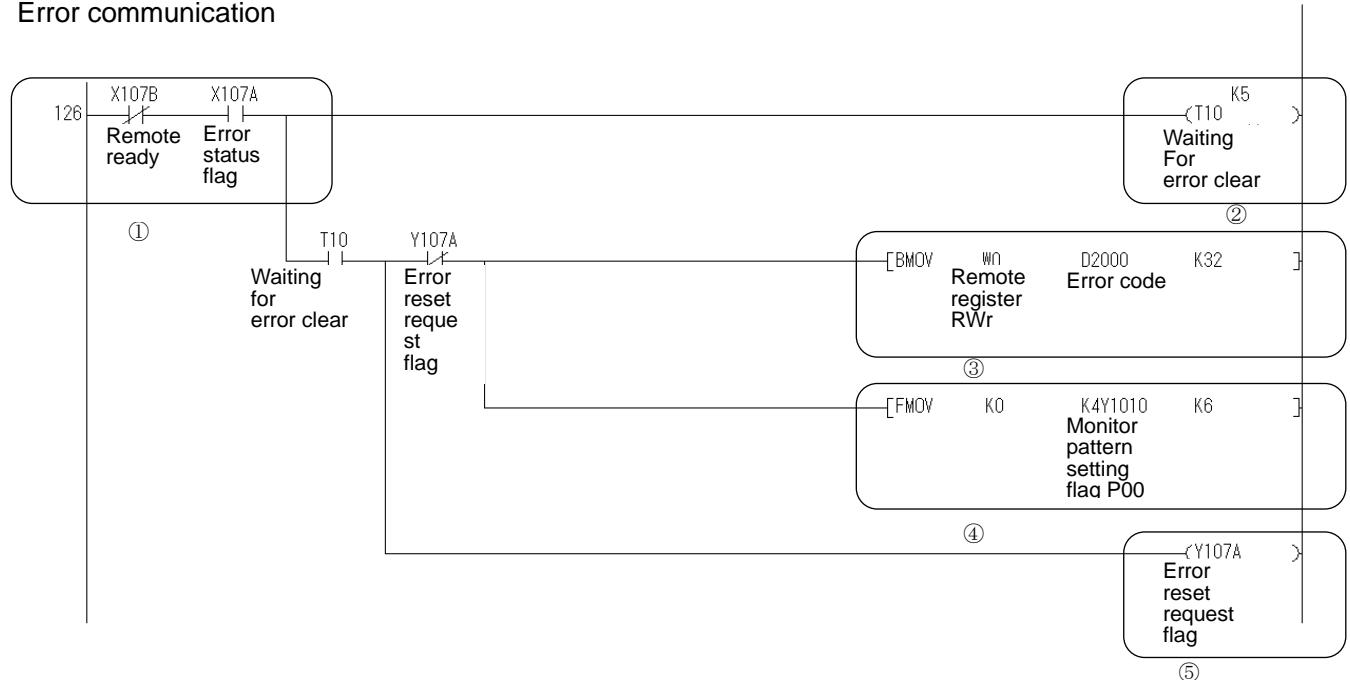

- 1) Check data link status in each station.
- 2) Initial data setting completion flag (Y1078) turns to ON after Initial data processing request (X1078) turns to ON.
- 3) Initial data processing request (X1078) turns to OFF after Initial data setting completion flag (Y1078) turns to ON.

Device allocation

| Device No. | Contents | Note | | | | | | | | | | | | | | | | | | | | | | | | | |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----|----|----|---|---|---|----|----|---|----|----|----|----|---|----|----|----|----|---|----|----|--------------------------------------------------------------------------------------------------------------------------------------------|
| X0 | Status of CC-Link master station OFF: Unit normal ON: Unit error | Device No. is changed by the input number of CC-Link master unit. <Example> When Input No. is "X/Y30" of CC-Link master unit. X0 → X30, X1 → X31, XF → X3F | | | | | | | | | | | | | | | | | | | | | | | | | |
| X1 | Data status of CC-Link master station OFF: Data link stop ON: Data link | | | | | | | | | | | | | | | | | | | | | | | | | | |
| X0F | Unit ready of CC-Link master station OFF: 1) Error in setting of SW in Unit. 2) When the Unit error signal (Xn0) turns to ON. ON: It turns to ON automatically when unit is moveable. | | | | | | | | | | | | | | | | | | | | | | | | | | |
| X1078 | Remote input: RX(n+7)8 Initial data setting completion flag | It is changed by the setting of the remote input (RX) refresh device (CC-Link parameter setting) and station No. of leak current monitoring device. Please refer to 7.1.1 for more details. | | | | | | | | | | | | | | | | | | | | | | | | | |
| Y1078 | Remote output: RY(n+7)8 Initial data processing completion flag | It is changed by the setting of the remote output (RY) refresh device (CC-Link parameter setting) and station No. of leak current monitoring device. Please refer to 7.1.2 for more details. | | | | | | | | | | | | | | | | | | | | | | | | | |
| SW80 to SW83 | Data link status 0: normal 1: data link error <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <th>b15</th><th>b14</th><th>~</th><th>b1</th><th>b0</th></tr> <tr> <td>16</td><td>15</td><td>~</td><td>2</td><td>1</td></tr> <tr> <td>32</td><td>31</td><td>~</td><td>18</td><td>17</td></tr> <tr> <td>48</td><td>47</td><td>~</td><td>34</td><td>33</td></tr> <tr> <td>64</td><td>63</td><td>~</td><td>50</td><td>49</td></tr> </table> | b15 | b14 | ~ | b1 | b0 | 16 | 15 | ~ | 2 | 1 | 32 | 31 | ~ | 18 | 17 | 48 | 47 | ~ | 34 | 33 | 64 | 63 | ~ | 50 | 49 | It is changed by the setting of link relay (SW) refresh device (CC-Link parameter setting). Please refer to manual of each CC-Link system. |
| b15 | b14 | ~ | b1 | b0 | | | | | | | | | | | | | | | | | | | | | | | |
| 16 | 15 | ~ | 2 | 1 | | | | | | | | | | | | | | | | | | | | | | | |
| 32 | 31 | ~ | 18 | 17 | | | | | | | | | | | | | | | | | | | | | | | |
| 48 | 47 | ~ | 34 | 33 | | | | | | | | | | | | | | | | | | | | | | | |
| 64 | 63 | ~ | 50 | 49 | | | | | | | | | | | | | | | | | | | | | | | |
| M0 to M63 | Data link error in each station OFF: normal ON: data link error | Device | | | | | | | | | | | | | | | | | | | | | | | | | |

(2) Error communication sample program

Error communication

- ① Confirming remote ready (X107B) turns to OFF and Error status flag (X107A) turns to ON when error occurred in measuring unit.
- ② Waiting time from error occurred to error reset.
- ③ Error code is received to remote register (RW_r) W000 to W001F. Read received error code to device D2000 to D2031.
- ④ Monitor pattern setting flag (Y1010 to Y106F) after error occurred.
- ⑤ Turn ON the error reset flag (Y107A) after reset.
- ⑥ Error status flag turns to OFF after error reset. Error reset flag (Y107A) turns to OFF.
Restart communication to measuring unit after error reset flag (Y107A) turns to OFF and remote ready (X107B) turns to ON.

Device allocation

| Device No. | Contents | Note |
|----------------|---------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| X107A | Remote input of measuring unit: RX(n+7)A Error status flag | It is changed by the setting of the remote input (RX) refresh device (CC-Link parameter setting) and station No. of measuring unit. |
| X107B | Remote input of measuring unit: RX(n+7)B Remote READY | Please refer to 7.1.1 for more details. |
| Y107A | Remote output: RY(n+7)A Error reset status flag | It is changed by the setting of the remote output (RY) refresh device (CC-Link parameter setting) and station No. of measuring unit. Please refer to 7.1.2 for more details. |
| W0000 to W001F | Remote register: RW _r Data for reading | It is changed by the setting of the remote register (RW _r) refresh device (CC-Link parameter setting) and station No. of measuring unit. Please refer to 7.1.2 for more details. |
| D2000 to D2032 | Error code for receiving | Device (Selectable) Refer to table 7.2 error code for more details. |

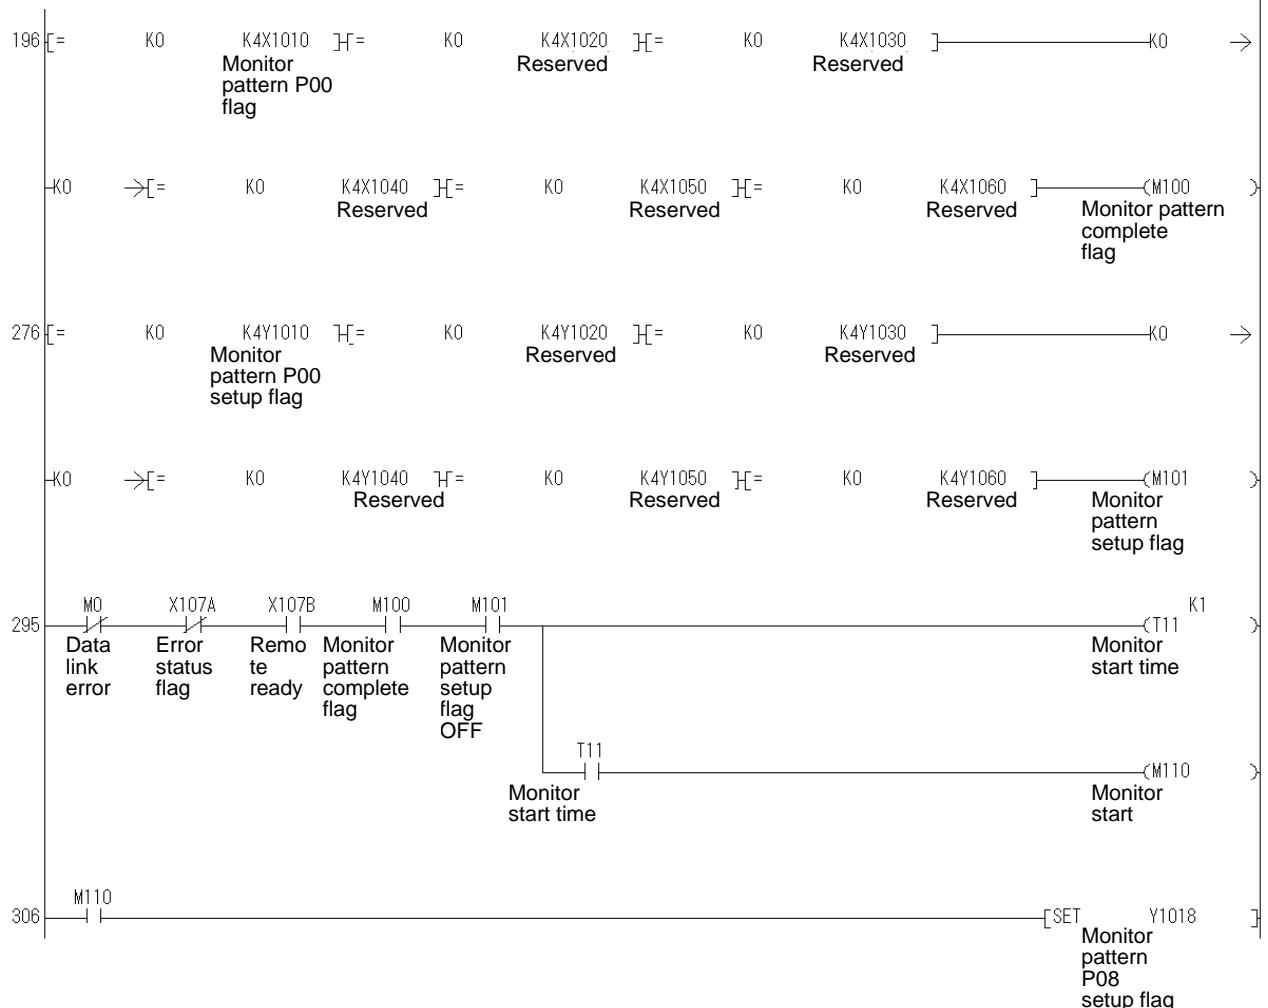

(3) Normal communication sample program

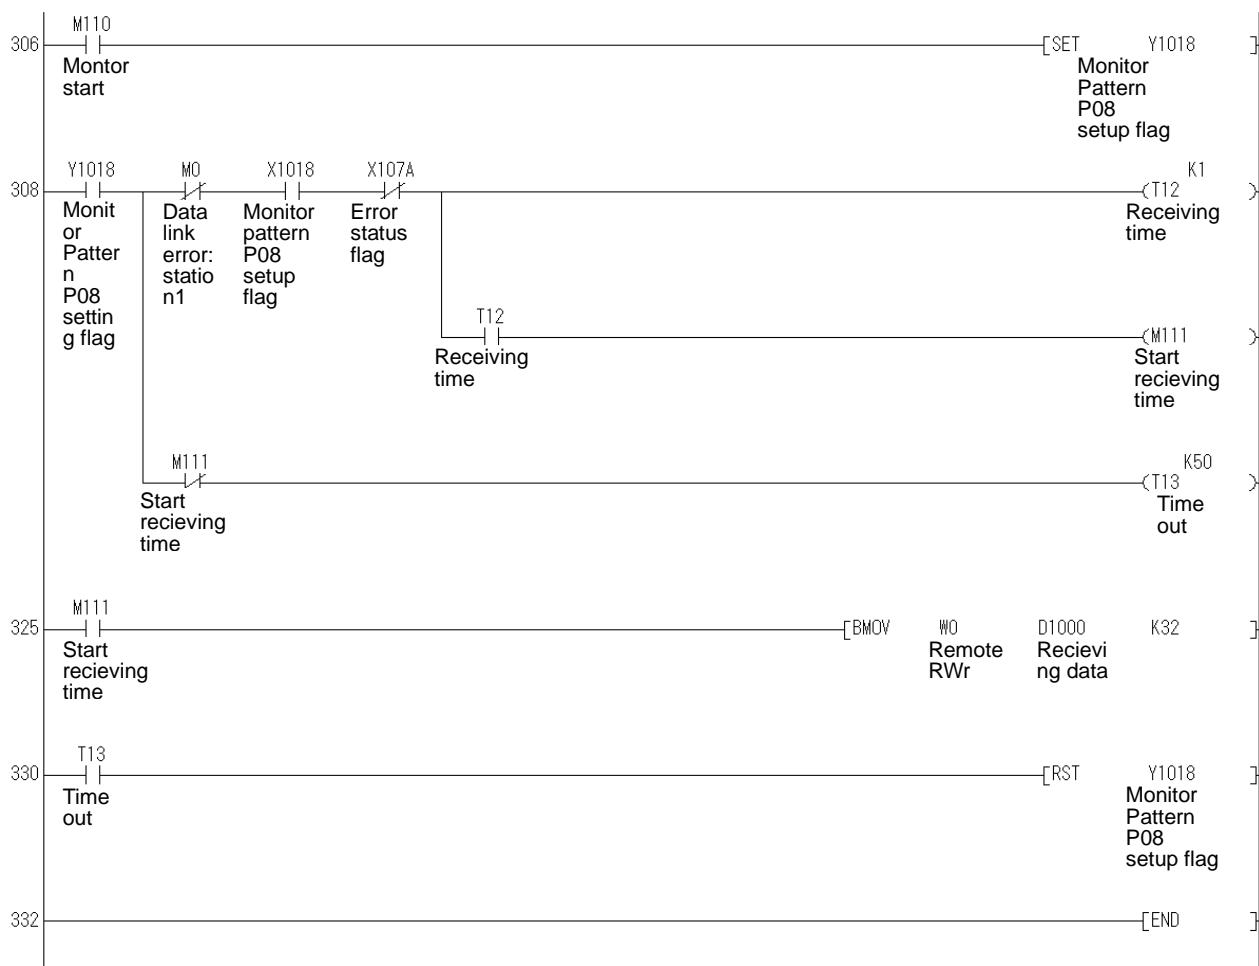

After initial communication, you can monitor the measured value and setup the setting value when normal communication status is normal (Remote ready is ON)

Describing following 3 programs as a sample program.

| | Note | Measuring items | Page |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Monitoring example by pattern | Sample program reading measuring items to programmable controller devices using monitor pattern P08 setting flag (RY(n+1)8) Measured value is stored in programmable controller device | Phase 1 current Phase 2 current Phase 3 current 1-2 voltage 2-3 voltage 3-1 voltage Active power Active energy(import) | 129 |
| Monitoring example by command (1H) | Sample program reading measuring items to programmable controller devices using monitor pattern P00 setting flag (RY(n+1)0) writing command (channel group) to remote register RWw. Measured value is stored in programmable controller device | Phase 1 current 1-2 voltage Active power Reactive power Power factor Frequency Active energy(import) Reactive energy(import lag) | 133 |
| Monitoring example by command (2H) | Sample program reset all alarms using monitor pattern P00 setting flag (RY(n+1)0) | Alarm all reset | 138 |

(a) Monitoring sample using pattern
Normal communication (Monitoring by pattern)

- ① Confirming monitor pattern setting completion flag (X1010 to X106F) is OFF.
- ② Confirming monitor pattern setting flag (Y1010 to Y106F) is OFF.
- ③ Start monitor communication (M110) after confirming monitorable condition (M0 OFF), X107A is OFF, X101B is ON (remote ready), M100 is ON and M101 is ON.
- ④ Monitor pattern P08 setting flag (Y1018) turns to ON when Starting monitor communication (M110).
- ⑤ Monitor pattern P08 setting completion flag (X1018) turns to ON after monitor pattern P08 setting flag (Y1018) turns to ON and replay the data.
- ⑥ Measured data is transmitting to receiving data (D1000 to D1031) from remoter register RWr (W1000 to W101F) after monitor communication starting (M110) is ON
 - * While monitor pattern P08 setting flag (Y1018) is ON, measured data in remote register RWr (W0000 to W001F) is update.
- ⑦ Monitor pattern setting completion flag (X1018) turns to OFF when time out (T13) turns to ON.

| M112 | Start data receiving | Devices in a CPU module.(User selectable). |
| T13 | Time out | Devices in a CPU module.(User selectable). |
| W0000 to W0001F | Remote register RW _r Storing reply data | Remote register changed according to setup of remote register refresh device and station No. of measuring unit. |
| D1000 to D1031 | Receiving data | Devices in a CPU module.(User selectable). |

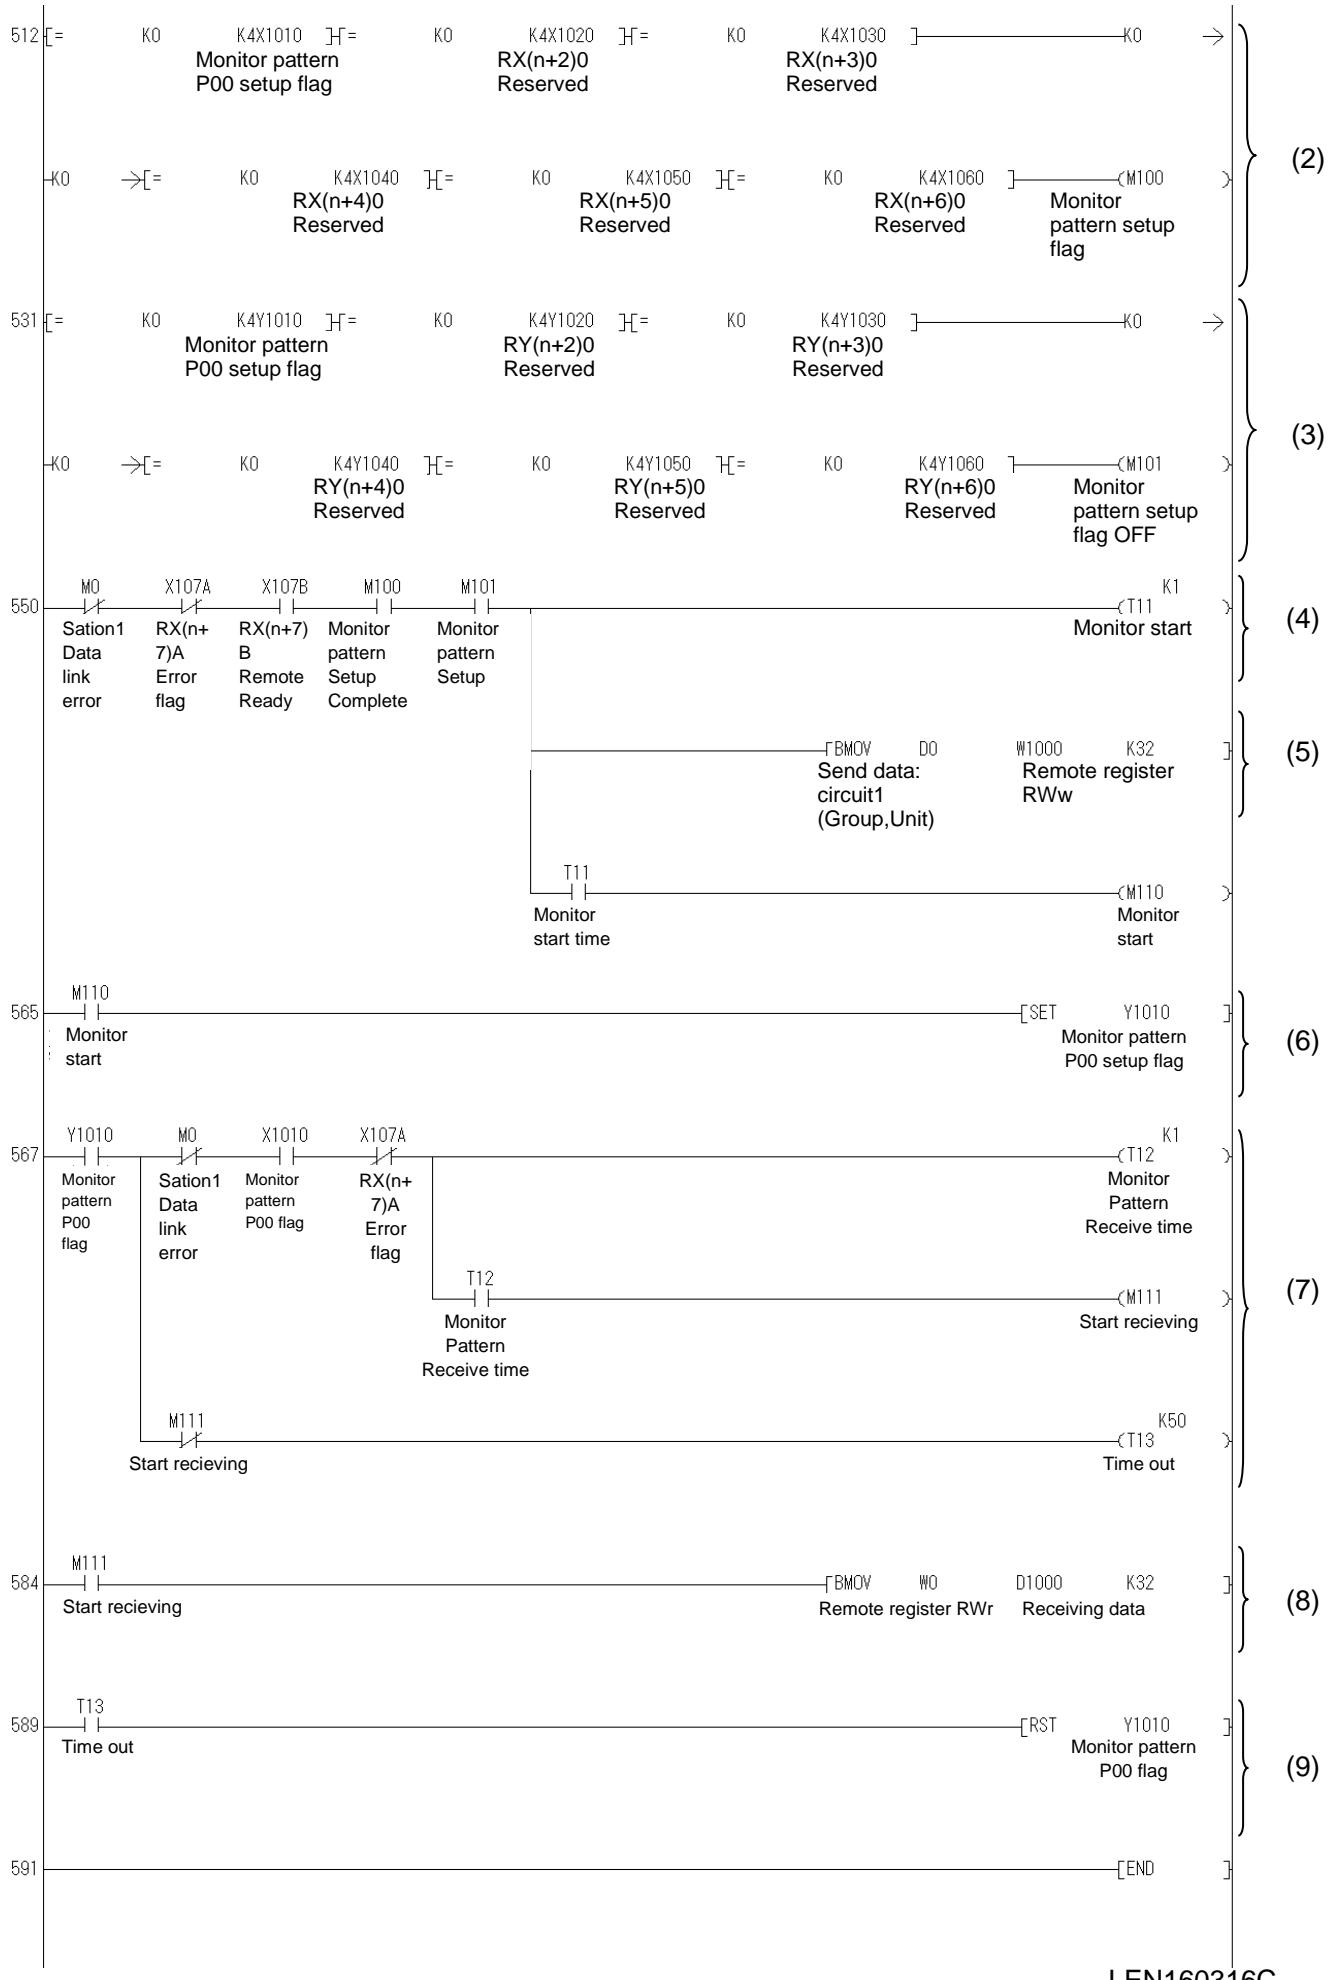

| Device | Contents | Note |
|--------------|-------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| | Content of receive data depends on monitor pattern. Data details of monitor pattern P08 showed in below table. | |
| D1000 | Device | Contents |
| D1001 | Phase 1 current | H2101 Channel(H21) , Group (01) |
| D1002,D1003 | | Multiplying factor Measured value=Data×Multiplying factor |
| D1004 | Phase 1 current | Data |
| D1005 | | H4101 Channel(H41) , Group (01) |
| D1006,D1007 | | Multiplying factor Measured value=Data×Multiplying factor |
| D1008 | Phase 1 current | Data |
| D1009 | | H6101 Channel(H61) , Group (01) |
| D1010, D1011 | | Multiplying factor Measured value=Data×Multiplying factor |
| D1012 | 1-2 voltage | Data |
| D1013 | | H2105 Channel(H21) , Group (05) |
| D1014, D1015 | | Multiplying factor Measured value=Data×Multiplying factor |
| D1016 | 2-3 voltage | Data |
| D1017 | | H4105 Channel(H41) , Group (05) |
| D1018, D1019 | | Multiplying factor Measured value=Data×Multiplying factor |
| D1020 | 3-1 voltage | Data |
| D1021 | | H6105 Channnel(H61), Group (05) |
| D1022, D1023 | | Multiplying factor Measured value=Data×Multiplying factor |
| D1024 | Electric power | Data |
| D1025 | | H0107 Channel(H01) , Group (07) |
| D1026, D1027 | | Multiplying factor Measured value=Data×Multiplying factor |
| D1028 | Electric Energy | Data |
| D1029 | | H0180 Channel(H01) , Group (80) |
| D1030, D1031 | | Multiplying factor Measured value=Data×Multiplying factor |

(b) Monitoring sample using command (1H)

*Normal communication

LEN160316C

- (1) Write command send to measuring unit in device.
- (2) Confirm the monitor pattern setup complete flag (X1010-X106F) is OFF.
- (3) Confirm the monitor pattern setup flag (Y1010-Y106F) is OFF.
- (4) Monitoring start after confirm X107A is OFF, X101B is ON, M100 is ON, M101 is ON.
- (5) Write send command at (1) in remote register RWw (W1000-W101F).
- (6) Monitor pattern P00 setup flag turn to ON in monitor start (M110).
- (7) After Monitor pattern P00 setup flag (Y1010) turns to ON and reply data according to monitor pattern, Monitor pattern P00 setup complete flag (X1010) turns ON.
After confirming monitor pattern P00 setup complete flag (X1010), Error flag (X107A) is not ON, time out is conducted.
- (8) Transfer the measured data to receive data (D1000-D1031) when monitor start (M110) is ON.
- (9) After Time out (T13) is ON, Monitor pattern P00 setup flag (Y1010) turns to OFF.

(c) Monitoring sample using command (2H)

*Normal communication (2H)

- (1) Write command send to measuring unit in device.
- (2) Confirm the monitor pattern setup complete flag (X1010-X106F) is OFF.
- (3) Confirm the monitor pattern setup flag (Y1010-Y106F) is OFF.
- (4) Confirm the alarm all reset M1001 is ON when M1000 is ON.
M1001 turns to OFF when X101B is ON in (6)
- (5) Command is written to remote register RWw (W000 to W001F) after M1001 is ON, M0 is OFF, CX107A is OFF, X101B is ON.
- (6) M110 turns to ON after (5).
- (7) Y1010 turns to ON in M110.
- (8) After Monitor pattern P00 setup flag (Y1010) turns to ON and reply data according to monitor pattern, Monitor pattern P00 setup complete flag (X1010) turns ON.
After confirming monitor pattern P00 setup complete flag (X1010), Error flag (X107A) is not ON, time out is conducted.
- (9) Transfer the measured data to receive data (D1000-D1031) when monitor start (M110) is ON.
- (10) After Time out (T13) is ON, Monitor pattern P00 setup flag (Y1010) turns to OFF.

9.2 Sample program 2

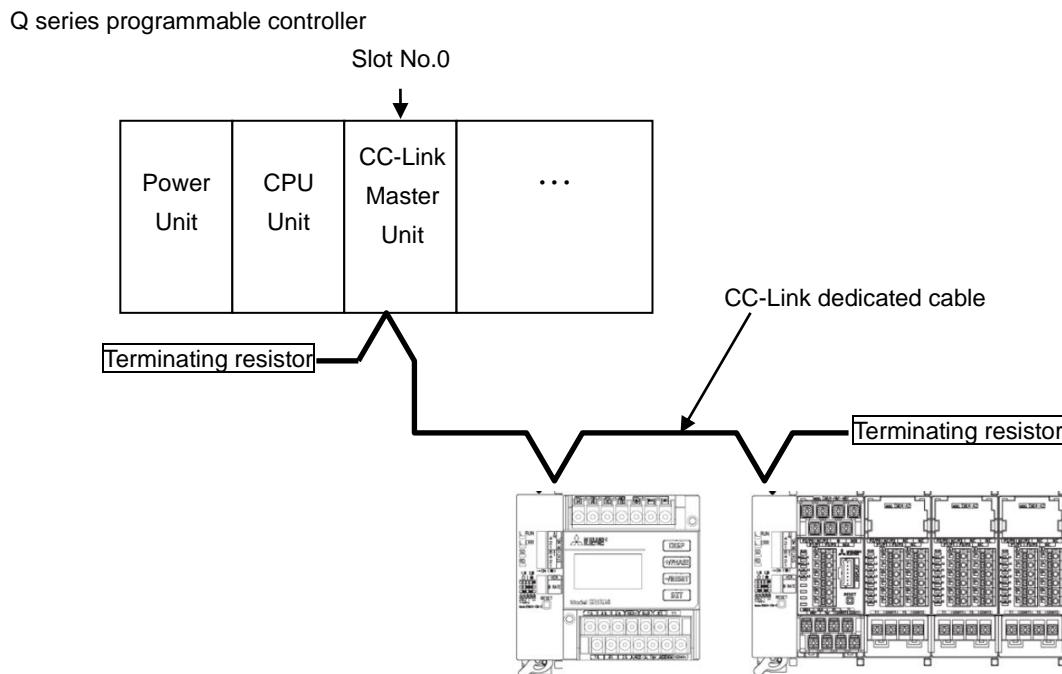

(1) Program Content

This program example is assumed the system configuration in below.

- CC-Link master unit: Mounting in Slot No.0.
- CC-Link master unit: First XY: 0000.
- Station No. of Measuring unit (EMU4-HD1-MB): 1
- Station No. of Measuring unit (EMU4-HM1-MB + EMU4-A2x3): 2

Note: The refresh set with the automatic refresh parameters and the refresh executed with the FROM/TO instructions cannot be performed simultaneously.

(2) System Configuration

*Read data

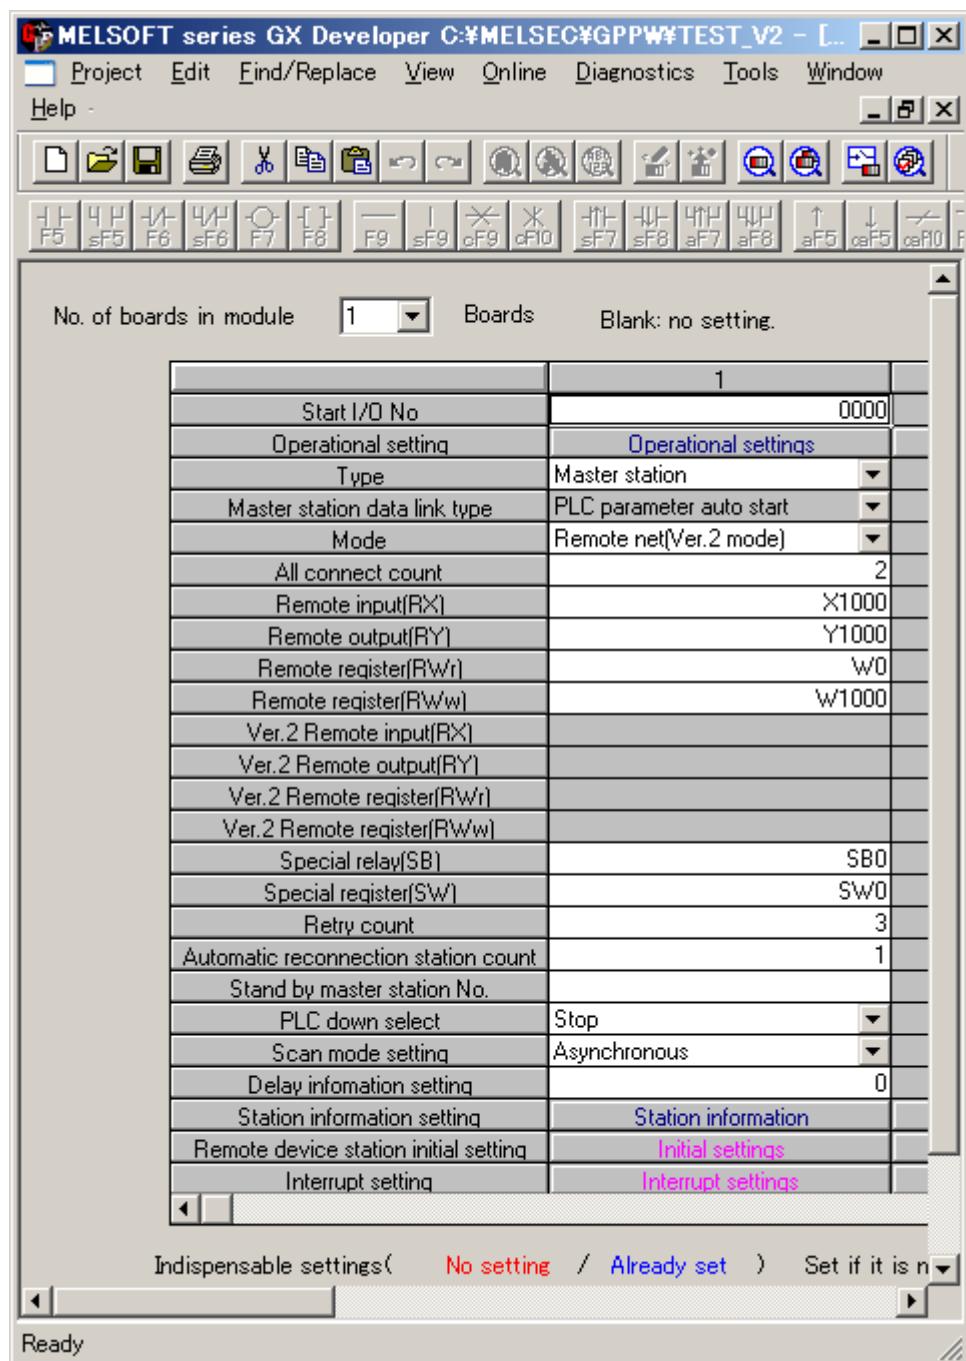

| Station | Model | Circuit No. | Data |
|----------|-------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Station1 | EMU4-HD1-MB | - | <Monitor using monitor pattern P08> Phase 1 current, Phase 2 current, Phase 3 current, 1-2 voltage, 2-3 voltage, 3-1 voltage, Active power, Active energy |
| Station2 | EMU4-HM1-MB | Circuit 1 | <Monitor using monitor pattern P00> Reactive power, Power factor, Reactive energy(LAG) |
| | | | <Monitor using monitor pattern P08> Phase 1 current, Phase 2 current, Phase 3 current, 1-2 voltage, 2-3 voltage, 3-1 voltage, Active power, Active energy(import) |
| | EMU4-A2 | Circuit 2,3 | <Monitor using monitor pattern P17,25,33,41,49,57> |
| | EMU4-A2 | Circuit 4,5 | Phase 1 current demand, Phase 2 current demand, Phase 3 current demand, Active power demand, Power factor, Frequency, Reactive power, Reactive energy. |
| | EMU4-A2 | Circuit 6,7 | |

(3) Parameter Settings

Parameter settings are set as following with GX Developer.

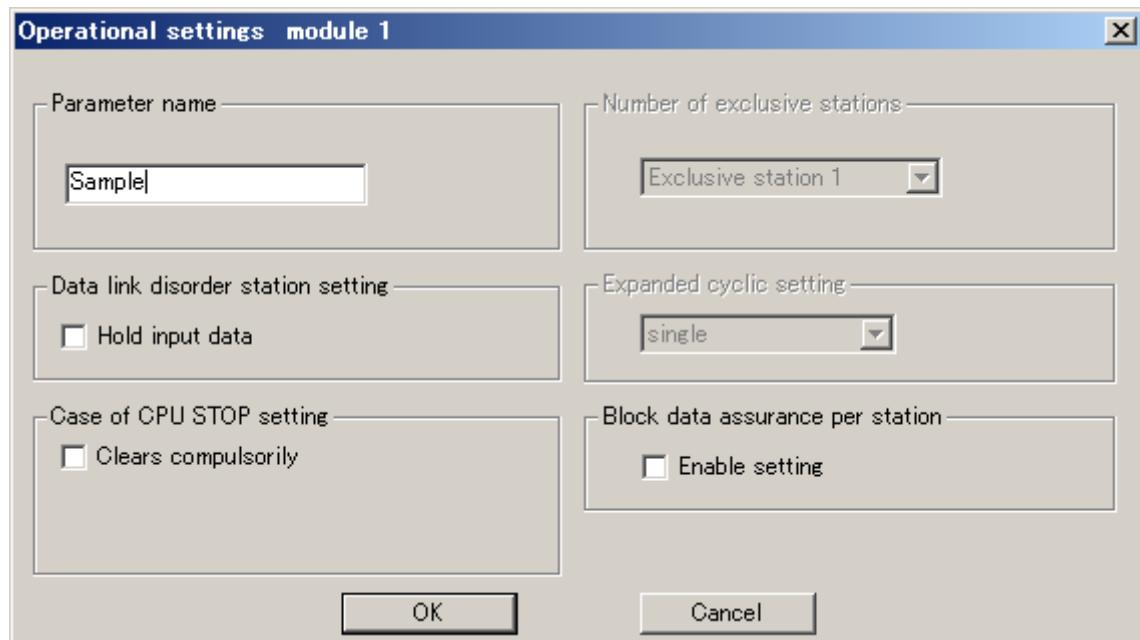

9.2.1 Network Parameter Settings and Auto Refresh Parameter Settings

The following is shown CC-Link network parameter settings and auto refresh parameter settings.

9.2.2 Operational Settings

Operational settings are as follows.

9.2.3 Station Information Settings

Station information settings are as follows.

| CC-Link station information. Module 1 | | | | | | | |
|---------------------------------------|-----------------------------|-------------------------|-------------------------|-----------------------|--------------------------------|---------------------------------|---------|
| Station No. | Station type | Expanded cyclic setting | Exclusive station count | Remote station points | Reserve/invalid station select | Intelligent buffer select(word) | |
| | | | | | | Send | Receive |
| 1/1 | Ver.2 Remote device station | octuple | Exclusive station 1 | 128 points | No setting | | |
| 2/2 | Ver.2 Remote device station | octuple | Exclusive station 1 | 128 points | No setting | | |

At the bottom are buttons: Default, Check, End, and Cancel.

9.2.4 Device Allocation

Allocation of transmitted device

| Items | Contents | Device No. | Note |
|----------------------------------|------------------------------------------------------------|----------------|-------------------------------------------------------|
| Remote input (RX) | Station number 1: Remote input (RX00 to RX7F) | X1000 to X107F | Set X1000 to remote input (RX) refresh device. |
| | Station number 2: Remote input (RX00 to RX7F) | X1080 to X10FF | |
| Remote output (RY) | Station number 1: Remote output (RY00 to RY7F) | Y1000 to Y107F | Set Y100 to remote output (RY) refresh device. |
| | Station number 2: Remote output (RY00 to RY7F) | Y1080 to Y10FF | |
| Remote register (RWr) | Station number 1: Remote register(RWr0 to RWr3) | W0000 to W001F | Set W0000 to remote register (RWr) refresh device. |
| | Station number 2: Remote register (RWr0 to RWr3) | W0020 to W003F | |
| Remote register (RWw) | Station number 1: Remote register (RWw0 to RWw3) | W1000 to W101F | Set W1000 to remote register (RWw) refresh device. |
| | Station number 2: Remote register (RWw0 to RWw3) | W1020 to W103F | |
| Link special relay (SB) | Link special relay of master station (SB0 to SB01FF) | SB0 to SB01FF | Set SB0 to link special relay (SB) refresh device. |
| Link special register (SW) | Link special register of master station (SW0 to SW01FF) | SW0 to SW01FF | Set SW0 to link special register (SW) refresh device. |
| Items of sending data | Sending data for monitoring | D0 to D31 | Items are mentioned in section 9.1(2). |
| Error code | For station number 1: | D1000 to D1031 | |
| | For station number 2: | D1050 to D1081 | |
| Station error | For station number 1: | M0 | 0: Normal 1: Data link error occurred |
| | For station number 2: | M1 | |
| Check of setting completion flag | For station number 1: | M100 | To check the OFF. |
| | For station number 2: | M200 | |
| Check of setting flag | For station number 1: | M101 | |
| | For station number 2: | M201 | |
| Monitor start | Monitor start for station number 1 | M110 | |
| | Monitor start for station number 2 (Circuit 1) | M210 | |
| | Monitor start for station number 2 (Circuit 1) | M211 | |
| | Monitor start for station number 2 (Circuit 2) | M212 | |
| | Monitor start for station number 2 (Circuit 3) | M213 | |
| | Monitor start for station number 2 (Circuit 4) | M214 | |
| | Monitor start for station number 2 (Circuit 5) | M215 | |
| | Monitor start for station number 2 (Circuit 6) | M216 | |
| | Monitor start for station number 2 (Circuit 7) | M217 | |

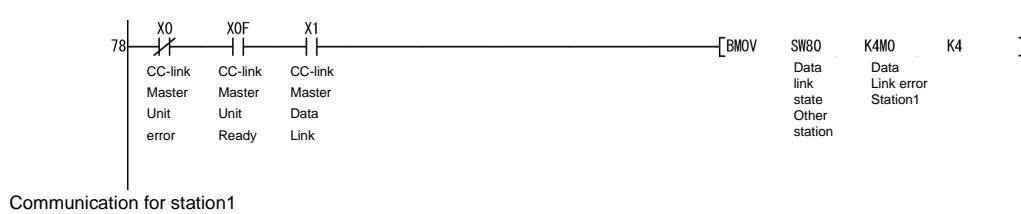

| Items | Contents | Device No. | Note |
|-------------------------|-------------------------------------------------------------|------------|------|
| Receive start | Monitor start for station number 1 | M120 | |
| | Monitor start for station number 2 (Circuit 1) | M220 | |

(1) Sample program

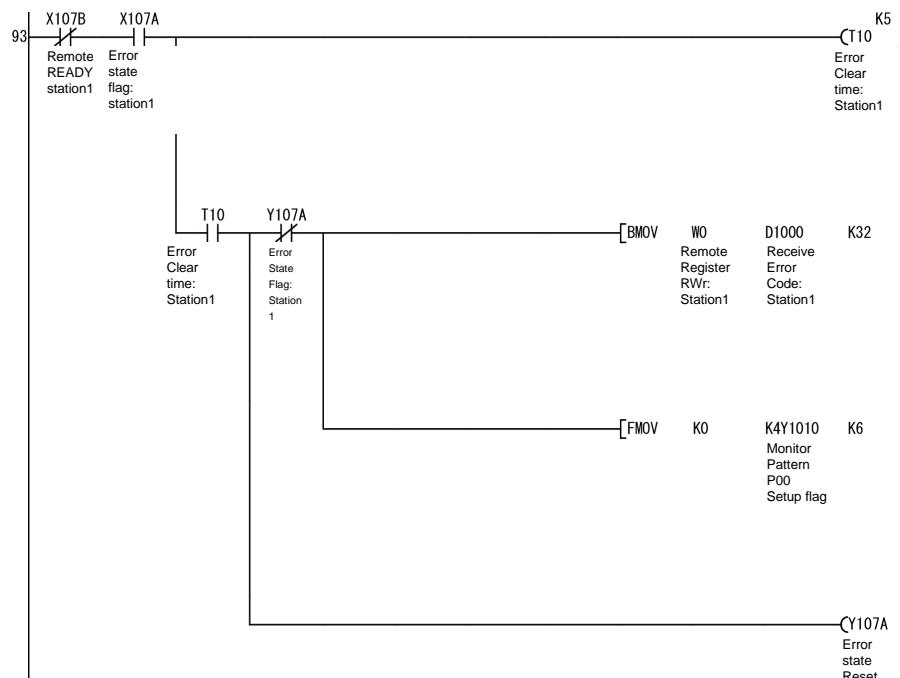

Detect data link error of measuring unit

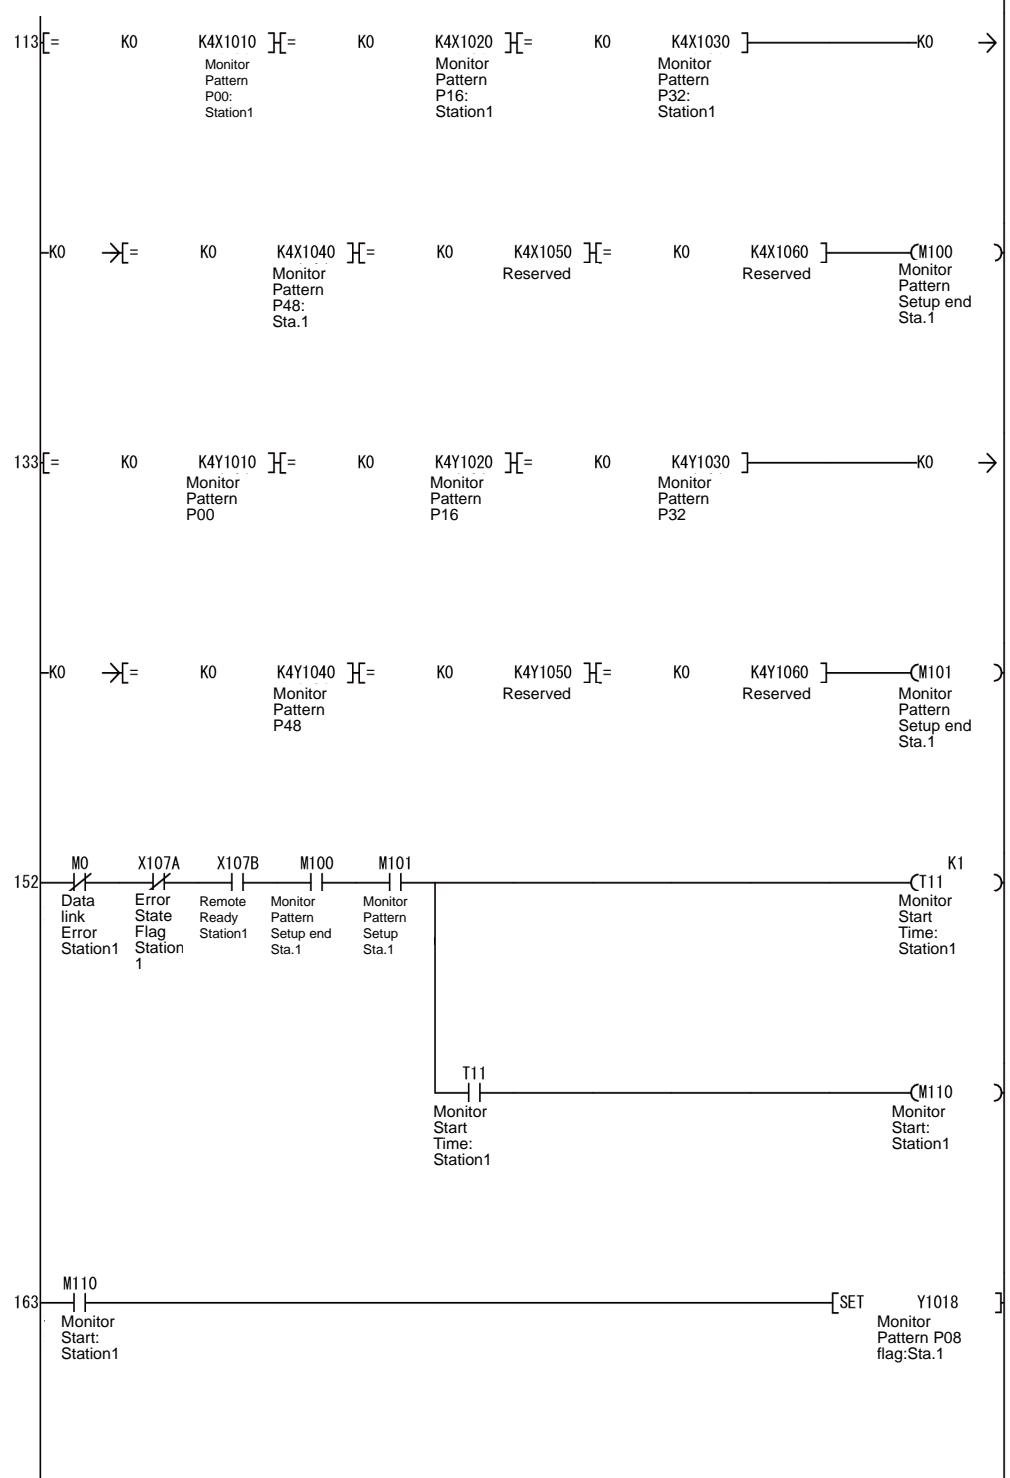

Initial communication: station1

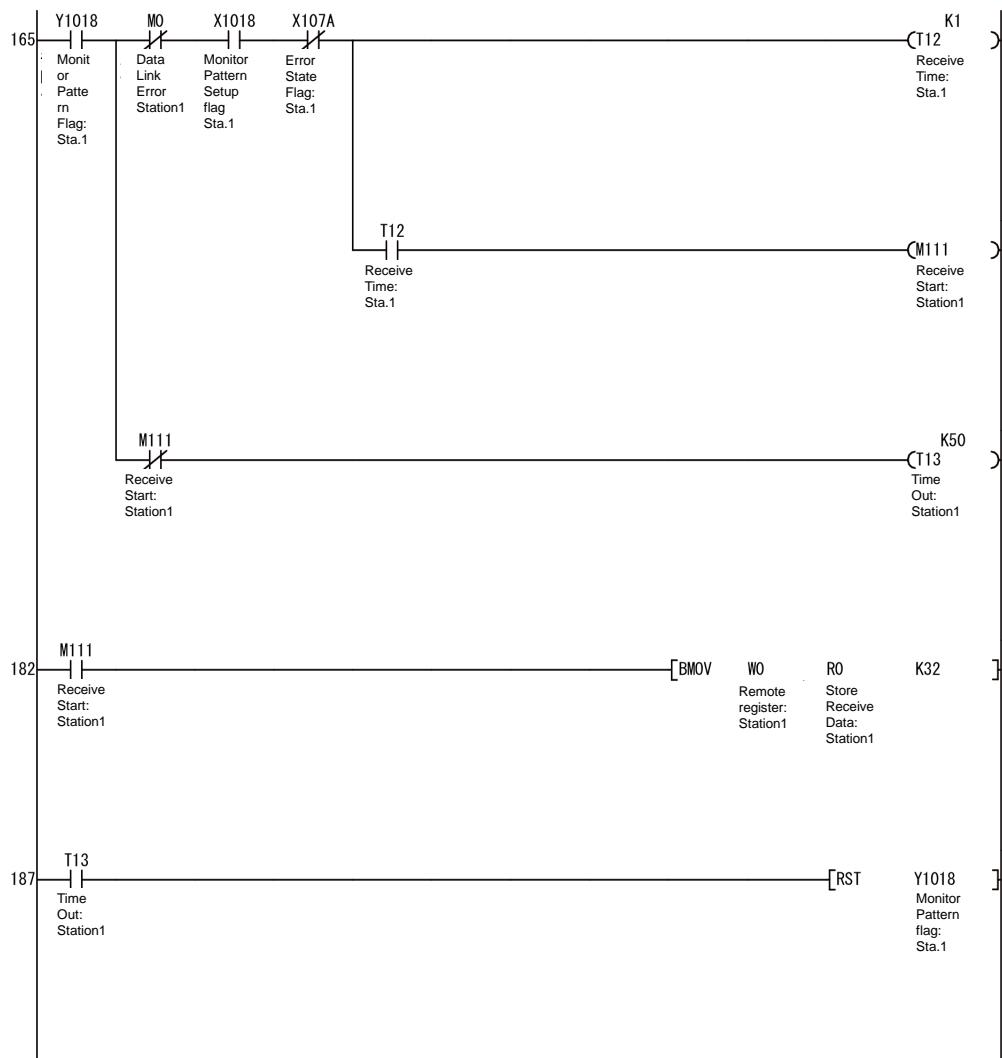

Error communication: station1

Normal communication: Station1

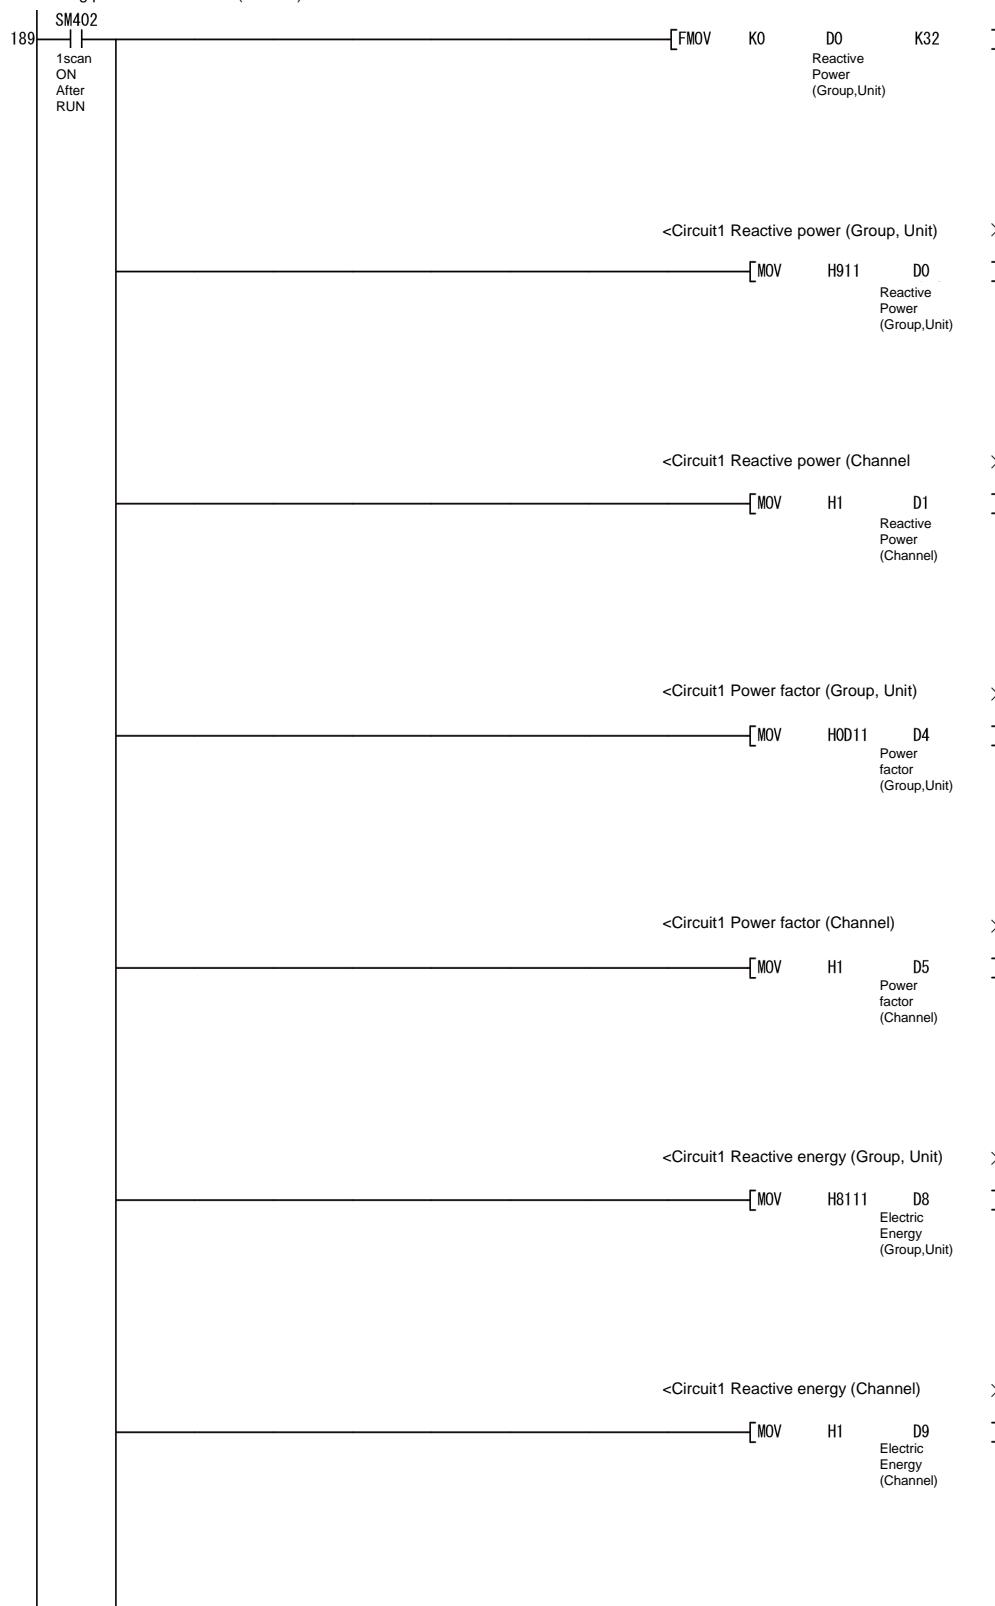

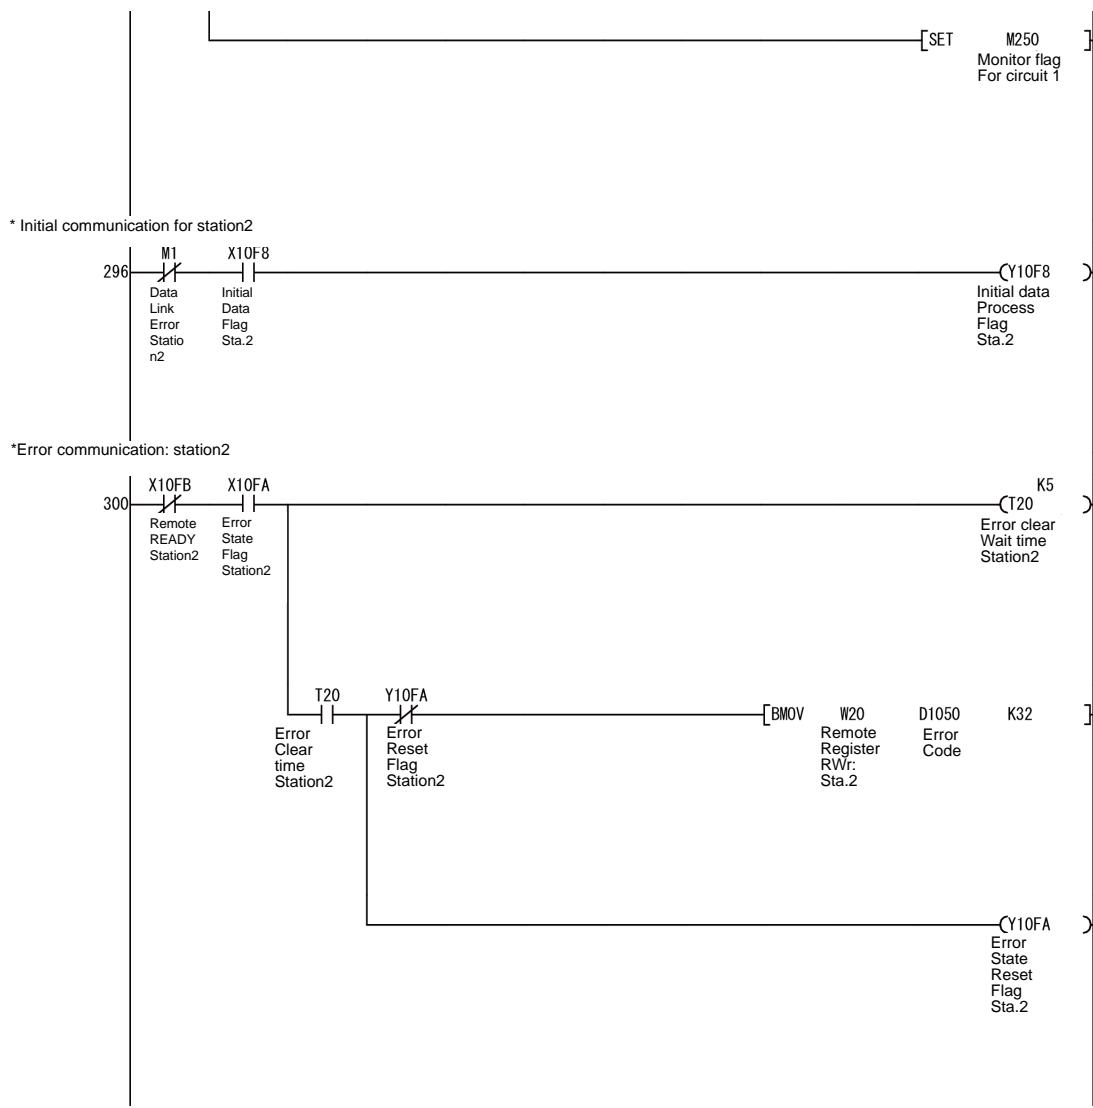

(151/167)

LEN160316C

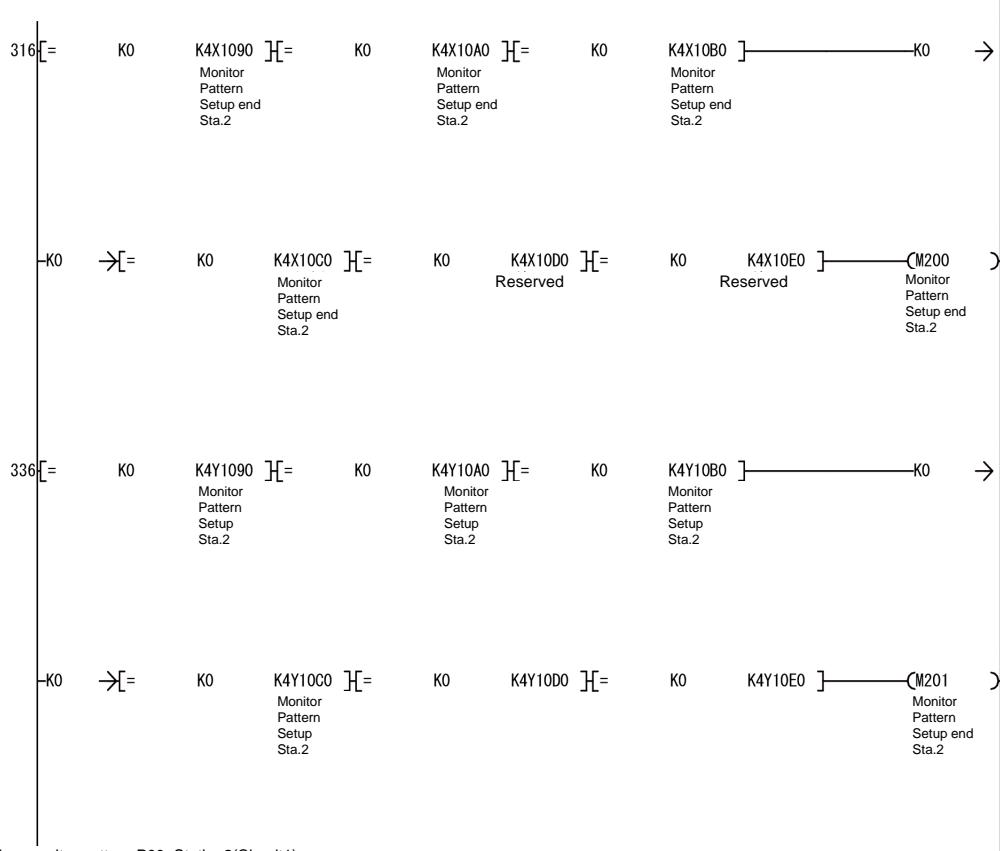

Communication for station2

Setup for send data using pattern monitor P00 (Circuit1)

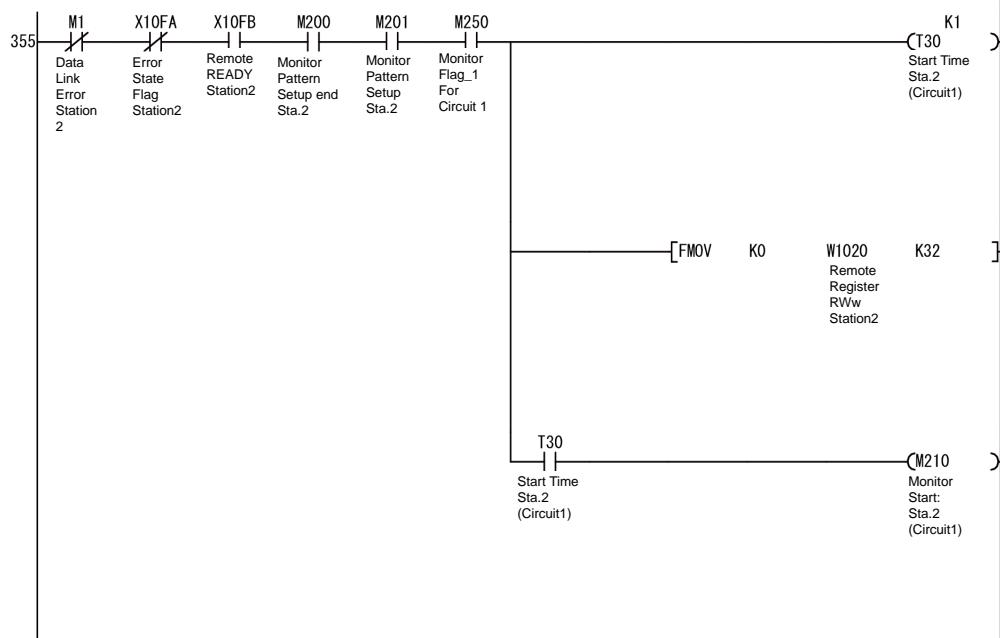

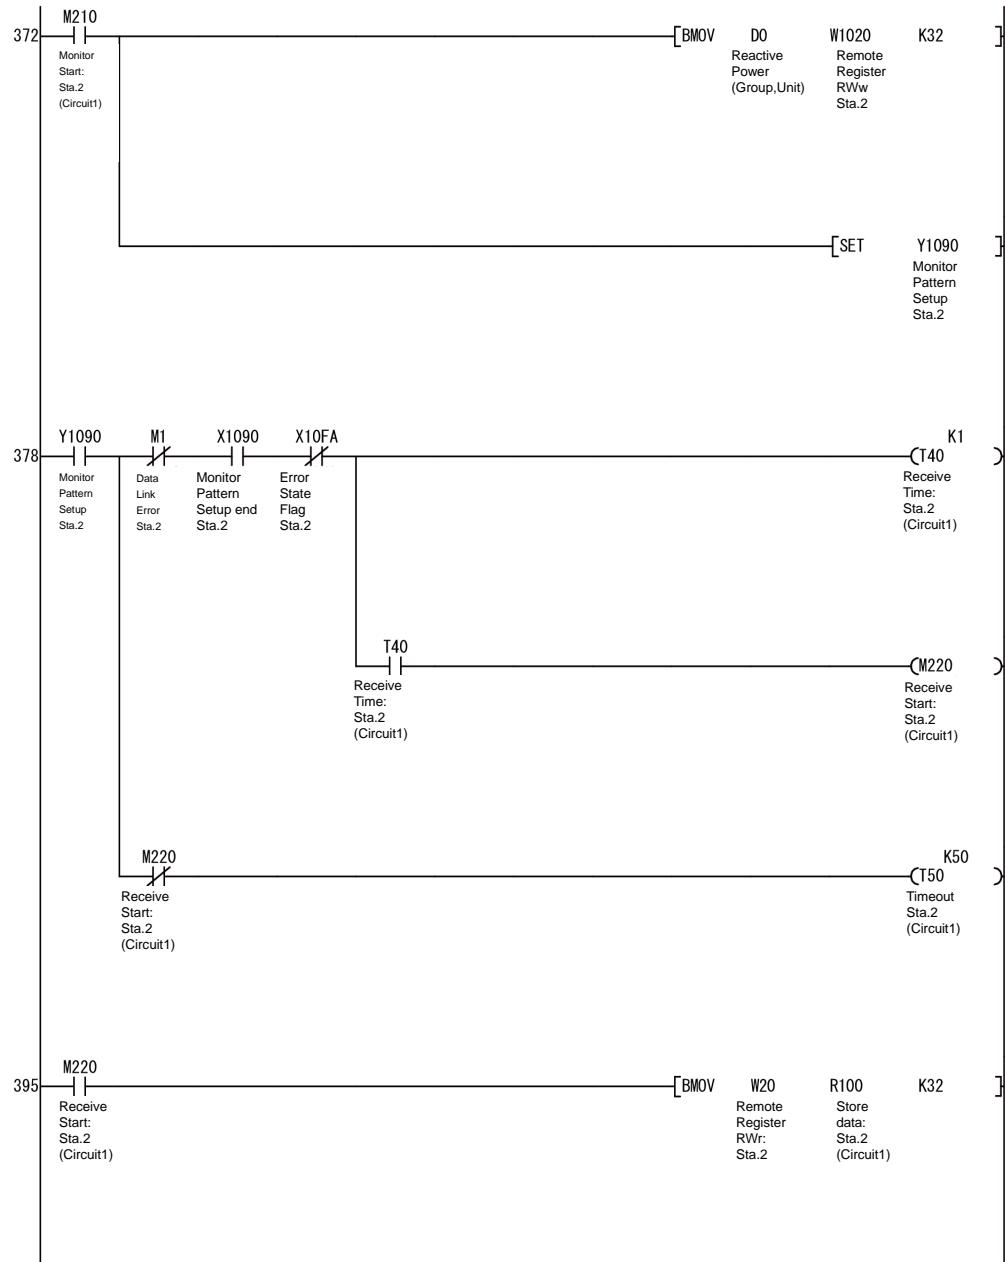

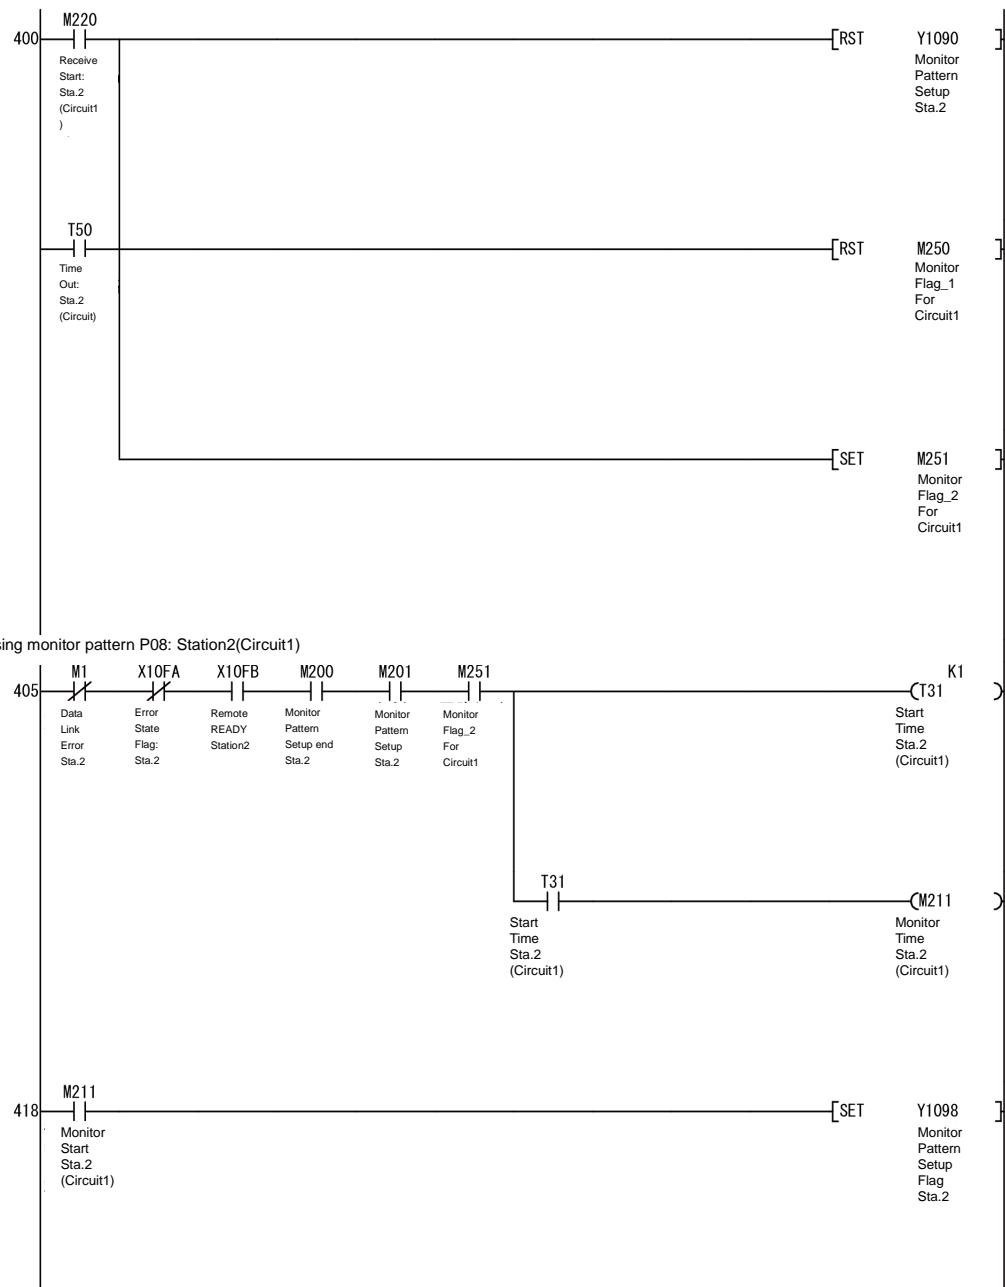

*Normal communication for station2

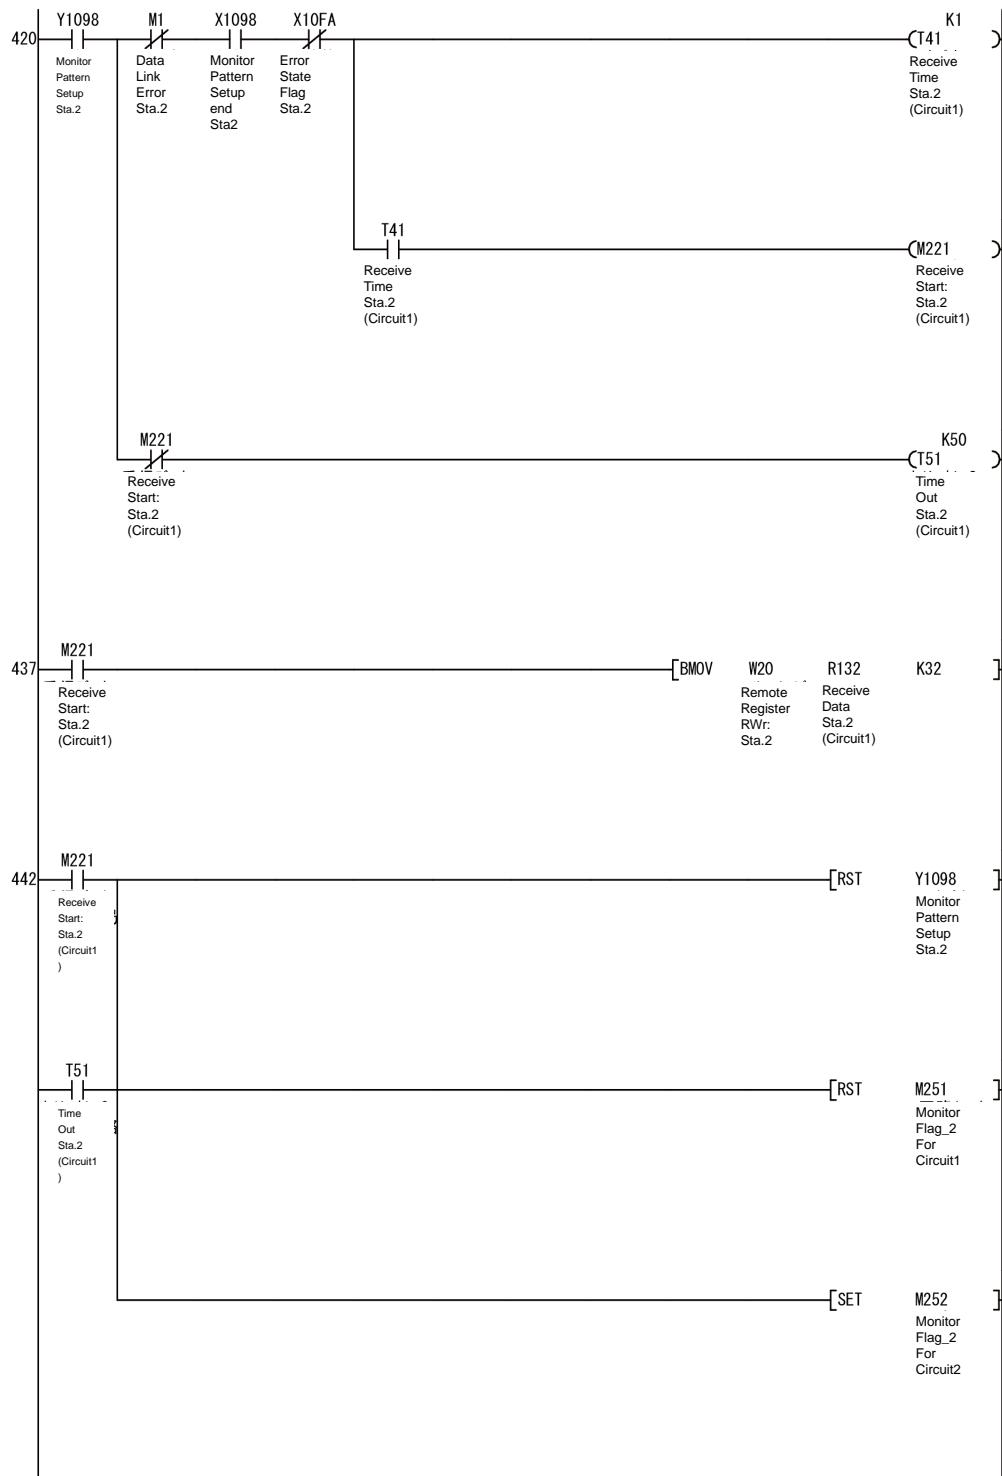

* Monitor using monitor pattern P00: Station2(Circuit1)

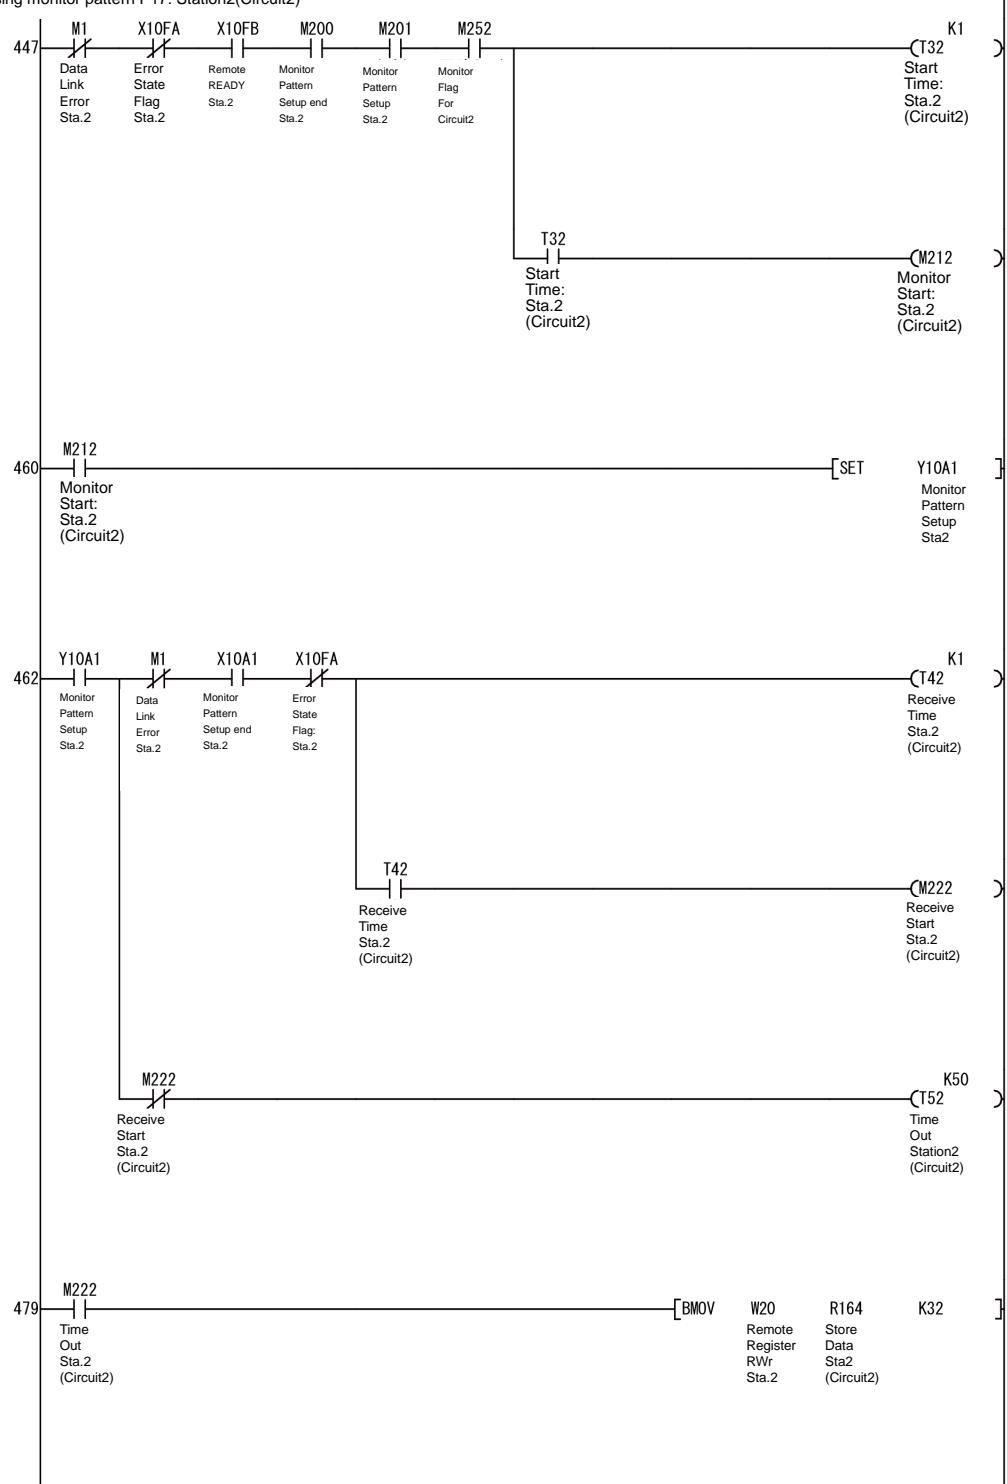

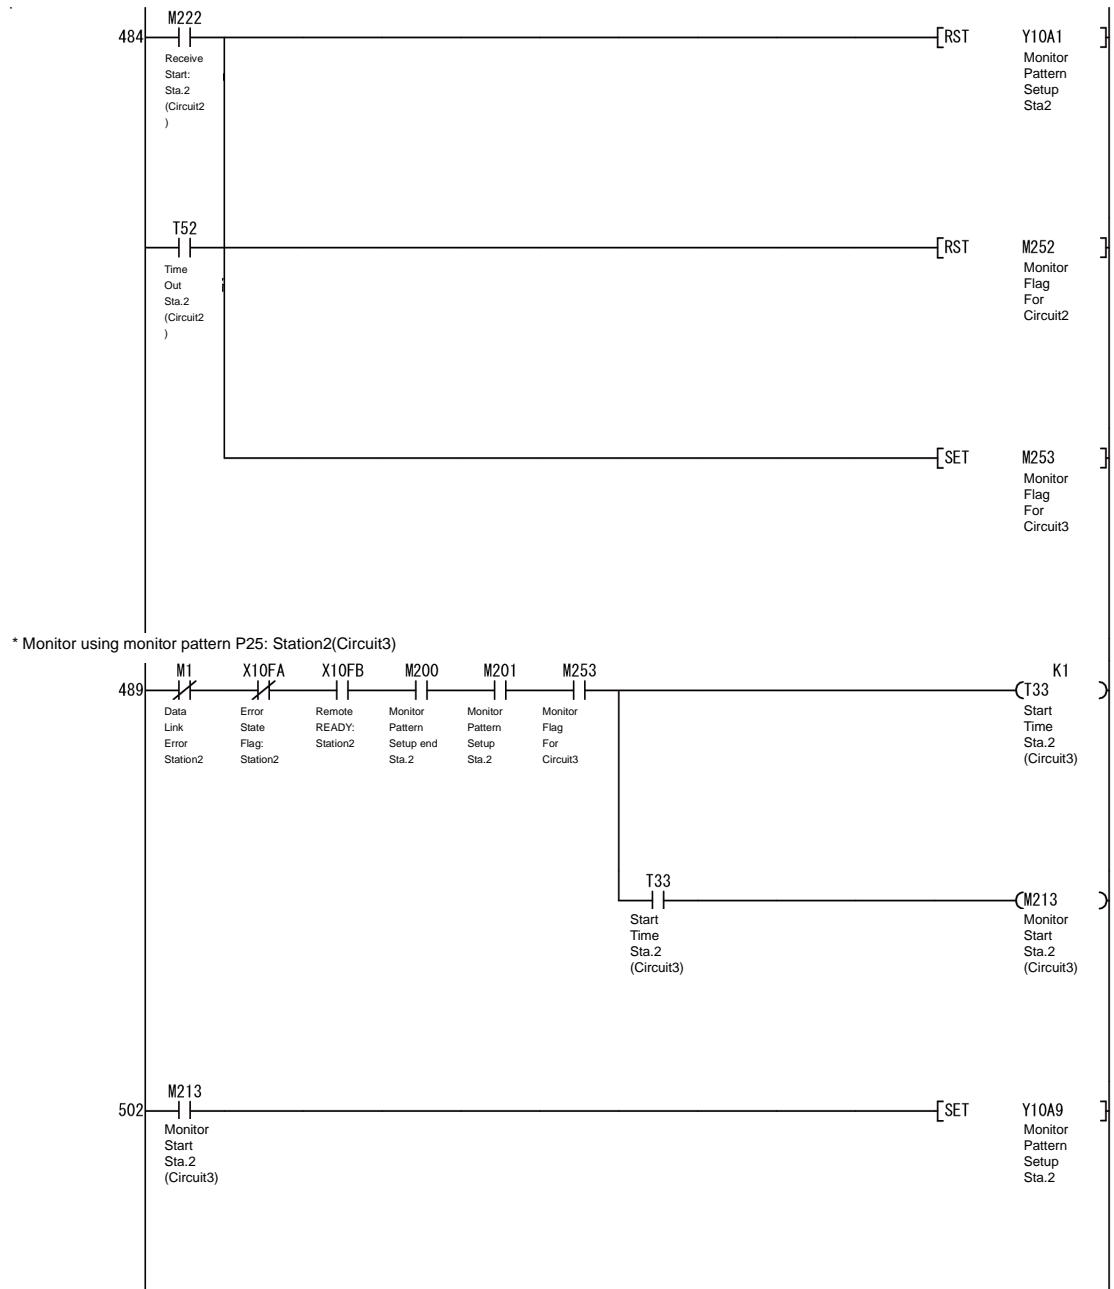

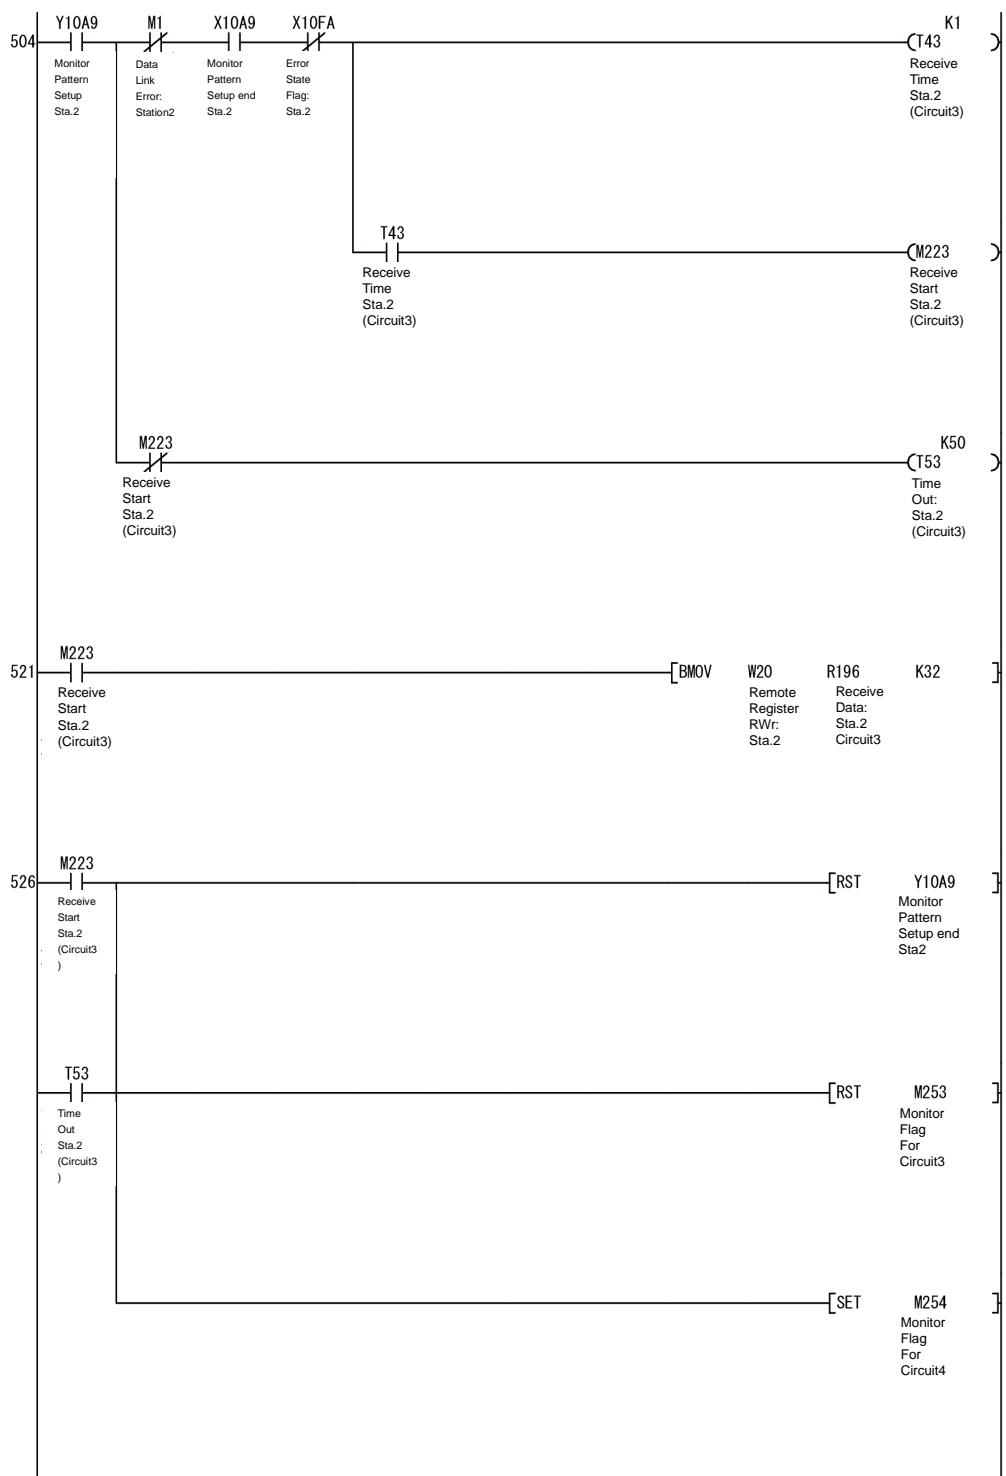

(157/167)

LEN160316C

* Monitor using monitor pattern P17: Station2(Circuit2)

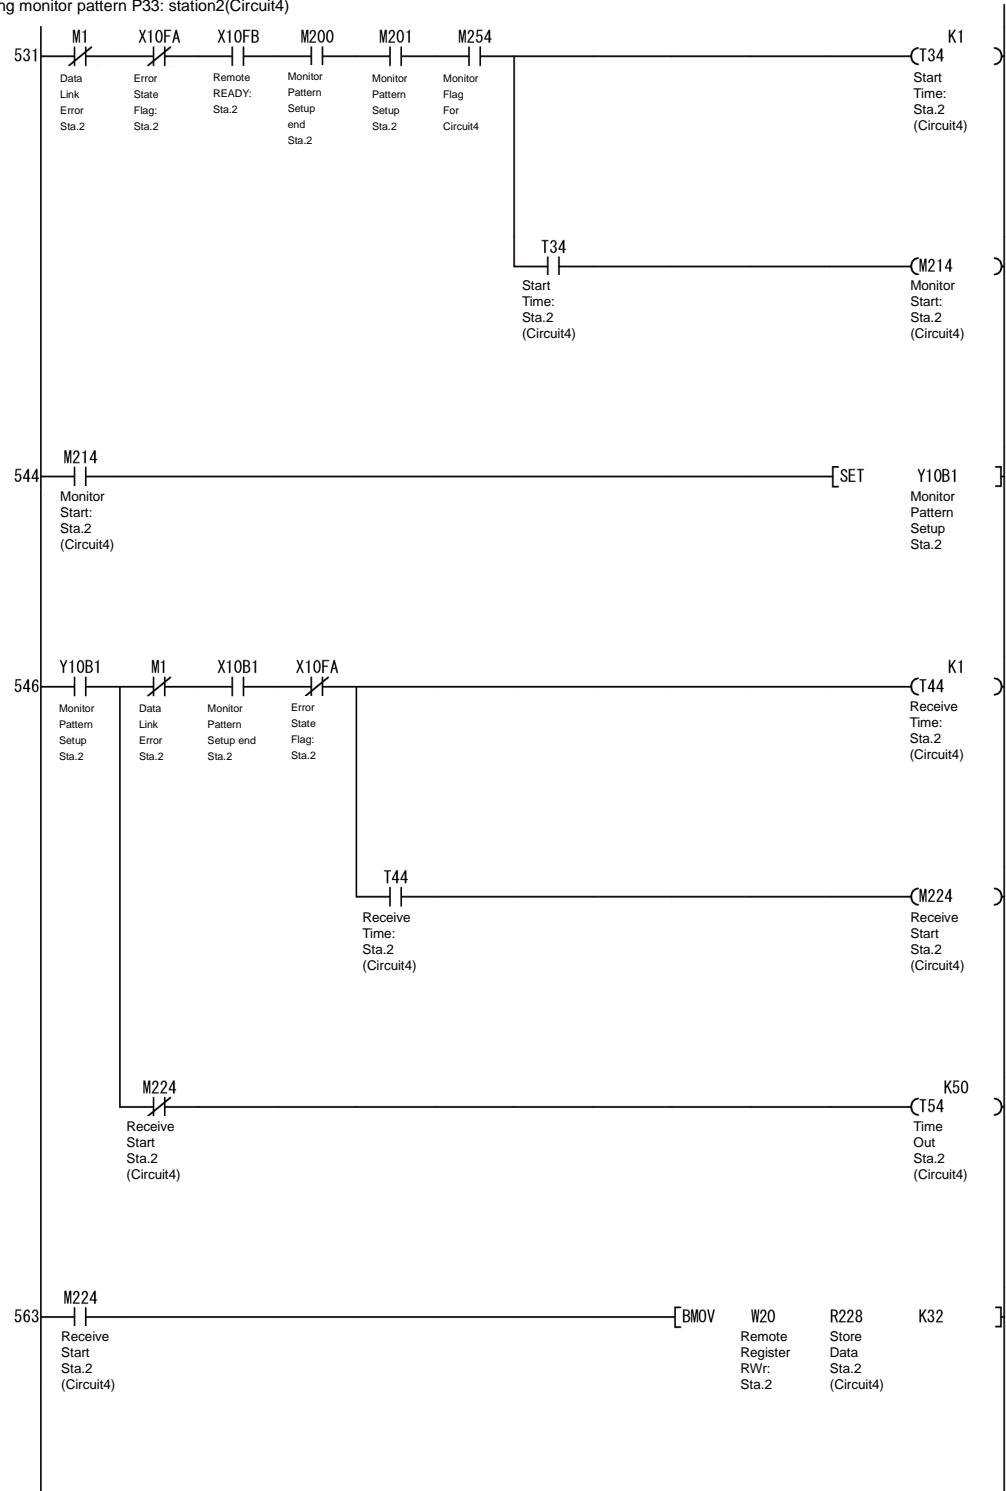

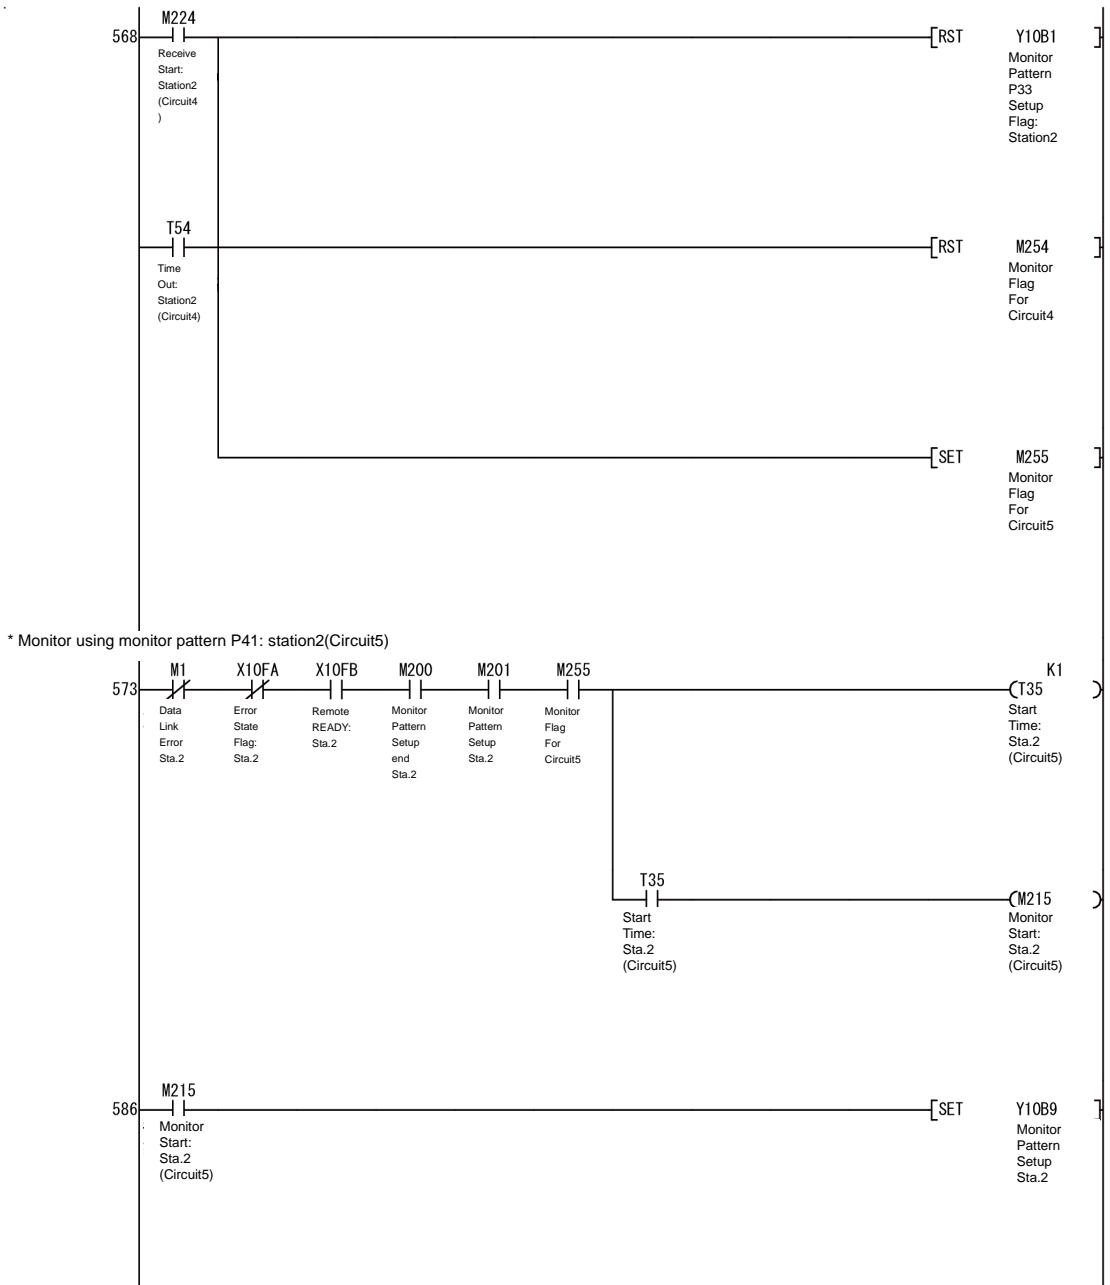

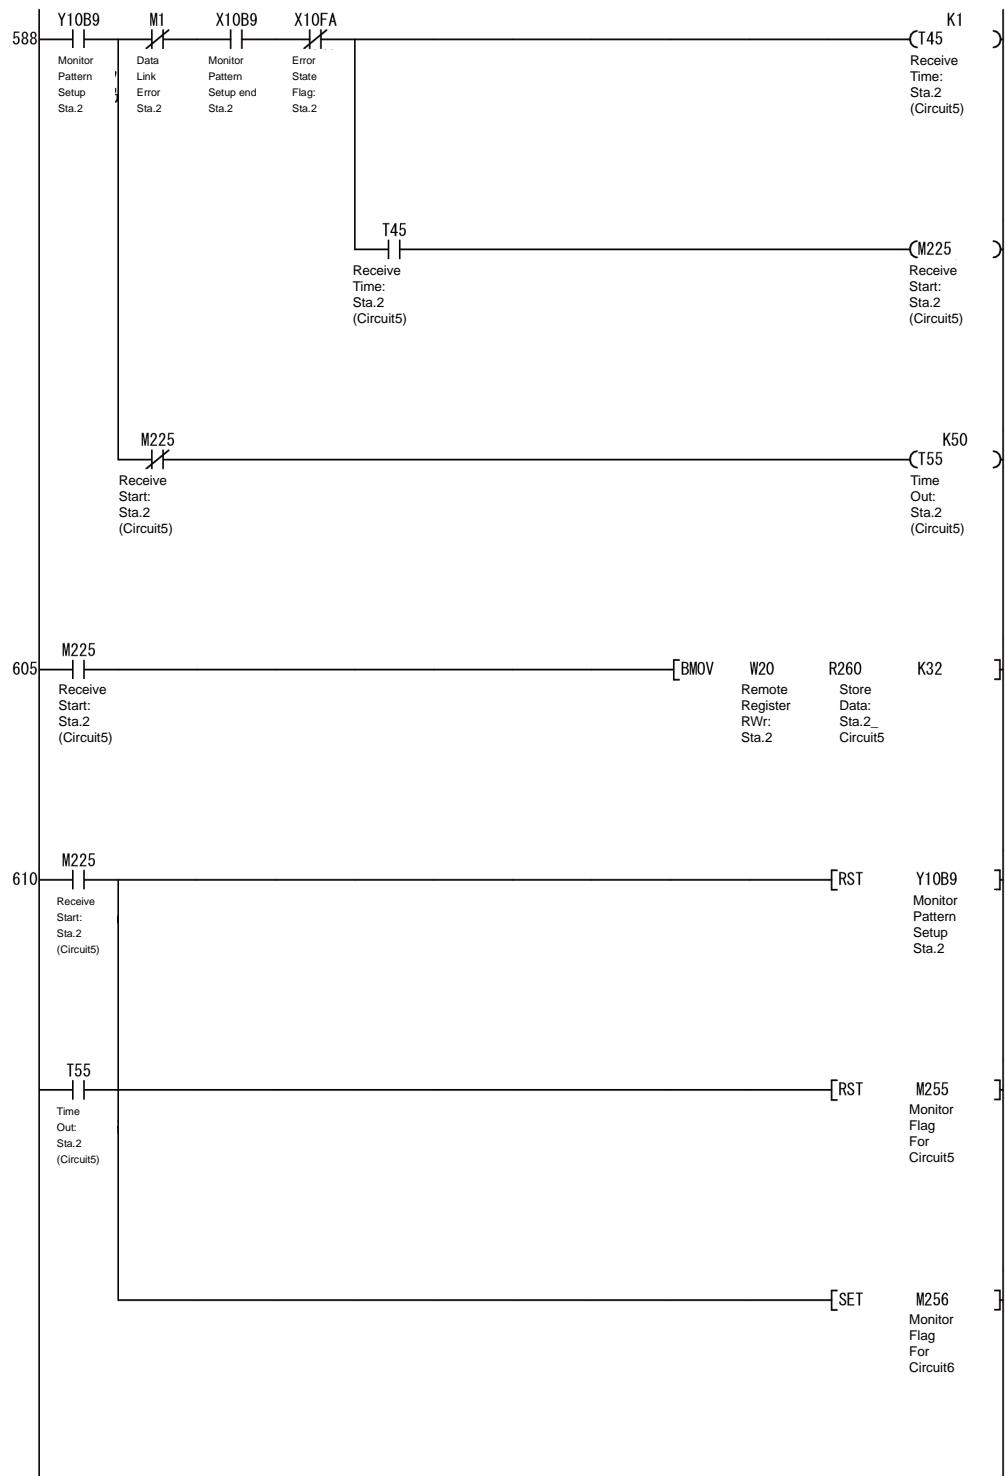

(160/167)

LEN160316C

* Monitor using monitor pattern P33: station2(Circuit4)

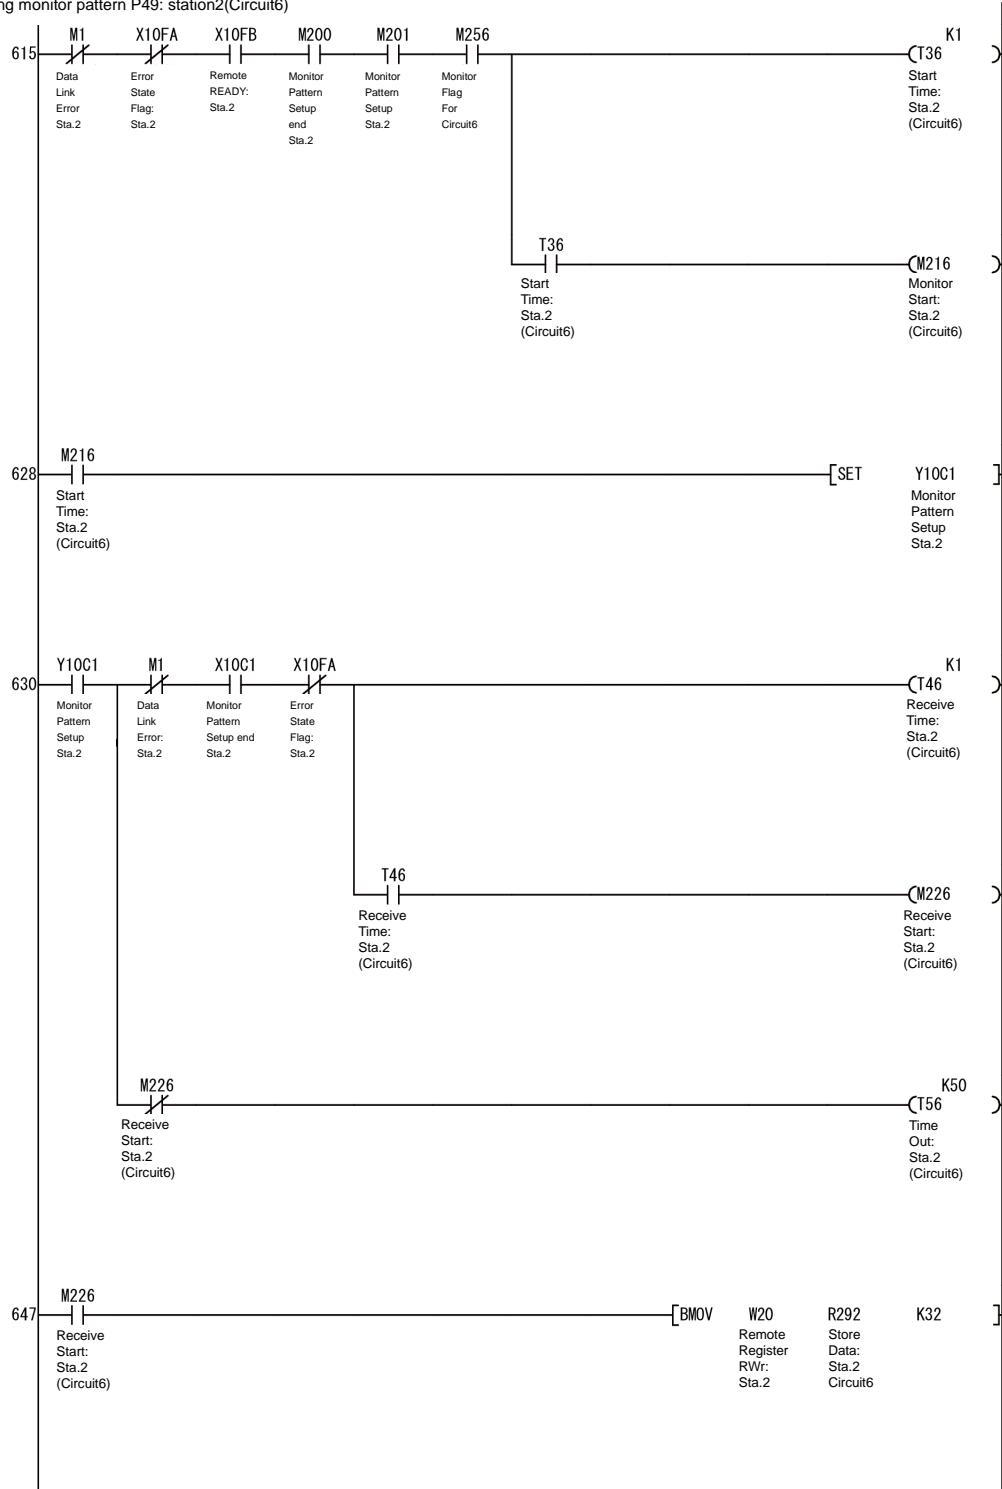

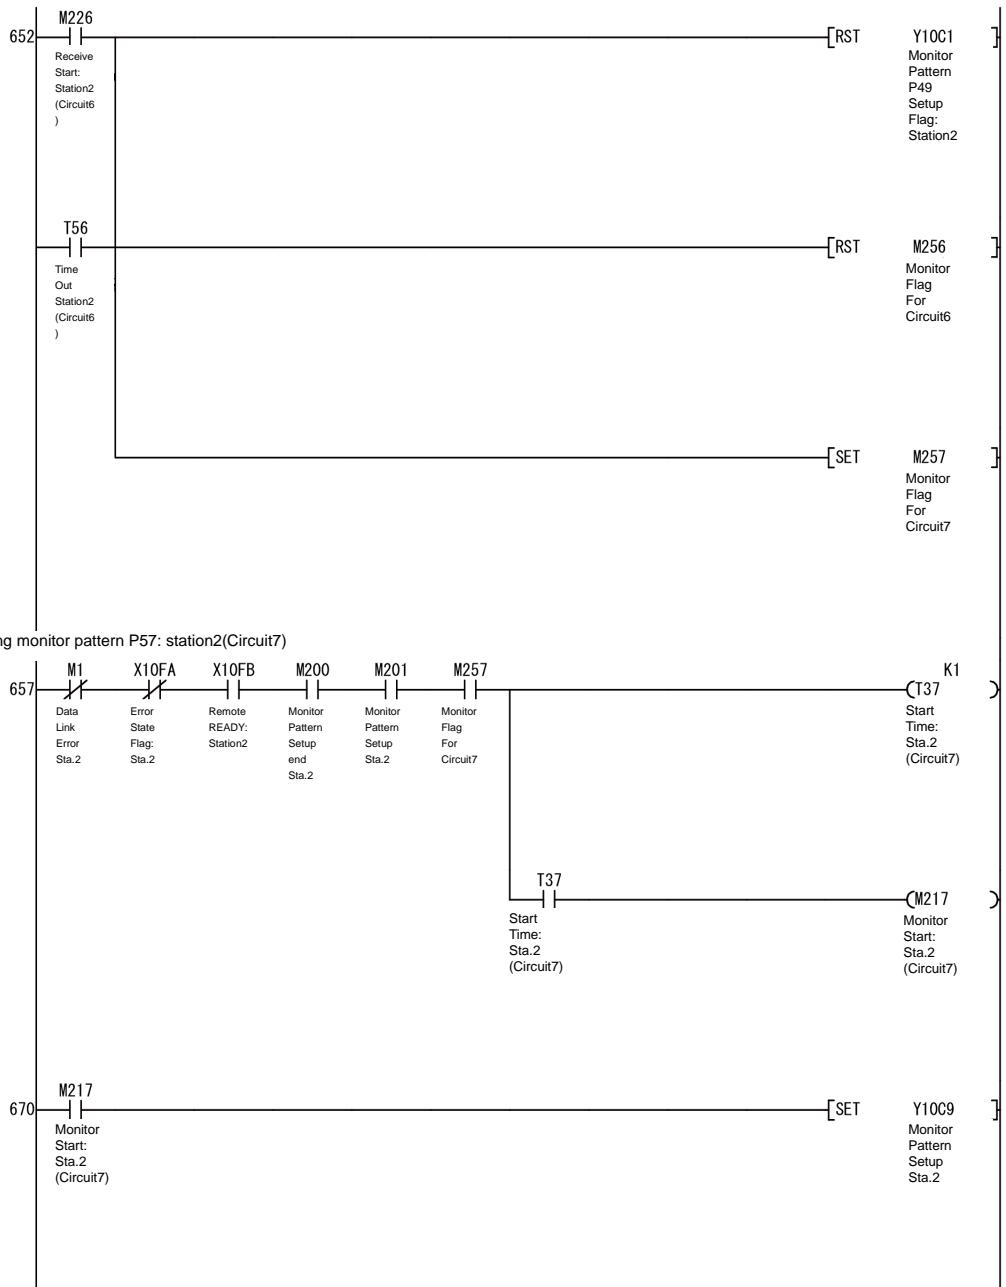

(163/167)

LEN160316C

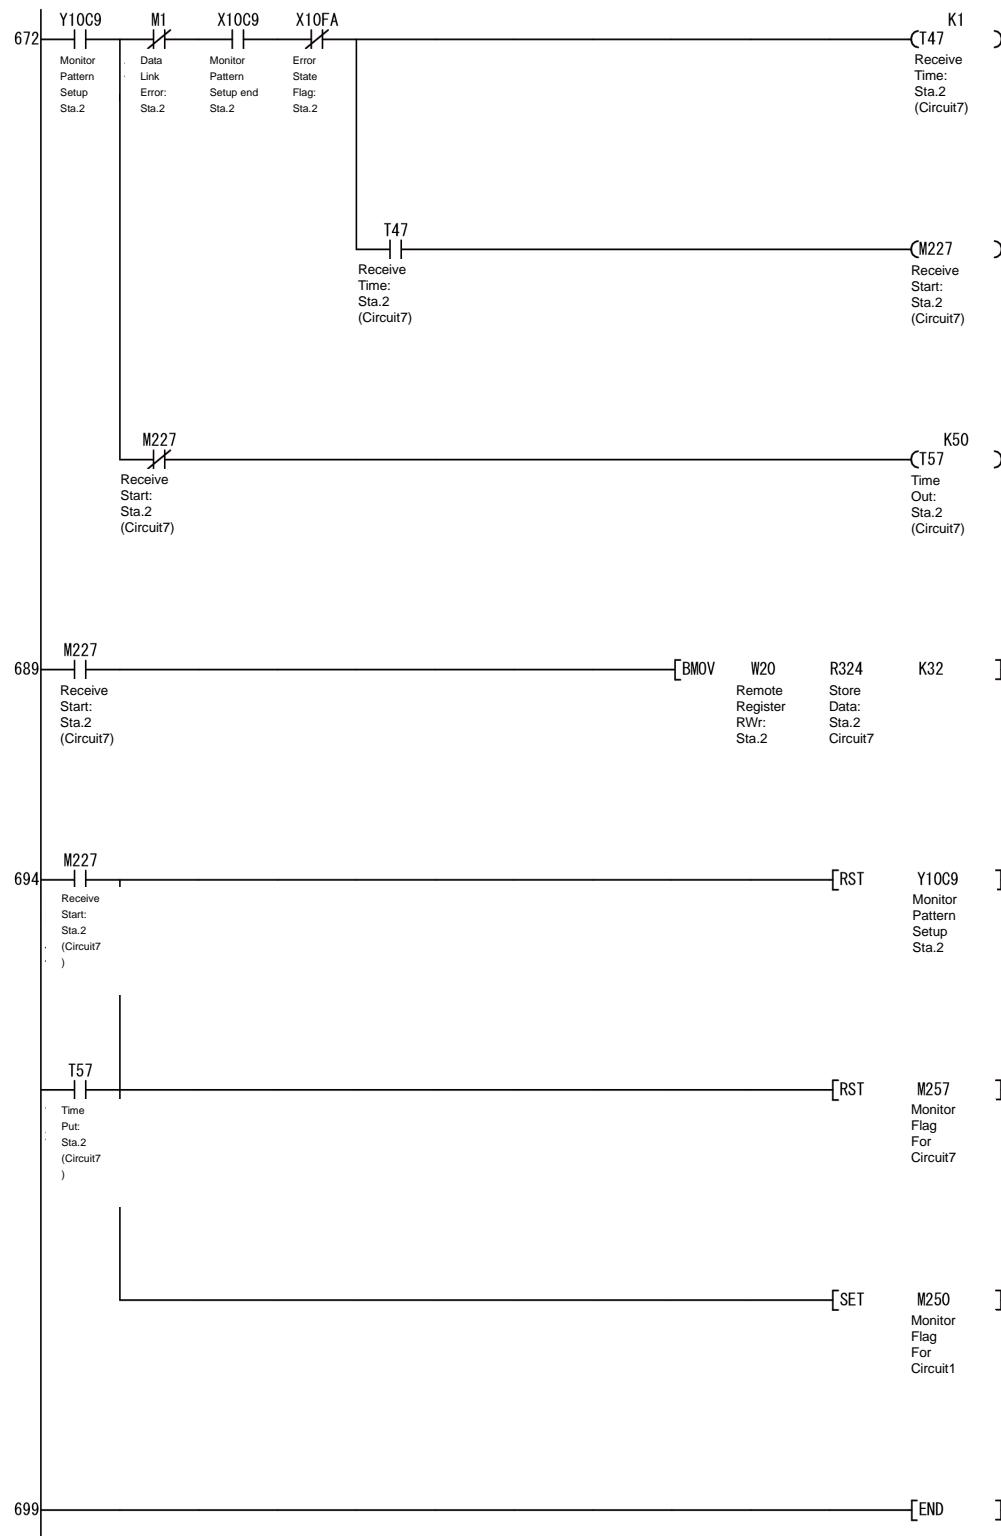

* Monitor using monitor pattern P49: station2(Circuit6)

(165/167)

LEN160316C

(166/167)

LEN160316C

10. Test Mode

Measuring Unit (EMU4-BD1-MB, EMU4-HD1-MB, EMU4-BD1A-MB, EMU4-HD1A-MB, EMU4-BM1-MB, EMU4-HM1-MB, EMU4-LG1-MB, EMU4-CNT-MB) has the test mode which the fixed values are replied even if the voltage and current are not input. It can be used to check the communication to programmable controller.

10.1 How to Test

To do the test, it is necessary to operate the Measuring Unit.

About how to use the test mode, refer to the each instrument manual of Measuring Unit.
